What equipment are you using to make the IP2 and IP3 measurements?

Can you share the comparison data you took on the units?

Good evening, pirate DXers!

The Crystal Ship is taking to the airwaves this evening, in our first test
of Valiants running on parallel frequencies:

(approx)
6,875 kHz, most likely audible in the deep south and west, and
3,275 kHz for those nearer the Great Lakes and northeast.

Broadcast commencing around 0045 UTC.

> bad RFI is, but at that there is very little I can hear on a AOR7030+,
> R8B, or a R2000.

Yes, it's very quiet here in the Pacific NW, with the fewest "thunderstorm days" of any place in the continental USA. In mid-winter, with a Western Beverage antenna at dawn, aimed out over the Pacific Ocean, you'd swear your receiver was defective, or the antenna broken. In these conditions, extremely faint tropical band and foreign (TP) mediumwave signals have a fighting chance to be heard (assuming a top-notch, low noise receiver like a AR7030 or my current fave, the SDR-1000.

It was under these mid-winter, dawn enhancement conditions that I heard tantalizing faint signals around 3174 kHz (variable) in the late 1990s, which had all the clues of Indonesian "amatir" stations. Think: Indo college kids back home on holiday or weekend breaks, playing non-stop Indo rock music with flea-powered transmitters, no IDs, often distorted audio, no official "RRI" news at the top of the hour, etc. I've heard enough of the real RRI and RPD Indonesian stations to recognize the Indo amatir (pirate) station. Similarly, I've logged very low power Australian x-band stations such as Radio Brisvaani, the Hindi station on 1701 kHz (Brisbane, Queensland). I'd never have a chance to hear this sort of DX, however, at home in the suburban RF jungle near Seattle-Tacoma. These catches were on coastal DXpeditions, under ideal conditions.

I do have pretty low noise levels of the RFI, hash-and-buzz sort at home, due to the underground AC mains. The main problem are the dozen or so MW stations registering S-9+40 to S-9+60 dB on the SDR's (calibrated) signal meter. My local 1 kw'er, 1450 KSUH in Puyallup, is a bit over 1 mile from home. When I had a 700 ft. Beverage antenna aimed at my Asian targets, the antenna unfortunately was oriented right at KSUH, too. The signal on 1450 from that antenna registered -13 dBm, which is, I believe, around S-9+65 dB. This is an example of what the trans-Pacific MW stations need to fight through to be heard in a suburban location like this. So far, I'm finding the Wellbrook ALA 100 on a rotator does just fine for snagging the foreign MW DX that makes it through the RF jungle; a Beverage is no advantage.

73,

Guy Atkins

Sorry about the multiple posts. I still have not seen but one of my posts show up here. Not sure what's behind that.

S350 a close match to the Sat 800? The S350 I had was the driftiest radio I have ever laid my hands on. Maybe you have a good one.

Guy is so right about the joys of DXing in a very low noise environment, such as the Pacific coast Grayland site. I takes a lot of research and running around to find an "ideal" low noise DX site and on our crowded planet they become harder and harder to find.

I found such a site in a remote part of our Atlantic coast,Seefontein, miles from the nearest town and miles from the nearest powerline. It's just bliss to have that phenomena that Guy describes: when the noise on the antenna's is so low you start checking to see if in fact they are connected. It is such a joy to hear stations thousand's of miles away waft in over the airwaves as clear as a bell, yet the signal strength is so low it doesn't even move your "S" meter. What a thrill!

That's why some of us serious DXer's travel long distances with considerable effort in time and money to enjoy these most favourable DX conditions.

Try it = you'll love it.....

I didn't do the tests, a graduate (PHD) engineering student I know ran
the tests for me.
I will ask for the exact equipment used.As for the exact data that will
take a while, my
"ham shack", communicaitons room radio room is packed in boxes for the
renovation.

I know the people at a local EMI certification lab, full screen room
etc, and I am hoping
to run some tests on all of my active antenna, the "soon" to be
completed WL1030 and the
1530.

> The Sat 800.

The 800 *is* a great radio - probably the best voice program listening
shortwave radio ever made. It's music performance on FM is not so hot
due to the relatively small speaker size, and the bass control has
little effect. The Sat 650 - which I also have - sounds *much* better
on FM, but unfortunately it's a mediocre performer on shortwave.

This radio was obviously made for voice, which it excels at. The Sync
is outstanding, and the filters are right out of the R8 - which I also
have.

I have loads of radios, but the 800 remains my "reference" radio.
Sometimes my Sat 2100 all analog radio gets a better signal than the
800, even though they are side by side on the table. It also has a
warmer, "tube like" sound even though it is not a tube set.

The filters in the 800 are not "right out of the R8". The Sat 800 has a 455 kHz 2nd IF while the R8 uses 50 kHz. The Sat 800 uses ceramic filter while the R8 uses LC filters.

The designers may have chosen to use the same bandwidths, but the filters are not the same.

I'm also thinking of picking one of these up. My RS only has the metal
ones (M300PE). I have a Mini 100, great radio but that analog dial on
it is tiny so this'll be a nice upgrade. I also own a Kaito 1103,
which I think I may sell before I have QC issues, and It's too big to
carry around anyway. 's why I like the grundig mini's, they're shirt
pocketable. I only wished the mini 300's had lighted displays but hey,
gotta keep the price down and lights really eat batteries anyway.

Which are not filters and have nothing to do with anything.

>The Sat 800 uses ceramic filter while
> the R8 uses LC filters.
>
> The designers may have chosen to use the same bandwidths, but the filters

Since the R8/SW8/S800 were designed by the same people (Drake), the
bandwidth filters are the same. That's what I was talking about.

Quoting from Shakespeare, "let me count the ways" that Bo Gritz is different (and consequently better) than Chuck Harder:

1) Chuck Harder believes in flying saucers; Bo Gritz does not.

2) Chuck Harder did not serve his country; Bo Gritz did.

3) Chuck Harder has yet to publish his first book; Bo Gritz has written two (that I know of).

4) Chuck Harder has not put his life on the line for anything or anybody; Bo Gritz has.

I am not a fan of Bo Gritz, but in my opinion he has much more credibility than Chuck Harder. Ditto anti-"New World Order" crusader Jack McLamb, who was a Phoenix, AZ police officer, if my memory serves (whatever happened to this guy?)

So what has Chuck Harder done? Well, he's been a pain in the "tuches" for folks trying to run businesses in the Tampa, FL area in the 1970's and 1980's. He's pushed his goofy anti-government conspiracy theories (including the aforementioned flying saucer tales); he's not taken good care of himself, despite his ad nauseaum maunderings about medical conspiracies against the American people; he dissed the UAW when the union endorsed Bill Clinton in 1996, thereby throwing away his only true support base.

What a guy!

Any chance of you posting medium and tight close ups of the DA100Es?

A friend in Flagstaff is dealing with (fighting) overly restrictive
condo rules
and I sent him the photo of the Wellbrook. He may be able to sneak, as
in
be granted persmission, a vertical active antenna into his backyard.

He was allowed to errect a Rat Sahck Diskcone but that makes a very
poor
HF antenna.

Thank you
Terry

Especially, if the price is adequate.
These are all the "buttons" that other people push to attract our attention before they start speaking to us. When I asked her what it was about she told me that it's a meta-reminder.
Seemingly, by "simplifying" our lives we actually make them more difficult!
Could someone please explain to me what's it all about?
I even have a couple of drawers with unmarked hangers and labeled files in them.
Do you know what it does?
But I never ran this route before and it goes through the park with no trails visible on any map, so my estimate was off by about a mile. How do we avoid this downward spiral?
In GTalk world your screen name is your GMail email address, so you'll know how to find me.
It is pathetic when a grown man, stranded in the bushes, cannot open a can without a can-opener.
Feeds require a radically different approach.
If anything breaks, let's hope it's temporary.
Perhaps, Thomas, you just need a better Tablet PC?
Heck, maybe it's just a modification of iTunes.
Next time I run there, I will put on pants instead of shorts. We want to make sure that our newly developed ways of dealing with those challenges are simple enough to be easily reproduced.
These are all the "buttons" that other people push to attract our attention before they start speaking to us. And see you on GTalk!
Simple, decentralized and doesn't require any new code to be written other than to put a few existing things together.
And I want to be able to manage with just my fingers in most cases. It is still way slower than my QWERTY typing, but I am slowly getting there.
I find TeX to be easier than Word, how about that! It is still way slower than my QWERTY typing, but I am slowly getting there.
At the post office they would just fetch your current mailing address and route the correspondence accordingly.
But I'll make an announcement in a week or so. But I'll make an announcement in a week or so.
There's only that much you can convey with words, boxes and arrows. We sure know how to procreate! Does it make me think harder?
Of course, the problem is, she still could not remember it when the alarm went off, so it's really not a very effective innovation, but still it's quite funny. Make your stuff better and you won't have to compete with "free".
I even have a couple of drawers with unmarked hangers and labeled files

in them. Whereas with feeds everything is about attention: I like this topic and I want to read more on it, that author is funny and I'd like to check out her other blogs, etc.

It seems to totally exclude the possibility that this particle belt
they wish to diminish on an ad-hoc basis also contributes to protection
of life on earth from the hazards of extraterrestrial radiation, which
are considerable.

With my RS model 12-898 AM/FM PLL, I can pick up 1040 WHO, 870 WWL, and
stations in Canada from Maryland, up to 1,000 miles - same as the
Grundig S350. Actually, I found the wide/narrow filter on the S350
annoying, as it only muffled the sound. The S350's RF Gain switch could
always be left in the max position, so it served the same purpose as
the DX/LOC switch on my RS radio. Too much hype ! :)

Unfortunately, I was VERY disappointed in the over-hyped S350 - I
thought the quality of construction was VERY poor. I retuned it to RS
for a $25 AM/FM PLL model 12-898, that performs just as well. :-(

>
But there is more to a filter than bandwidth. You can have a nice
narrow filter that turns out to be lousy, because it has no sharp
skirts. So it broadens out really fast, and lets lots of adjacent
signal in, unless it's terribly weak.

"Selectivity" is often easy to get, but the shape factor is what
separates the quality filters from the rest.

Comparing bandwidths often doesn't mean anything.

And the frequency of the IF may indeed be a factor. Not maybe
in itself, but in the design that goes with it.

The previous poster is implying that the ceramic filters at 455KHz
may be relatively run of the mill, that whatever the stated selectivity
the skirts aren't sharp. Dropping to 50KHz has always allowed Drake
to make filters out of coils and capacitors, and that provides more
leeway in design. They aren't picking some premade filter out of
a catalog.

It's not really an issue of IF frequency, but it's easier to make
good LC filters at 50KHz than 455KHz, which makes sense since it's
a lower frequency. But it is the type of filter that matters. If
the Satellite used a Collins mechanical filter at 455KHz, paying
the premium for a premium filter, the shape factor is far better
than the average ceramic filter, and could beat out the Drake's
50KHz filter.

I have no expectation that BPL works well for anyone, except for the people who are selling BPL. For all I know, it's marketed by the same bunch of people who used to make all those gas saving gadgets sold in the JC Whitney catalog. RUN YOUR BROADBAND WITHOUT SHIELDING!! Somebody's making money off BPL, even if there's yet no profits to be shown. And, if somebody's making money, you can bet they have friends in Washington. Also, even the honest Congressmen and bureaucrats want people to make money. Jobs are created, taxes get paid, the economy grows.

On the other hand, what congessman or bureaucrat would dare take a stand against BPL? They'd get labeled a lackey of the current broadband insiders. They'd be accused of trying to keep broadband choice away form Millions of Deserving Americans.

The only politically safe way to show BPL is a failure is to let it fail. The decision won't be based on anything like a clear headed consideration of technology and standards.

Of course, it would be different if there were a considerable number of radio hobbyists. Because this is a political decision, not a technical one.

Right. The first two which come to mind are the military and the airlines.
I expect the interference problem can be minimized by banning BPL from
certain areas. And I'm also sure that interference complaints from either
of those orginizations will be taken much more seriously than complaints
from the ARRL.

>
> > And there might not be enough of us to make them care.

It's been suggested here that oversight of the public access parts of the
radio spectrum be taken from the FCC and given to The National Park Service.
If the public can enjoy the resource, then they will have an incentive to
protect it.

Hello,

Lately I've got a growing collection of QSLs. The problem I've run into is all the wall hangers I've found are only up to 6"x4" (most are a little bit less). The majority of cards I have are 4.25 inches or less and under 6 inches. (except for CRI who for some reason likes 6.5 inch cards)

Any input on where I might find a nice plastic cases that'll display 20 or so for my wall would be welcomed. :)

Well for the measurements to be meaningful the test conditions must be
known. You must (best) know the tone frequencies and input levels along
with the output tone levels and the levels of all the intermodulation
products you want to report on.

IP2 and IP3 are specifications that are higher the better. If I'm not
confusing you with another thread I think you mean a comparison to the
ALA1530 you you writ "1530". The ALA1530 has very good specifications
and to quote this page:
<http://www.wellbrook.uk.com/ALA1530.html>

"The Broadband Loop has been specifically designed to reduce
intermodulation products to a minimum. The second order and the third
order intercept points are typically +70dBm (IP2) and +40dBm (IP3)
respectively. Thus the level of the intermodulation products are
generally below the atmospheric and man made noise."

These intermodulation numbers are huge and I don't see the point in
working to get higher numbers than these. I could say that numbers
higher than these are not important unless you sit by some transmitter
in the passband of the antenna/amplifier.

I am I off base?

That link worked.

Looking at your data I'm at a disadvantage not knowing which are radio
stations and which are computer noise other than KNOE 540 kHz you
specifically pointed out. Another problem for me is the loop antenna
gain looks to be about 10 dB less than the other antennas. While
actually not a problem for signal to noise measurements it does make the
sweep look different to a person that did not make the measurement.

Antennas in different locations around your house is not exactly apples
to apples comparison.

If your spectrum analyzer has a max hold on the trace that would be a
help in measuring the top of the noise floor.

A clear difference in S/N would be the last pair on page three 1500 to
2000 KHz where the ALA-100 looks to be 22 dB (-42 S to -60 N) compared
to the vertical 33 dB (-32 S to -65 N). One problem for me here is I
don't know what the analyzer noise floor itself is at this point and I
can see that the loop has 10 dB less gain than the other antennas.
Assuming that the analyzer noise floor is -70 dBm and lower would make

this comparison valid. A simple check of just disconnecting the cable from the analyzer at those settings would show the instrument noise floor. Using max hold would make the noise floor less ambiguous.

Due to my disadvantages noted I can't draw any firm conclusions based on the analyzer pictures.

****

I have to take exception to the wording you ascribe to other people such as myself about a "belief in magnetic field sensitive antennas". I rely on belief only when I have no other choice as a fall back to no being able to test a thesis empirically.

An electrically small shielded loop antenna will respond very poorly to a local electric induction field and very well to a magnetic one. An electrically small dipole would be just the opposite in response to induction fields. This is theoretically and empirically correct. I have much experience using these types of antennas monitoring for induction fields and they behaved as theory predicted.

When poorly designed electronic devices generate induction fields the electric fields have the tendency to spread farther from the source than the magnetic fields. This is a generalization but knowing this leads to the conclusion that a loop would pick up less of the locally generated noise most of the time or in other words it would be an advantage to use over a dipole.

Most people that have local noise problems and purchase a loop antenna such as the Wellbrook find that their listening situation is greatly improved.

I use a non-amplified folded dipole and non-amplified shielded loop. The loop picks up much less of the local noise and picks up as much signal as the folded dipole depending on the band.

Notice that belief is not required for any of the foregoing.

****

You have the right idea about field impedance vs distance but that relationship is appropriate for transmitting antennas that are efficient. Here the subject is inefficient noise sources. Here the induction fields fall off rapidly compared to an efficient antenna.

****

I just noticed that your ALA 100 is pretty big and not electrically small at SW frequencies. This means it will also respond to electric fields and being broadband will raise the noise floor. Your 60 foot amplified loop is 10 feet bigger than my passive loop. Why do you need an amplifier with a 60 foot loop? Normally when I consider an amplified loop it more like 1 to 3 foot in diameter.

When it comes to solar storms, yes. These happen frequently enough (and naturally enough) to be considered to be a constant source of concern for anyone interested in satellites. You throw antidotes at this cosmic disease often enough and you may find the cure for one problem makes the ailment worse. Obviously, if you can protect vital equipment from a nuclear war, by all means do it. To constantly disrupt a natural protection from a potential hazard, even to protect pieces of machinery, should require a bit more thinking through.

My question, perhaps a stupid one, but one that begs the asking nonetheless
would be:

If there is so much disruption to satellites from nuclear bombs, is there
going to be anyone around to use them (or care whether they are there or
not)?

All of the nukes in the World going off all at once could not kill off more than about thirty percent of all of the people in the World.Or so I once read somewhere about thirty years ago.Of course that might put a lot of the remaining people on Earth/World back in the ''dark ages'' too.
Like that old guy checkin the oil level in the Waterworld movie said when them flames came rushing up in there said,
OH,THANK GOD!

It all boils down to what your expectations are.

I've bought four different model radios and returned one in the space of 2 1/2 years. My Tecsun BCL3000 gets the most use hands down. I use it as a table radio in my kitchen. I don't need to plug it in because the batteries last forever. I can listen to a couple of my favorite US stations (I live in Canada) with the aid of an AM loop antenna and the sound is way better than what any of my smaller radios have to offer. The display is big and easy to read, and the control knobs are large, smooth to operate, and easy to use in the dark.

Is the S350 a perfect radio? No. But it does fill a niche. Sadly, the quality of construction seems to be questionable for most electronics being manufactured now a days. We live in a disposable society, and most consumer goods we buy reflect that. However, the S350 model has been on the market for a few years now, with relatively few changes. Most of the bugs have been ironed out and the quality control seems to be fairly even, given the feed back I read in various news groups. I've had my BCL3000 for a year now, and it's still fun to use.

acording various projections in the 1980's when I working for my Uncle
Sam in that feild more than 120 million amercians were expected to
survive a nuclear war of the Soveit Union, then depending oin part on
wether comincation (and other services could be kept working that
population may may only slightly or dramitc to 100 million or 20
million (the level subsistance ag could sustatian) so if you can keep
sat and other com links up ayou have the abilty to try to re knit
equipemtn with spare part know where esentcail drugg sould be deployed
and have a chance (althought it looked pretty grim in those days) aof
sustaining much of the rest of the popualtion of the USA. Today only
the USA (and maybe the PRC have a real arsenal of worakbale nukes and
therefore far more amercians would be killed in any exchange (since I
dod assume if we launch out weapons it will at a non us target) it also
seems unlikely in any exchange today that the US would dump the rack
and matintining control of the nukes we have not launched would be
crtical use for our sats

irnoicaly the end of the cold has made Nuclear war seem More likely to
many folks becuase it would be a smaller war

hope that will do as an answer

Well, -theoretically-, that's true. However, many of the trials so far *have* already been failures (from an interference standpoint). And the FCC by ignoring their own rules, doesn't seem to care. And that's bad because if it is not stopped now, but becomes widely entrenched with millions invested, it will be economically too late to be killed.

Because of the demonstrated failures, NOW is the time to kill it...and, for whatever reason, the FCC is in the full "Ignore" mode.

> Because this is a political decision, not a technical one.

Absolutely correct, it is viewed as political, not technical. But there is only one pesky little problem with that...NO ONE HAS YET REPEALED THE LAWS OF PHYSICS!!!

I was cruising around the HF bands last night look to see if I could snag the BBC in my area. I stumbled across a SSB HF broadcast of Alaskan seas conditions. This caused me to do a search on Google for HF marine stations. After drilling into various sites, I hit:

http://www.shipcom.com/frequencies.html

I was surprised to see the front panel of an old BC-221 (SCR-211) staring back at me. It is good to see that venerable old frequency meter still considered "cool" enough to be part of a commercial web site.

Steve.

I checked my filters and nothing should have kept out the posts.

>
> You should consider using a dedicated news reader instead of Outlook.

I have been fairly well served and pleased with Outlook Express except this one time. I'm not a Microsoft poster child in fact I use Firefox about 99.99% of the time.

I appreciate your advice but I'm still curious why my posts didn't show up. That's why I changed my account a few times. I thought maybe I was being blocked for bad posts or something. Oh well...

Thanks again...

AKA LM. I was lucky enough to find a nearly mint one
complete with power supply and original calibration books,
they are still very useful.
The site you reference has two familiar calls, once
coastal telegraph stations: KLB and WLO. Years ago I learned
code partly from copying ship traffic. Both RCA and MacKay
main stations (KPH and KFS in the West and WCC and WSL in
the East) sent about two hours of press every day, machine
sent at about 25 WPM. That went away sometime in the early
1980's when it was switched to teleprinter.

Well, even my $25 RS radio is much better quality than the S350 - Grundig should be ashamed at putting their name on such a piece of Chinese-made shit, hoping everyone would still think Grundig's are being made in Germany.

I was surprised that this HF stuff was still going. I have a "new in
crate" BC-221-AK that I plan to put into sort of a museum of frequency
standards in the front entrance way of Novatech Instruments along with
the prototypes of our stuff and other company's stuff.

Steve.

Hence, when spring came around, I started running more and more religiously to try and get myself into shape for a better finish next year at this race.
"Oh, we don't have any in stock yet so the installer didn't come out today", she says. The trail through the forest was good and well maintained. When she was done, she says to Dean something to the effect of "We are excited to meet you.
Guess the kids got a little freaked out by the truck coming after them.
So as the car approached the tape at night with headlights on, they couldn't see it at all.
Hopefully, I can continue to raise my running level and someday compete with Dean in an ultra!
You have to plan in advance or you don't get it.
So you just slam on your brakes.
Its not so great when you take your daughters with you through the food line and then sit down and they eat all your post-race food!
Then my mother got me a road ID bracelet for when I get hit. People would sit down near us, eat and leave and we are still waiting on food.
So this morning I set my alarm and got up with the sun. Remember the local installer told me that they will install once DIRECTV ships the boxes to them.
With kids, you tend to want to get in and out. Here I am looking back at my crew. This was off the dirt area they were on.
You have to keep the damn things moving.
We took out the spools of tape.
I was glad because I wanted them to be well rested. Perfect for the long run. I was glad because I wanted them to be well rested.
It was a great cool fall night. Dohn is a fitness instructor after all.
So as the car approached the tape at night with headlights on, they couldn't see it at all.
" with a smirky grin.
Its really easy to zone out and just cruise along.
They even have blood all over them from my cuts at the tri! The chefs at the Blue Spruce cooked a great breakfast buffet. However, the sheriff never seems to get there in time to stop the action.
This was off the dirt area they were on.
but I knew it was true leading up to this appearance today and it was cool that she exposed me for the fan I am.
But I didn't want to miss the opportunity to confront them to stop this situation. They even have blood all over them from my cuts at the tri!

That is a very pretty point that you've raised. Want the answer ??? It doesn't matter what the practical reality is. The ones with all the resources here that are calling the shots are "LORD HIGH". According to their acquired self delusions, they'll just walk between the radiation particles while the rest of us plebeians drop dead slowly.

True enough. Unfortunately, however, the past would indicate that the bad sorts don't change in the least, they just refine their methods of wrongdoing in the hope that they won't get exposed.

The politicians who don't actually do anything bad but KNOW of the wrongdoings are just as guilty as the perpetrators when they fail to report the misdeeds. It's like giving consent by their silence.

Politicians should be the most morally outstanding citizens of a country. They have been given a great trust, which, sadly, is getting betrayed more and more frequently by the dregs who seem to gravitate to public office.

I used to think the little 221 was a real useless piece of test gear.

Wow! Was I ever wrong.

Those things are so easy to use. And damned accurate!

I have one next to my recently restored TBW xmtr.

Great tool to have around.

But I did have to replace a bunch of paper caps in mine.

I suspect it will outlast me by a long shot.

This perversion thing seems to permeate the President's Party. What a bunch of degenerates. I'm surprised 'cuhulin' isn't a card carrying member of the Grand Old Perverts (GOP).

==========
-Dick Armey (R-Texas), former professor, has been accused by The Dallas Observer of sexually harassing female students.

-Jim Baker, televangelist with Pat Robertson at Robertson's Christian Broadcasting network. Committed adultery with Jessica Hahn [1] and then used charitable donations to pay her hush money[2]. Fellow televangelists say he's gay.

-Bob Barr, Republican Congressman from Georgia. Sponsored the anti-gay Defense of Marriage Act, saying "The flames of hedonism, the flames of narcissism, the flames of self-centered morality are licking at the very foundation of our society, the family unit." Was married three times. Paid for his second wife's abortion (she also suspected he was cheating on her). Failed to pay child support to the children of his first two wives and while married to his third and present wife was photographed licking whipped cream off of strippers at his inaugural party.

-John Bolton Bush's appointee ambassador to United Nations, corroborated allegations that Mr. Boltonï¿½s first wife, Christina Bolton, was forced to engage in group sex have not been refuted by the State Department.
-Mike Bowers Former State Attorney General, prosecuted the famous Bowers vs. Hardwick case, based on Georgia anti-sodomy laws. Admitted to a 10-year adulterous affair

-Neil Bush, brother or G. W. Bush, in a March 2003 divorce deposition, admitted repeatedly having sex with strange women who just showed up at his room while on an Asian business trip. (Overshadowing the sex scandal; the business scandal--see link.)

-Ken Calvert, Congressman (R-Ca), champion of the Christian Coalition and its "family values." Sued as an alimony deadbeat by his ex-wife. Said "We can't forgive what occurred between the President and

Lewinsky." In 1993 he was caught by police receiving oral sex from a prostitute and attempted to flee the scene.

-Nicholas Elizondo, Director of the Young Republican Federation molested his 6-year old daughter and was sentenced to six years in prison.

-Thomas B. Evans, Jr. -R Congressman from Delaware may have had an afair with Paula Parkinson (see his article for more info).

-Larry Dale Floyd, Republican Constable in Denton County, Texas Precinct Two. Arrested for allegedly crossing state lines to have sex with an 8-year old child and was charged with 7 related offenses. Age 62 at time of arrest.

-Jeff Gannon Partisan blogger with no journalism credentials and a fake name who got invited to Bush's Press conferences. Is also a pimp and a gay prostitute.

-Richard Gardner, a Nevada State Representative (R), admitted to molesting his two daughters.

-Newt Gingrich, married three times. Gingrich campaign worker Anne Manning admitted that she gave Newt oral sex while he was still married to his first wife. Informed one wife he was filing for divorce while she was in the hospital recovering from cancer treatments.
-Philip Giordano, Republican mayor sentenced to 37 years for forcing two 8 and 10 year old girls to perform oral sex on him in his City Hall office.

-Henry Hyde, Judge who oversaw Clinton's impeachment proceedings, prominent opponent of reproductive rights, who had an extramarital affair with a woman who was married and had three children, during the course of which she and her husband were divorced. Salon.com article

-Bernard Kerik, had two simultaneous adulterous affairs.

-I. Lewis Libby, former Assistant to the President and Chief of Staff to Vice President Dick Cheney. In 1996 published a novel containing bizaree sexual content, including beastiality and pedophillia.

-Rush Limbaugh, triple-divorcee, 30-pill a day drug addict.

-Bob Livingston, former Congressman (R-La.) resigned from the House in the wake of revelations about his past adultery.

-Rudy Giuliani, had an adulterous affair. Pocketed $80,000 for speaking at a charity benefit for tsunami aid which raised only $60,000 for the victims themselves (Feb 2005).

-Bill O'Reilly Right-wing conservative talk show host on Fox News, sued for sexual harrassment by his producer.

-Arnold Schwarzenegger, Republican governor, had sex with a 16 year old when he was 28.

-Jimmy Swaggart, televangelist, said during a sermon "I'm trying to find the correct name for it ï¿½ this utter absolute, asinine, idiotic stupidity of men marrying men. ï¿½ I've never seen a man in my life I wanted to marry. And I'm gonna be blunt and plain; if one ever looks at me like that, I'm gonna kill him and tell God he died." Had an affair with a prostitute.

-Strom Thurmond, republican senator and racist, raped and impregnanted a 15-year old African American maid.

And that's just a few!

I'm an audio person, but noise should be measured in terms of root
hertz. Thus the noise floor you see is a function of the bandwidth of
the tracking filter. As you go narrower, the noise floor should drop.

Here again, I believe being broadband increases the integrated noise,
but not necessarily the noise measured per root Hz. The final bandwidth
of the filter of the radio determines the integrated noise.

Say the noise was 1nV/root Hz. Say the filter bandwidth was 6Khz.
Multiply the square root of 6Khz times 1nV/Root Hz to get 77.5nV.

> Telamon
> Ventura, California

One reason I want to get the Wellbrook teste, is to verify that it is
fact operating
correctly. The guy I traded if from says the performance now is like
when it was new.
His dissatifaction lead, in part, to his moving on from SWL. Of course
even if everything
had worked perfectly he would have grown bored in a few months to a
couple of years.

My comments regarding Dalla's "ultra linear amplifier" had to do with
its use as a
large loop, non fractional wavelength,amplifier, and as a buffer to
make up the losses
in a 4 way power divider setup. The ancient GE multiset coupler uses

Nuvistors
and Dallas' amplifier has much better IP2/IP3/THD then that unit. Of course
it still has the original tubes and I am running plates at about 5 volts lower then
the orignal design. Dallas' amplifier being balanced and having a better handle on
negative feedback should be expected to have lower distortion then a Nuvistor
triode amplifier.

I completed the WL1030 and, at my home, it behaves very similary to the Wellbrook
ALA. Slighlty better 3rd harmonic distortion from the local 770KHz MW station
a few miles away, but still not as good as the stock North Country active antenna,
a Datong AD370 or stock AMRAD antennas as published in QST. I used a Kiwa
highpass, BCB reject filter, on the output of all three antennas. Compared to Dallas'
active dipole all the others are kind of sad.

Receivers used:
R2000
R8B
R392

Hopefully this evening I will get a chance to run the WL1040 and a just completed
"improved" version of Dallas' active dipole to Jeff's condo for a real world, nightmare
test.

All of the antennas except for the wellbrook can be easily tested as one has access
to the amplifiier input. Sadly the Wellbrook is in ?Epoxy making testing and/or repair
difficult if not impossible.

This thread was meant to define what I consider to be a "good" useage of small
loops. That is for mobile or other space restricted spaces where a tuned small
loop can give amazing results. I have been underwealmed by broad band, untuned
loops. I am not saying they don't work, I just haven't exeperienced a broadband
loop that works as good as a simple active antenna, much less a proper active antenna.

Using the small loop on 20 and 40 meters and NVIS I have talked/CWed
mobile
from Knoxville TN to Lexington KY. That is a successfull aplication of
a loop
antenna.

Terry

In 1966 the family did a car trip to Cape Cod. As a young ham, I was attracted to some huge rhombic antennas that we were driving past. At some point we found an RCA facility, knocked on the door and asked for a tour.

It was their ship-shore facility. There were rows of cubicles with a vibroplex key and a mechanical typewriter in each one. ISTR the receivers had an RCA logo and appeared to be late-WWII vintage. The transmitters were somewhere else. The whole room appeared to be essentially unchanged since the 30s, except for the receivers.

Jim, I agree with almost everything you said. The SAT800 is one fine radio, and if I were forced to get down to only one radio (to actually listen to), that would be the one.

I don't agree that it has the best audio though; perfectly acceptable but not the best. Mike has an article on his website about upgrading the speaker but that's too much trouble for me. You can run external speakers through the speaker jack output, and although it's low wattage it's plenty with small efficient speakers. Or you can run it through your home stereo system.

Best audio of any radio has to be the Panasonic RF-5000A.

Nice picture. Sort of reminds me of the WWII surplus receiver sitting on my workbench waiting for me. Needs a new electrolytic and burnt out resistor.

On a different note, I noticed in the picture next to the 221, the 4 dipoles 90 degrees apart. I am experimenting with 800 mhz antennas and can only erect one in my attic. Don't want to mess with rotors. I wonder if you (or anyone) can advise how the 4 antennas are joined, I assume to one downlead (phasing ?, etc.).

3853. Stop Bio-TERROR in America: The Government of Torture!

Newsgroup: rec.radio.shortwave
Date: 2006-10-07 15:39:36 UTC
From: nanodesigns_usa@yahoo.com
Message-ID: <1160235575.949201.285230@m73g2000cwd.googlegroups.com>
Source record: 94128

AMERICA IN DANGER of its own out-of-control Bio-Terror:
Is 1984 here? Or cripping... God help us,
blinded!
Originally Secret Bio-Aerosols are misused to HARM and Torture in
U.S.A.
Tempering with pills/ medicine/ treatments to HARM and DISABLE !

Our government needs TORTURE in U.S.? See details
below...
It has your VOTE, support? Abused... for power-grab or
vicy-terror!
Transitory harm and HELL are U.S.-legal?

Did Denny Hastert cover the basterd? And other Washington
freaks?

CRITICS (political/social/cultural) are harassed and secretly
persecuted
along with their KIDS in schools/colleges, especially, during
tests/exams
(Think: Guantanamo "stress-positions" in the context of
1984-technologies)
Female FBI-informers are coerced
and abused!

Bio-Aerosols and aerosolized chemicals are used to cause:
- severe colds/coughs turning into bronchitis, eye irritation
- bacterial pneumonia/other pneumonia, shortness of breath
- surges of severe headaches, migraines, dizziness, etc.
- fainting collapses by symptoms-mimicking aerosols
- severe stomach pains (sharp, burning, nausea, etc)
- chest-wall pains, heart-muscle inflammations/trauma, etc.
WORSE:
- heart attacks under cover of second-hand smocking
- aerosolized chemicals from the death-penalty drugs
- car crashes/accidents by Vertigo-causing aerosols
- car accidents due to the fine/controlled tempering
- liver/organ failure by small-dose toxins (trace-less?)
- cancer-causing/facilitating - months-long assasinations
This "Yushchenko syndrom" CAN destabilize NATIONs
Waste, Fraud, Cronism and Abuse in HomeSec/FBI
Fabrication of Believable Info/Manufacturing of accidents

U.S. mail IS polluted in "anthrax-like" manner to HARM critics
Libraries, airplanes, hotels, offices, buses, trains - all polluted!
Remote control, off-jacket/off-book/off-paper pollutant attacks!

A network of Secret Gas-Aerosol Rooms operated in US
(in Philadelphia, Narberth, Lower Merion, PA)
(in Wilmington and Newark, DE)
(in Hampton, Williamsburg and Richmond, VA)
AND ELSEWHERE.... details below...
Freddie May/Freddie Mac likely used to buy silent cooperation
Bio-aerosols used to hurt and simulate panic attacks, etc.!
Soviets locked critics into nut-houses, now WE do the same!
Symptoms-mimicking aerosols do HARM, weak or ill people.

Echo-location/wire-taps/listening used to turn homes into cages!

Say "Stop, I care" - call Senate (202) 224-3121
House of Representatives (202) 225-3121
What IS going on in America? *Print and
Post*
Manufacturing of FEAR to grab more Power and Money, of course.
Tragedy IS used to Power Graib, while Fear is molded into profit!

Big Brother spins protection...
And fear is used to clamp.
Democracy needs action!
On which side do you stand?

Looked at this?!! Go to Google/Yahoo newsGroups:

TORTURE IN USA: Secret Aerosol Rooms

US Scientist needs legal help dealing with the secret aerosols rooms
(SARs) operated illegally in Philadelphia area, Newark (DE), Hampton
and Williamsburg (VA) and other places. Highly volatile aerosols with
and without bacterial content cause dry cough, airways a...

Full text was at:
http://buyit.philly.com/findit/search/results.jsp?catId=krd_philenqda...

This was a new on-line ad placed in Philadelphia Inquirer and
Philadelphia Daily News on www.philly.com (see full text below)
It was about the secret aerosols rooms in US. One could find it by
searching "secret", say, in the ad section of philly.com.

Democracy can not function effectively without the informed public. As
a former NASA Langley scientist working in the area of nanotechnology
and nanoscale particles, I have been recently exposed to the
establishment of secret gas-aerosol rooms inside of United States, at
least in the Mid-Atlantic region (from Philadelphia to Virginia).
First, the highly irritant aerosols have surfaced at the NASA Langley
Research Center in several safety accidents. Investigations were
blocked, probably, because of lack of Congressional approval for such
financially-lucrative research at NASA. Later, these aerosols had been
encountered outside of NASA in Virginia, Delaware and Pennsylvania
.
This points out to yet another proliferation of originally-sensitive

technologies into domestic American life to hurt and harass people without a proper oversight and much control. This amounts to torture, extra-judicial prosecution and authoritarian intimidation tactics. The use of such irritants and the operations of the secret gas-aerosol rooms are gross violations of human and constitutional rights of American citizens and various domestic and international laws.

----------Full text of an ad from Philadelphia's philly.com----------
TORTURE IN USA: Secret Aerosol Rooms
US Scientist needs legal help dealing with the secret aerosols rooms (SARs) operated illegally in Philadelphia area, Newark (DE), Hampton and Williamsburg (VA). Highly volatile aerosols with and without bacterial content cause dry cough, airways and eyes irritation, chest pain and inflammation. FBI and Homeland Security associates are likely operators of SARs, while collaborators may be hotel staff and landlords, who get financial/material or other incentives. US citizens and kids are victims.

Torture is any act by which severe pain, whether physical or psychological, is intentionally inflicted on a person as a means of intimidation, deterrence, revenge, punishment, sadism, or information gathering. At times, medicine and medical practitioners have been drawn into the ranks of torturers, either to judge what victims can endure, to apply treatments which will enhance torture, or as torturers in their own right. http://en.wikipedia.org/wiki/Torture

America in Danger!

America in danger -
The vice is NOT impeached.
America in danger -
The public trust is breached.

Big Brother spins protection
And fear is used to clamp.
Democracy needs action!
On which side do you stand?

Which side are you on, boys?
Which side moves you on?
Which side are you on, girls?
Which side did you wrong?
(Chorus after F. Reece)

Your church is burned by haters.
The priests to go to jail?
Your dreams are cheyned by traitors,
But hope still shines through veil.

Dust rooms came back to gas us
With neo-Naz (or Con) embrace...

New immigrants do make US!
And not the SSuper-race...

***

The Government of Torture

Our government needs TORTURE?!
It has your VOTE, and, now, support?
But peace (not vice) needs steady nurture
And trustful words of calm rapport.

Beware of loud, but FALSE, ideas
That flame a thirsty hellish torch.
Protect the old and true ideals
And Constitution's civic urge.

Yes, torture IS a hellish torch -
In bloody hands, a blinded sword,
With Constitution used to forge
All laws on rights as mere absurd!

Remember victim's silent cry
And SEE the Christ in all of us.
Don't let your government to spy
And torture with some bio-dust.

There is NO good use for evil torture!
No matter how the need is spinned
By Nixon's men, as bloody sergeants,
While truth is painfully re-skinned.

Whine, whine, whine. That's all you Canucks are capable of these days.

Stuff some poutine in it, and then blow it out your ass, boy.

P.S. Please try to find yourself a radio that is capable of pulling in more than the rubbish you're obviously getting from CBC.

1 dead after CB radio argument in Wash.
2006/10

11 minutes ago

VANCOUVER, Wash. - A man was shot to death Saturday in a mall parking lot following an argument over citizens band radio, police said.

Officers responding to reports of multiple gunshots in the parking lot of Westfield Vancouver mall early Saturday found Eichhorn wounded in his truck.

The two men apparently did not know each other, but got into an argument over CB radio before they met at the mall. Both men were armed, police said. The nature of the argument was not disclosed.

It's too bad that Yahoo groups is set up the way it is. Once a group has been established, it's sort of carved in stone and certain facets can't be changed without having to start up a new group from scratch. All that was really required was to change the original group to a moderated forum, but that couldn't be done.

Oh well : P

I am planning cross country MW DXpedition. I am a total newbie and find that there is still much preperation work to be done and I don't have equiptment ready and so forth. Lucky for me I nearly cut my thumb all the way off last weekend so I have to postpone my trip. I cut it off using a Ryobi table saw sans blade guard. The blade guard was a piece of shit so maybe I'll spend a few hundred bucks and buy a nice Delta or some other saw with a blade guard that actually works.

Plan Alpha was to drive during daylight hours and to begin my SWL/MWL listening at dusk. I'm thinking I need a plan Bravo which allows some early morning and afternoon listening. Maybe concentrate all my driving between 9am and 3pm. Plan is to log as many 1kw and smaller stations going across USA. Probably better to do before band goes long.

Is this a better plan?

Yes, I agree. The music and voice on broadcast signals sound
wonderfully mellow and full on that radio. Later radios such as the
Satellit 800 are certainly listenable, but they all suffer from the
plastic box syndrome.

..... ALMOST TIME FOR THE GREAT LIBERTY NET !!!

Yes, ladies and gentlemen (and hams too), your wait is almost over, for in just a few short hours the GREAT LIBERTY NET will take command of the airwaves. Millions of Hams and SWLs from all over the world have waited all week for this event, trying to go about their everyday lives, trying to pay attention at work, trying to act like they care about their familiy, when in fact all they could think about is what will happen tonight at 22:00 EDT (02:00 UT) on 75 meters LSB.

Come join them and find out what life is really all about. You'll have to tune around a bit to find the Liberty Net, as they don't have a consistent frequency anymore. Try 3950 or somewhere above that, maybe 3978. But last week they were way down on 3922.

Be there, or be square!

"My life would have been meaningless without the chance to jam the Liberty Net. So get it straight, Bucky." Krazy Jewish Injun (WA9KJI)

But the speaker should have no bearing on whether to choose a given
radio or not, as has been hashed out here before.

Forty and fifty years ago, only the cheap radios had built in speakers.
And often people would then plug in external speakers, for better sound
but also to get the speaker away from where it can mechanically modulate
the receivers local oscillator. The better receivers didn't even
bother, expecting you to use an external speaker that would be better
than could be offered inside.

However small and portable receivers have become, most are not using
them as portable radios. It's no problem at all to plug an external
speaker in, and then sound quality of the speaker will never be a factor.

ANd of course, decades ago, the external speakers that matched the radios
often weren't that great. An open-backed metal case, or a piece of cheap
plastic? The only advantage would have been if they put some money into
the speaker. But now, one can buy low end but compact stereo speakers that
are far better than those old matching external speakers.

My DX pal, Gary Deacon has just caught KSL Salt Lake City on 1160 khz using his ancient (unmodified) rusted and salt encrusted Yaesu FRG-7 and his ALA1530 which sits hanging unmounted on his cupboard door. Salt Lake City is 9,700 miles from his suburban home in Fishoek, a small coastal resort near the main city of Cape Town. The catches he gets from home attests to the remarkable "sea gain" experienced on the MW band when you DX from the beach (or near it).

He did get a better catch than that at our September equinox DXpedition when he caught CASH in Tecate Mexico, right next door to San Diego CA. That was at the Seefontein DX cottage right on the beach of the Atlantic ocean, also using his Frog but then with a 1,300 foot beverage antenna over the shoulder to New York.

Motto of the story is that you don't have to have the world's latest whizz bang radio to get those amazing DX catches, but as Conrad Hilton said, it's all about position, position position!

More info on Gary's activities at Fishoek and our Seefontein DX site can be found at
http://www.dxing.info

I can't dredge up the details from my memory but think
the transmitter location was at Marion Mass. The receivers
were probably either RCA AR-77 or the later AR-88 types.
These are actually pretty good receivers. In the old days
there were several different calls used but after WW-2 only
one was used, WCC (Cape Cod). This was RCA's main east coast
station. Its equivalent on the west coast was KPH. KPH had
various locations but after WW-2 was co-located with the RCA
Communications station on the Point Reyes peninsula above
San Francisco. RCA Communications had its transmitters at
Bolinas Point and receiver station at Inverness further up
the peninsula. There is a web site dedicated to KPH. The
call is a very old one, originally PH, for Palace Hotel, its
original location, issued to the Marconi Company c.1907.
There are evidently other transmitting sites on the east
coast which have been preserved to some degree. FWIW, the
main RCA Communications station in the east was on Long

Island with transmitters at Rocky Point and receivers at Riverhead. I don't know if there is anything at either location to indicate what was there. RCA Radiomarine also had a big installation at Tuckerton N.J. (WSC) the home of the famous 200,000 Watt Alexanderson alternator. This machine operated on a frequency near 100 khz and was kept in running order for many decades for "national security" purposes. I have no idea what became of any of this. Perhaps someone else in the group knows more. I suppose all this is at least partly O.T. here.

institutions and it was easy to get into college and university.and the fees were very low. Government was small and taxes were low. The cold war had not begun and there was an air of optimism that things would get better fast. The population was much smaller and there was little crowding and competition for roads, jobs, parks, schools, etc. I think that period ended about 1973 when wages and jobs started to decline
The family farm was still in good shape and to get a feel for the times, rent the 1945 version of "State Farm" and see for yourself. Make sure you don't get the awful 1962 version with Pat Boone. Music by Rogers and Hammerstein from a vanished era .
And now DxAss will add some stupid comment about how this is all coming back.

While you guys are waiting for the Great Liberty Net
(the greatest net on ham radio - Sat evenings 10:00 PM
on 3.950 LSB +/1 20kc QRM) check out the website
http://www.ve7kfm.com/ for some VERY AMUSING
audio clips of the guy from "Can-Ahhh-Duh" who loves
Americans and other peoples. Where else caoud you
get great DOWNLOADABLE SOUND FILES like
the great Sid-the-Lid talking about "nig-er ballgames"
and other stuff like this..?

Example: http://www.ve7kfm.com/niggers.mp3
"Madera's good friend Sid (BLB) discusses
niggers: "Out of five channels on, we had six nigger ballgames." "

Where else but on HAM RADIO can you get
such STELLAR ENTERTAINMENT as this ?? !!

I don't care what you do in Michigan. If spraying food out of your
rectum gives you kicks, fine....just don't expect decent people to
follow your example, pervert.

Why don't you just go and bomb the hell out of another country with
brown skinned people in it? Or are you too busy writing the defence
argument for yet another GOP pervert?

Neither of us were commenting on the speaker alone. We were talking
about the radio as a complete unit having excellent sound reproduction
abilities.

>
> Forty and fifty years ago, only the cheap radios had built in speakers.

Nonsese. Just look at all of the am and shortwave floor and table
model radios some of which came with huge speakers and most all of
which used wooden cases.

> And often people would then plug in external speakers, for better sound
> but also to get the speaker away from where it can mechanically modulate

> bother, expecting you to use an external speaker that would be better
> than could be offered inside.

Actually the better receiver makers did bother to design a complete
unit that did not require that any aural shortcomings be repaired at
additional expense of the owner. That silliness came later.

>
> However small and portable receivers have become, most are not using
> them as portable radios. It's no problem at all to plug an external
> speaker in, and then sound quality of the speaker will never be a factor.

You are missing the point about the RF5000 again. And the Satellit 800
is touted as being an excellent armchair listeners radio. It isn't as
designed. It is good but not at the same level as a 30 year old
Panasonic shortwave radio that can be had for $100.00 in excellent
condition on Ebay.

>
> ANd of course, decades ago, the external speakers that matched the radios

> are far better than those old matching external speakers.

I have no idea what cheap cheesy radios from 50 plus years ago you are
talking about. The good ones were in wooden cases cost a fair amount
of money when new and had excellent audio that did not have to be fixed
by the owner.

Nonsense yourself.

You are completely talking about "sound quality" and ignoring far
more important issues.

Grandpa's radio may have had good sound quality, but they had broad
selectivity, bad dials, not great image rejection, and they usually
had very limited shortwave coverage.

I wouldn't even count them as shortwave radios. They were AM broadcast radios, with incidental shortwave coverage. They may have cost a pretty penny, but the money wasn't going to capability or features, and in that they are indeed cheap shortwave radios.

THe HROs didn't have built in speakers. The SP-600 didn't have built in speakers. None of the Collins receivers. But those were top of the line shortwave receivers.

Drop down and the cheap Ameco, receivers like the Radio Shack DX-150, the low end Hallicrafters, they had built in speakers. But then, they weren't particularly great receivers.

The receivers you think are the cat's meow couldn't be fixed with something as simple as an external speaker. Yet pick any receiver today and if you lament the sound quality, it can be easily fixed by adding an external speaker.

Yes, in some cases there may be an issue with a particularly bad audio amplifer. But the bottom line is a small speaker in a small plastic case, that can be easily remedied.

I took issue with this because it keeps coming up. "I like this receiver, if only it had a better speaker". If the speaker is the only issue, then add that external speaker and then you've got the ideal speaker.

Michael

You're both comparing apples and oranges. He's referring to the Hallicrafters, Hammarlunds, Nationals, et al, and you're referring to the Philco's, Zenith's and Scott's.

The premium Halli's could be outfitted with a factory speaker, usually in an open backed case, and usually stamped metal. Similarly, the Hammars, Nationals, were also availed of externals in metal cabinets. They were anything but high fidelity, though the receivers were capable of surprisingly good audio. (Many were even designed to use the audio stage as a phono amplifier. All my Halli's, Hammar's and Nationals have this function. Such receivers did not have internal speakers.) Only the entry and low/mid level receivers had internal speakers.

The real glaring exception was the Hallicrafter's R-12 speaker. It was big, came in quite a well made wooden cabinet and would make you drool connected to the right receiver. With an SX-28, you'd never need another woman again.

The cost was comparable to one, too.

The Philco's, Zenith's, Scott's, and their like, all had internals, came in furniture grade wooden cabinets. And they, too, were capable of some really nice audio. And though they were SW capable, they were NOT communications receivers.

And that's where the confusion lies.

Philco and Zenith beat each other senseless in print over speaker size. Not unike the horsepower wars that erupted when Ford took on Chevy with it's own V-8. Bigger was better and sound was everything. Such receivers were not particularly selective, which made them inadequate for tough captures that SX-28 could handle easily. But damn they sounded good.

The communications receivers, on the other hand focussed more on performance than furniture, and were capable of significantly better sensitivity and selectivity than the livingroom consoles. And though the audio amps in these sets were livingroom entertainment grade, the speaker that you blew the final audio into was a matter of personal choice, and an external accessory.

BTW, these cheap, cheesy radios were some of the most expensive receivers on the market in their day. And at one point, the Hammarlund Super Pro series topped out at $980, at the dawn of the 50's. Halli's less so, in accordance with Bill Halligan's mission...but they were not cheap. And most of the comm receivers were more expensive than the livingroom consoles by Zenith, Philco and the like.

Blessed are the peacemakers. That's why I always had a soft spot for Clinton. He used to go all over the place to get people to start fighting. His main failure was with the Irish. He said that he would get them calmed down and they would leave the pub and then they would go back into the pub and start fighting all over again. In my home town there was a river and bridge dividing the town. Many of the workers in the big factory were Irish. Each Sunday, the workers from the north side of the river would fight on the bridge with the guys from the south side. Noses and arms would be broken, guys would be thrown off the bridge into the river, and at the end of the afternoon they would all limp home having had a wonderful Donnybrook. For a good film on this see the "Quiet Man" with John Wayne.

IMO the Drake R7A beats the R8 series for LW/MW DX. Unfortunately it lacks a real synchronous detector, which is what makes the R8 such a good DX machine.

I would also add the Ten-Tec RX340 to the list. It is awesome on LW/MW.

"Sea gain"? Sounds interesting - please explain. Once while
vacationing on the shore of the Gulf of Mexico, Anna Maria Island,
Florida, I was pulling in all kinds of DX at night on the 20 meter ham
band on my Radio Shack DX-440 portable - much more than I ever did at
home (inland).

I'm certainly glad Kerry wasn't a raging homosexual prostitute. If that
makes him a fraud in your eyes, you have serious moral problems. The
reasons for your peculiar attraction to things cuhulin and your never
having had the urge to marry a female are becoming rather clear, BozoBoi..

SEA GAIN is indeed a very interesting phenomena. A group of MW DXer's throughout the world have been researching this and confirmed the very beneficial results obtained when DXing by or near the sea. A couple of the fella's unearthed research done by the BBC over forty years ago when they were researching the best siting of MW transmitters. This was the definitive paper that confirmed the existence of "sea gain" on the MW band.

I did a sea gain experiment with my Drake SW8 at Veldrif in 2005. Using a reference station of France Info, Nice on 1557 I travelled inland from the beach. By the time I got 10km's/6 miles inland the signal had dropped off minus -23dB!

I can confirm after 40 years of DXing in various sites that DXing by the sea is spectacularly better than the best inland location.
Most of your top American DXer's head for the coast during the DX season and get amazing catches not possible inland.

I remember in Vancouver BC in the late 50's the beaches in English Bay were covered with big blond blue-eyed German immigrants. They would lay about in their Speedos and listen to Radio Germany on their neat Telefunken portables. I moved to Calgary for 5 years and when I returned to Vancouver, all the Germans had gone back to Germany. "What Gives?" I asked. It seemed that the European worker was so much better off than the North American worker that there was no point in staying in Canada. In Europe, they got free university tuition with a living allowance, six weeks a year holidays, free medical dental, pensions, and so on. For example, in Germany, a woman who stays home to look after children or aging parents is considered to do meaningful work and is entitled to a full pension. In the US she would get nothing, and in Canada she would get a reduced pension. I was talking to an exchange student from Sweden some years ago. I asked her if she was considering staying in Canada to do her university work. "Oh no!" she said, " I couldn't afford it. In Sweden tuition is free and I get a living allowance." That was when I started to realize that North American workers were getting royally screwed. And it's got worse. Temporary or contract work , shrinking pension plans, impossible tuition fees, a lousy 2-week vacation if you're lucky, stagnant wages, and so on. French are notorious for not emigrating from France: they know when they've got it good. " What has this to do with the topic?" someone asks. I can't remember but it is a Cuhulin thread so anything goes.

Those French! They don't even HAVE a word for Coup d'Etat..

DRAT! And the Dems tried SO hard, too! From buying cigarettes for the homeless in Ohio to vote for Gore, to the Booze For Dem Votes in Illinois, you can't say they didn't give it a good try.
Next time around the Dems will have to resurrect more voters...seems the graveyards are chock full of Democrats just itching to vote one more time.

That's why even if I know the model number of the spectrum analyzer I can not easily know the instrument noise floor in the sweep. The sweep settings will modify the noise floor.

I took another look at the measurement pdf and I think it likely that the analyzer noise floor at those settings is lower than the measurement noise in the sweeps and so at least in the last pair of comparison photos on page 3 clearly show that the ALA-100 has a poorer signal to noise than the vertical he is comparing it with.

I still don't know about the other sweeps as I don't know what is a radio station and what is the local noise in the sweep. When I did work on a range I would turn the DUT on and off to see what actually popped up on the sweep when the DUT is turned on. You had to do this on a range where you can't have a large enough screen room due to cost. I'm sure the author knows what is being generated by the stuff in his house and what is a radio station.

It looks to me that although the Wellbrook amplifiers have very good intermodulation numbers but that the noise floor may be high. You would have to put in a larger signal into the Wellbrook to measure the

intermodulation products relative to the other antenna amplifiers in the pdf document.

Wellbrook does not appear to give a noise figure for the amplifier. The author of the pdf could easily make that measurement since he has an analyzer. Maybe noise is coming in through the power supply connection for the amplifier, the amplifier has a poor noise floor, or the antenna is picking it up.

Wish I could find *anything* radio-wise at Goodwill stores here in Pa. No one knows what a SW radio is here.

I like my 350-mine is good for AM DX and the FM section is excellent. Beats the shit out of my E1 for whip sensitivity both on SW and FM-E1 is going to Drake now. I use the timer on the 350 to fall asleep to it every night. I can't help but think that more could be had from the AM section with tweaking alignment though... anyone got a diagram?

Rich

> home (inland).

The effect is far more dramatic on the MW band!

MW propagation is greatly affected by ground conductivity. FCC regulation 73.190 (figure R3) is a chart of ground conductivity for the United States. In New England and the NYC area where MW propagation is notoriously poor, it ranges from 0.5 to 2mmho/m. Here in the South where it isn't much better, figures run between 2 and 8. (that includes Florida) In North Dakota where a single 5kw station can cover the whole state, figures between 15 and 30 are common.

The chart considers the "ground" conductivity of seawater to be 5000mmho/m. (yes, that's 200 times better than the best land)

Two examples of direct observation:

- Wilmington, NC, at night. Car radio in the beach parking lot: Jamaica blasting in at entertainment quality on 760 and several other frequencies. I start driving inland; within a block the signals are noticably weaker. Within a mile, they're barely audible. When I get back to my motel about five miles inland, Jamaica is totally gone.

- Massachusetts, high noon, car radio about five miles inland west of Newburyport. CHTN-720, Prince Edward Island, local quality. Drive about 20 miles inland to Andover; CHTN gradually fades into nothingness.

Interesting that you observed this on 20m. Maybe less local interference? The ground conductivity shouldn't have much effect on shortwave -- greater *distances* (i.e., being within maybe 200 miles of the Atlantic in Florida, rather than being within 900 miles here in Tennessee) should make a big difference but I wouldn't think the difference between Tampa and a Gulf island would be that dramatic.

It would seem as though some of the "top American DX'ers" are even resorting these days to travelling to or near their wanted DX target, hearing said target, and then actually counting that in their totals. Some are even resorting to using some of the various "DX-tuners" throughout the world and "hearing" their target via computer.

A travesty.

Hmm...that's interesting. All manner of people who used them to listen
to shortwave radio must have been mistaken. Maybe those BBC broadcasts
were simply images of ABC.

>
> THe HROs didn't have built in speakers. The SP-600 didn't have built

> something as simple as an external speaker.

None of tohse receivers needed to be fixed, including the delightful
Panasonic RF5000. They were designed by the manufacturer to deliver
excellent audio when plugged in. It does seem a silly and wasteful for
someone to pay top dollar for a receiver only to have pay even more
money for supplemental speakers and other audio equipment just to
extract an enjoyable boradcast.

> Yet pick any receiver
> today and if you lament the sound quality, it can be easily fixed

It is absurd to have to pay top dollar for a receiver only to have to
pay more money to fix a fundamental design flaw like poor audio.

All we were talking about were shortwave receivers with decent reception capabilities that delivered very enjoyable audio out of the box. We were not talking about communications receivers which are completely different in more than one respect. Usually they are capable of digging out signals from poor conditions but the audio is usually average to sub-par ewven after speakers are added. It's an apples and oranges comparison that has value only as a way of extending discussions.

You weren't. He was. And that was my first point.

Usually they are
> capable of digging out signals from poor conditions but the audio is
> usually average to sub-par ewven after speakers are added.

Actually, it was the added speaker that was average to sub par.
Factory produced accessory speakers for comm sets were of shaped
response. For intelligibility rather than high fidelity. However the
detector and audio stage of many of the comm receivers of the period to
which you refer WERE of exceptional audio quality. Only the speaker set
them apart, sonically, from the livingroom consoles. To the degree that
the audio stage of these comm receivers was on par with the finest
entertainment systems of the day...used the same tubes and transformers
as the Zenith and Philco sets... and was designed to be used for
connecting a phonograph or record changer. Adding the right speaker was
all that was necessary to complete the system. As the Hallicrafters R-12
was intended to do. But such rigs came with no internal like the less
expensive sets. For a variety of reasons. Users of higher end sets
normally already had one or two receivers in their listening
environments, and already had speakers for them. Including a speaker
with every receiver was not only not necessary, but a waste of
resources, at a time when free spending wasn't a part of the lifestyle.

Another is that users often connected their rigs through a single common audio output on the desk for all receivers. Such rigs had high impedance outputs that could either be connected to multitap repeating coils, or mixing amplifiers. Speakers for every radio were not necesary.

But the receiver audio was, in fact, very good. It was the audio shaped by the speaker that made the difference between entertainment quality and comm quality.

>It's an apples and oranges comparison that has value only as a way of extending discussions.

All right. you're not interested in the full picture.

Got it.

Sorry to have wasted your time.

The difficulty in making measurements on the ALA 100 with test instruments is you need a differential drive. I don't know if grounding one side is kosher.

> You weren't. He was. And that was my first point.

Please read the message before attempting to compose a response. The
original poster in this thread said the Panasonic RF5000 delivered
excellent audio, to which I agreed. At no point did he or I drag the
irrelevant comparison of communications receivers into the discussion.
Good grief.

>
>
> Usually they are

> Actually, it was the added speaker that was average to sub par.

Still an improvement to a communications receiver which may not have
had a speaker to begin with. But if the audio quality is still

substandard, then why bother.

> Factory produced accessory speakers for comm sets were of shaped

This newsgroup has dwindled into every thread turning into pissing matches and back biting. Does anybody moderate this group at all? Certainly it must be or there would be more Viagra advertisements.

I'm wondering how many people are turned off by this hobby when they read some of theses posts? Please don't anyone answer as it would only be something negative and mean spirited.

So I guess that's it for the Grundig Sat 800 talk...

By the way, if there is a moderator here and you need some help, I would be willing to volunteer part of my time to help moderate this group.

Nobody moderates the news group. You have to learn how to deal with the public. You set your own lines by filtering the news group so you read people you want to read and kill file the rest. If you can't do that with Outlook then get yourself a dedicated news reader.

A news group has to be created with the moderating function. This news group was created years ago as an open news group.

Problems with moderation is that people want their posts to show up quickly. When the news servers are working well it is a little slower than chat.

For you to moderate the news group all posts are mailed to you and then you post the ones on the news server that meet the stated news group rules. Are you willing to sit there a good part of the day and night to do this? Probably not. You could start a white list of people that pass through your computer to automatically post but you would have to go back and cancel them if anyone on that list that got out of hand. I can't think of an automated way to do this that would be satisfactory and fast. You could cut down the crap on the news group but not all of it and posting would get delayed.

Any problems that you have personally, computer problems, or ISP problems, or problems with your news provider Giga news bring the entire news group to a halt. This happens all the time on moderated news groups.

People already have the option of moderated news groups like the ones on Yahoo. Go there and create one to your liking. It's easier than creating a new Usenet news group. People have done this already so go check them out.

Grounding one side would not be acceptable. I would use a simple test
BALUN to drive the input.

Monday is the Canadian Thanksgiving. One of the things I give thanks
for is that I am not going to waste any more time trying to communicate
with DxAss. Instead, I am going to explain existentialism to the fence
post at the corner, where I am more likely to have more success.

Actually, if YOU read more closely, you'll see that was exactly
what he was doing. The receivers to which he referred, were comm receivers.

Good grief...please go back and re-read the thread before posting
anything else. I was responding to:

"Best audio of any radio has to be the Panasonic RF-5000A."

And not surprisingly I agreed wholeheartedly.

Someone else wanted to re-direct the discussion to what was initially an un-described kind shortwave receiver but later became communications receivers. I had and still have no interest in comparing the performance of receivers that are designed for such different purposes: Broadcast receivers and communications receivers. You and the other individual may have an interest in such a fruitless exercise, but I don't. Go play your games elsewhere.

And I was responding to:

>>>>>>>>> Forty and fifty years ago, only the cheap radios had built in speakers.
>>>>>>>> Nonsese. Just look at all of the am and shortwave floor and table
>>>>>>>> model radios some of which came with huge speakers and most all of
>>>>>>>> which used wooden cases.

One was a reference to comm receivers and the other was a reference
to shortwave capable entertainment radios. It may not be worth debating
the matter, and as an earlier paragraph suggested, it's been done to
death, in this forum, but there is ample room for discussion of the
nature of audio in receivers. Regardless of class. Since that was the
topic starter here.

But, as you wish.

Although, to comment on the original point....the best audio I've
ever heard from a radio...was from a Scott Philharmonic.

Just don't try to lift it.

Do have a good day.

John,

Yes, know what you mean. I've just spent two weeks in Fiji. I took a Sony ICF-SW55 portable and 20 feet of wire which I put up inside a bungalow. The little bungalow was about 10 metres from the water's edge.

I've done this before several times. It is incredible what you can hear. Mainly, because of what you CAN'T hear - namely all the electrical static and noise pollution of living in a city! It's like an astronomer escaping to the desert with a telescope - seems like there's many more stars than usual.

On a clear day, you can hear for ever! And sometimes the signals you get are very weak. But also very audible because there is simply NO noise.

Under conditions like these, a simple portable radio and piece of wire will out-perform many a city-based high-end receiver setup.

Mark.

Antarctic summer season is now open (October to March).

Last week, heard ICE-zero-seven. This morning, I heard ICE-zero-nine, on
8867 kHz to Auckland, then on 9032 kHz to Auckland then to "McMurdo Ops"
also on 9032 kHz (all USB.)

Flights are from Christchurch New Zealand to the ice runway (whose
orientation literally changes with the wind) at McMurdo Station, Antarctica.

Mark.

4006. Antenna impedance matching - old Grundig tube receiver

Newsgroup: rec.radio.shortwave
Date: 2006-10-09 00:32:42 UTC
From: furtherside@yahoo.com
Message-ID: <1160353961.973653.213110@m73g2000cwd.googlegroups.com>
Source record: 94182

First, I'm an absolute newbie.

I bought an old Grundig 2540 multiband receiver at an estate sale. It works great, and I was even able to get a few shortwave stations with the built in 12" piece of strip antenna.

So, now I want to try to make a wire antenna up in my attic. I can probably make a 'rectangle' about 70 feet total length up there. My question is, if I make this antenna, what is the best way to drop the signal down into the house? I think I need to convert the long wire into some sort of impedance match, for a coaxial feed to the room I keep the radio in -- but on the back of the radio it has two spots for an antenna connection: "FM" or "240 ohms"

So, what is the right way to do this? Is there such a thing as a 240 ohm balun that I'd put between the long wire and the coax?

Or something else?

Thanks a million for any help you can give me.

-Chris

How old is "old?" Tube? Solid state? Does it come on as soon as you turn on the on-off switch, or does it take about fifteen seconds to warm up?

That's an advantage, as you have fewer preconceived notions.

> I bought an old Grundig 2540 multiband receiver at an estate sale

Does it look like this?

http://radioatticarchives.com/images/g/Grundig_2540U_Jones.jpg

Tht's a handsome set. You might want to ask at
http://groups.google.com/group/rec.antiques.radio+phono
too, as it is old enough to be of interest to those folks.

Grundig has recycled the number 2540; it is now the model number for a
TV set.

John, may I ask a possibly stupid question? Does it make a difference
as to which direction the signals are coming from in relation to where
you are on the coast? For example, I live on the Gulf Coast side of
Florida, so European signals would have to come over the peninsula of
Florida to reach my antenna. Would being located on the other side of
Florida, say near Miami, be better for European signals, where there
would be nothing but ocean between my antenna and the radio station, or
is it an omnidirectional effect?

It has come to our attention that many of the DX398 (Radio Shack)
receivers have speaker problems. If you hear a buzzing sound on speech
or a fuzziness to the sound quality, the speaker most likely will
require replacement. Evidently there are many DX398's out there that
have failing speakers. Kiwa offers a replacment speaker for $5.00 (does
not include shipping). If you wish Kiwa to install a new speaker the
cost is $16.00 (includes the cost of the speaker). Since this problem
is uncommon, it is not part of the package price mentioned above.

Yeah, but then what are you testing. The ALA 100 or the balun. Good
instrumentation isn't simple.

The BALUN would be simple and you would test it first. It would be no
problem at all.

Not a stupid question at all Justice - the results I quoted of doing the test on France Info from Nice indicates that the sea gain effect is indeed omnidirectional, as the path of France to the DX test site at Veldrif is over the African continent.

So if you are trying to get a distant local station inland, you will experience a great gain on MW by going to the seaside.
Having said that though, obviously the gain over the sea will always be superior to the land, but an amazing improvement is also possible over land as well.

At our Jongensgat DXpedition site we have a clear path to the East over the Indian ocean to Australia and the Far East, so signals from that area are really good. But we also get amazingly good reception of the U.S. which has a path of two hundred miles overland and mountains before it reaches the Atlantic ocean.

The best U.S. catch I ever got was KGA, Spokane from Jongensgat. That is 10,000 miles away and 200 miles of it is over the Southern African continent.

Have fun and enjoy some DXing from the seaside.

RULES FOR DEBATE ON REC.RADIO

1. Never use more than one sentence to explain your idea. No verb or subject required.
2. Use the following words in anything you say: "tard boy, dumbass tote, canaduh, americugh, turd,get help, take those meds, wacko.
3. The first person to use all these words in a sentence that has no idea in it wins.

This codifies the practices of this group.

Not really. You need the balun to "act" like the wire antenna, which
means you need to characterize the wire antenna first, so you know the
impedance you need for each frequency tested.

There is a reason why Welbrook has no competition. I wish they did
since that would lower the price of the gear. I'm sure ANdy Ikin is
just snickering at this thread.

Yes, that's it. I was lucky enough to find one that had been kept on
display in the parlor for the last few decades -- so it is in pristine
condition. It's annoying that Grundig is using the model number again;
it complicates google searching a bit.

I'll check over in that other group as well, thanks for the pointer.

If you are interested in an inexpensive replacement speaker for your
909,
try the url below. It was given me by a member of this group recently,
and
for a mere 99 cents, I was extremely impressed with its performance.
The
part number, if you're interested is: 13-404.

www.hosfelt.com

-Brian "

I bought 2 13-404s back in June just in case. Look to be the same
as teh speaker in the ATS909/DX398 but I can't swear so.

4055. Re: Vertical Antenna And ALA 100 Comparisons

Newsgroup: rec.radio.shortwave
Date: 2006-10-09 15:10:29 UTC
From: Guy Atkins <dxnospam@guyatkins.com>
Message-ID: <ieudnZooYsn0-7fYnZ2dnUVZ_tGdnZ2d@comcast.com>
Source record: 94280

Hi Dallas,

I've been curious about your noise-reducing antennas some time, so this past weekend I decided to build one as accurately as possible per your design. I first got interested these antennas in the early 1990s during some e-mail exchanges with Denzil Wraight in Germany.

I used the 3:1 turns ratio in the antenna transformer, and 18 ga. twinlead speakerwire between it and the 1:1 transformer. The top of the 45 ft. vertical is suspended to a branch in a tall tree, and the bottom end fastened to a 5-ft. copper pipe in the ground. The antenna is located about 60 feet from the house, and my Wellbrook ALA 100 is 40 feet from the house.

I was quite surprised find not just worse noise from the vertical, but MUCH worse noise. Signal levels seem good, but the noise is so bad the readability suffers greatly, compared to the loop. For instance, this morning past sunrise I was hearing JOAK in Tokyo on 594 kHz with an S-3 signal in Japanese, coming in nicely on the loop. However, the same frequency on the vertical was just a strong BUZZZZZ of light-dimmer type QRM. This was the most pronounced of the comparisons, but in most cases of checking frequencies up through HF, the loop was the outright winner. I tried to record 594 khz for comparisons, but I was using my modded R-75 and didn't have the recording software configured properly since my last DXpedition, and my SDR-1000 isn't fully hooked up at the moment. So, I wasn't able to make a quick recording before the signal faded with increasing daylight.

I did find a couple signals on the tropical bands where the vertical provided a stronger signal with equal noise pickup (so therefore better S/N than the loop).

However, my main interest right now is foreign MW signals. Do you have any tips for improving this antenna's noise rejection on MW?

I can only think of two things that might impact the performance here. I used the same type of binocular core ferrites that W8JI recommends, as I have a lot of them. You used a traditional torroid form. Also, I don't know how good the ground needs to be for this antenna to work well; the single 5-ft pipe may not be sufficient (soil here is reasonably good, though, clay mixed with organic material...it's a forest floor).

Thanks in advance for any ideas!

You can't tell me you're surprised. Afterall, wasn't it the numbers that convinced Mark Byford that the World Service reached more Americans by it's FM affiliations than by shortwave. Even though, at the time, FM affilliation was clearing, on average, less than 2 hours a week in most markets. And of the two FM affiliates here in the Windy, at the time, less than 1 hour a week between them.

BBC, in recent years, has had a problem with numbers.

Largely, because year end bonuses were tied to them.

Byford and his top execs, for turning off the Shortwave feeds to North America pocketed bonuses equalling the savings in operating costs realized by shutting of those SW feeds.

Despite the reality that those SW feeds, by Byford's own numbers, captured and held millions of listeners a week. And that those listeners, and their TSL, time spent listening, were not servable through the highly touted FM and webserver access.

If Karmazin had been successful in buying the BBC, there would have been bodies flying out the windows at Bush House.

My condolences to whoever buys this thing. It eats batteries, and
should win awards for the worst ergonomics, and most difficult to use
user interface ever developed for a Radio.This was supposed to be
Grundig's answer to the ICF-SW77/55, score one for Sony.

I bought one from eBay a couple of years ago for half what he's asking
for this one. I got it just for the hell of it, just to add it to the
collection. It's OK and has some nice features like the RDS on FM,
but it's an average performer at best on SW, and is definitely a strange
radio!

Yeah I already contacted the guy at hamstuff his were right at 4x6,
every card I've got is just over 4. So I don't think that'll work.

The ones at qslcardholders/qslshack are just under 4 inches, he does
sell some pages for a binder but, at 5x7 those look like regular photo
pages I could get locally. I don't really want to put them in a binder.
But, I guess i might just have to do that.

Thanks a lot for looking.

No you do not want the BALUN to "act" like the antenna wire. The BALUN is to couple the generators single ended output to the differential amplifier input so the amplifier can be tested. This is trivial thing to do to test the amplifier. I'm not going to argue about this.

Amplified loop outdoor antennas have a number of costs associated with them and I don't expect prices to lower.

4096. Grundig S350 DL Question

Newsgroup: rec.radio.shortwave

Does anyone know the (real or claimed) values of the two filter bandwidths in this radio? I keep hearing great things about its MW performance and would like to check it out for myself to backyard DX with. One thing that seems consistant in reviews is that the wide filter is too wide and inadequate, but the narrow does a good job. The Kiwa website doesn't state their bandwidths but rather the poor shape factor and ultimate rejection of both.

One of the reasons that I'm interested in this model is because the filters can be upgraded for better MW DXing, and that its actually a true analog radio with digital frequency readout. My Channel Master Super Fringe is a killer for casual DX, but the frequency readout is of course terrible. The Panasonic RF-2200 is great with very accurate (to 10 kHz) readout, but I find that the narrow filter is not good enough and it can't be replaced as its a tuned LC circuit.

Has anyone tried the 350 DL with upgraded filters? Your thought?

There are hundreds of millions of Americans who have access to the
World Service 24 hours a day. Shortwave broadcasting is an
anachronism in the civilized world.

Well, since you're posting through Google Groups ...

But let me answer your question anyway: I use a news reader which can filter posts by checking any header you wish. The free news reader Xnews will do that and will let you check the Message-ID and References headers, for example. You can kill all posts from Google Groups, plus all followups to those posts, by using the following score file:

```
--(cut here)--
[*]
score:: -9999
Message-ID: googlegroups\.com
References: googlegroups\.com
```

" Shortwave broadcasting is an
> anachronism in the civilized world."

Galaxy Guy replied:

I'm not so sure that you can call anywhere "the civilised world" but
maybe you mean the highly developed world of modern satellite and other
digital and analogue routes of transmission which are possible. SW has
been with us as long as radio has, call it an anachronism, call it
quaint,
but it is still there and it often means using a radio dial (hurray!)
to tune into whichever station you come across. Most households have
radios with SW on them; even 'ghetto blasters'
in the 90s still had SW. In this world of clinically perfect sound
sometimes it can be a pleasure to take a trip of discovery on SW. Some
anachronisms are worth hanging onto.

I think he wants to be able to killfile unwanted posters while he is
using Google Groups. As a Google user myself, I have found that there
is no *obvious* way to accomplish this end.

On the other hand, Google allows one to pick and choose messages to
read at will, although possibly without adequate information to know if
they are worthwhile before opening them. In any case, I find
"killfile" to be largely unnecessary anyway.

Interesting - the news report I saw two nights ago suggested that Kim may have enough fissile material for 6 to 12 bombs or so...but if the bombs are all firecracker-sized, then he may not have very much at all.

Either way, the guy is dangerous, both to his neighbors and his own people. He needs to be shown the exit door as soon as the nation can handle it.

Yes it has been going on for some time. Real DXers my ass. Some of the published claims I've read over the years seem just a little fishy considering their QTH and propagation conditions at the time.

Yes that is correct.

In some other message boards I am in, you can put posters who are in
outer space on Ignore. I was hoping for something like that.

That would be invaluable here. Probably reduce a good 30% of the
unrelated malarky and cut out a lot of the b.s. - leaving a higher
percentage of bona fide subject matter to be read.

They occaionally had one of those middle management types on "Write On",
(the listener feedback show, now "Over to You") and they've got a terminal
case of "New Media" disease. They think the World Service is a web site.
And the only audience that counts are "persons of influence".

I got a vague impression that the BBC owned a chunk of XM. Or maybe
XM slipped them some bucks under the table to kill off North America
Shortwave.

Beware of "authors" like Mahdi Darius Nazemroaya whose bios does not exist.

Better you read his article from here
http://www.cpcml.ca/Tmld2006/D36120.htm#5

Who is Michel Chossudovsky?

He is editor for the Centre for Research on Globalization, which operates a website at globalresearch.ca. The Centre for Research on Globalization states to be "committed to curbing the tide of "globalisation" and "disarming" the New World Order". The center's latest stories are on Iran: The Next War?

He is an active member of the anti-war movement in Canada, has written extensively on the war in Yugoslavia, and has been involved in the propagation of alternate theories regarding the September 11 terrorist attacks.
http://en.wikipedia.org/wiki/Researchers_questioning_the_official_account_of_9/11#Michel_Chossudovsky

He is a frequent contributor to Le Monde diplomatique, Third World Resurgence and Covert Action Quarterly. His publications have been translated into more than twenty languages.

[Coincidently, so has Mao's little Red Book.]

Chossudovsky has acted as economic adviser to governments of developing countries and has worked as a consultant for international organizations including the United Nations Development Programme (UNDP), the African Development Bank, the United Nations African Institute for Economic Development and Planning (AIEDEP), the United Nations Population Fund (UNFPA), the International Labour Organization (ILO)[United Nations], the World Health Organisation (WHO), the United Nations Economic Commission for Latin America and the Caribbean (ECLAC). In 1999, Chossudovsky joined the Transnational Foundation for Peace and Future Research as an adviser.

What is Transnational Foundation for Peace and Future Research?
http://www.discoverthenetwork.com/groupProfile.asp?grpid=6757

In short he is a hack for the impotent United Nations
http://www.discoverthenetwork.com/groupProfile.asp?grpid=7147

BTW - you spelled "research" incorrectly - BWAHAHA!!!

"ve3..." <ve3iut@hotmail.com> propagandised

It isn't worth the time to prove the accuracy of the figures on that blog, so who knows whether they "lied". And who really cares...broadcasters are by their very line of business spin meisters. But it only stands to reason that non-shortwave BBC coverage has to be huge and growing rapidly and as a consequence shortwave listening is shrinking proportionally as well as in absolute numbers. The choices are many: BBC is broadcast on television, FM radio, cable FM, satellite FM, internet radio and text via their website.

What I find most interesting about kill-filing is the number of times some guy on this forum says he is gonna killfille someone, and usually ends the sentence with a "plonk". And yet that same guy is within hours back in fine form as the lead participant in yet another pissing contest with the one supposedly kill filed.

I suspect the number of readers that really use that feature are very small. After all it would take all the fun out of rec.radio.shortwave. Many threats, but no real followthrough.

Interesting topic. I wish I had tried MW DXing.

Less local interference is most likely at least part of my improved reception on SW. And I live in Lakeland, another 35 miles inland from Tampa.

I don't have any interest in the drama and kindergarten stuff that goes
on here.
I actually come to read about radios and shortwave.
Any tool that will help me to that better, I am interested in.

My killfile removes 60% of the posts in rrs. In addition I frequently mark threads as "Ignore". This makes it easier to selectively read the remaining posts.

Without a killfile, I would be long gone.

I find that the Google online reader is as easy as any reader to use as
any for quickly skimming mesaages for those that should be passed.
While there is no killfile tool, in some ways that is a blessing
because you can quickly scan threads and pass on messages or read them
at will. Usually the topic or the authors name is sufficient to make
that determination and Google will suppress the text until clicked on.
Killfiles have the obvious limitation that any messages from one author
are hidden, and I've found even the idiots will sometimes have a pearl
to share.

I assume that since you are using google, your ISP is not providing access to a newsgroup server. (Check with them, maybe they do provide a server.)

Here are a couple of options.

1) Download a free newsgroup reader that has good killfile support. (I'm using KNode under Linux.) Then read the groups from one of the free newservers. When you want to post, use google.

2) Subscribe to one of the major newservers. Use a reader that supports a killfile. Then you can post from the same application.

Keep in mind this person's first (or even second) language is not English..
he knows much more Korean (native) and Tagalog.

We are all fine here. But just after the typhoon, oh, it's terrible.

Because there are no electricity nationwide for 4 days, and no water.

We use candle during night. It's so uncomfortable.

And most importantly, It's so hot to stay at home. Because we cannot on the
fan.

You know? We use hand-fan and we stay outside the house.

And (my childrend) had no classes due to no electricity.

And you know that? This typhoon was so strong that many big as in very big
trees fall down and the post! it also fall down. Oh, my God!!

According to Steve Canney, the V-P of Engineering for Standard Radio (owners of
CFRB-CFRX) is determined to see it return (and stay) on the air, but the current
technical glitch is apparently a real head-scratcher.

I'm very please to announce that the current edition of MediaLine Radio (7 October - 20 October 2006), now available on-demand at http://medialineradio.com, for the first time enters the realms of modern radio drama. This edition presents the first episode of Garson Krebs Private Eye, a comedy detective series produced by the Radio Repertory Company of America in 1995. The series has formally aired on National Public Radio and the former WorldSpace channel, LETTERS. More information can be found at http://www.rrca.com .

MediaLine Radio can be heard via IRRS (http://www.nexus.org/radio.htm) and WorldFm (http://www.worldfm.co.nz).

I hope that you enjoy the series,
Henry

David wrote:
> I like steam engines but I don't expect the railroads to use them.
Galaxy Guy replied:
Ah, but in the UK and across Europe, especially Eastern Europe, you will find many rail lines that still only run steam trains. It is a major enthusiasts hobby, huge infact, with many volunteers running previously closed rail lines and making a success of it. You'll even find narrow gauge with chains on Mountaineous lines running steam trains. People love steam
they also like Eurostar TGVs - trains de grand vitesse; (nobody very much like diesel engines though overmuch) Railway lines can be different gauges and operate different types of train but the one thing they have in common is that they carry railway engines, carriages and people. Radio waves are much the same, some are state of the art digital affairs, some date back to the late 19th century but they all work and just as there are people who rescue steam railway engines and are devoted to them, so also there are people devoted to all the idiosyncries and anachricisms of SW. Ownership of SW radios is high, but I agree people tend to make infrequent visits to the 31 metre band, for example.
However just as in the railway industry there is room for state of the art trains, with radio
the situation should be just the same. I think there is room and life for SW for some time yet.

If you are interested in an inexpensive replacement speaker for your
909, try the url below. It was given me by a member of this group
recently,
and for a mere 99 cents, I was extremely impressed with its
performance.
The part number, if you're interested is: 13-404.

www.hosfelt.com

-Brian "

I bought 2 13-404s back in June just in case. Look to be the same
as the speaker in the ATS909/DX398 but I can't swear so.

Terry

I'm sorry that I cannot answer the technical question, but to give some related comment, I've got an S350 DL and found it to be one of the best-performing MW radios for actual long-term listening to stations which are too weak to enjoyably listen to using other radios. The digital readout makes me pick it up to use instead of one of my GE SuperRadios.

I am speaking of daytime listening to a weak station located in Illinois which is set up to service that region as opposed to the Missouri side of the river here in St. Louis, where I am located. There's a new station on 1510 kHz, WXOZ, that has been playing 50s/60s oldies just about all the time, though it announces that it will change over to talk radio on weekdays, with this music being mainly on a Sunday-afternoon show. Anyway, most regular radios get it very weakly with a lot of noise but the S350 DL, using the "Wide" bandwidth setting, gets it nice and clear. Aside from the GE SuperRadios, it takes a more-expensive digital radio, like a DX-398/Sangean 909, to get such a listenable signal. A Kaito/Degen 1103 will pick it up, too, but the sound is much better on the S350.

I don't really MW DX, though, so I haven't spent much time on night-time weak-signal testing using the narrow bandwidth.

It's something people can get you for Xmas (or me, my December birthday) without spending a lot, and thus a good gift for those of us who already have tons of stuff and tend to want only items that cost a lot, too much for friends' presents. Amazon usually has a good combo deal with the WRTH which has a reasonable total.

Yeah, they had Byford, himself, on...and in his own words he said he
was only interested in reaching 'decision makers and opinion formers.'

Pretty much says what his real goals were.

> I got a vague impression that the BBC owned a chunk of XM. Or maybe
> XM slipped them some bucks under the table to kill off North America
> Shortwave.
>

What was interesting, is that when the shortwave streams to North
America were shut off, there were no alternative outlets except FM
affiliates, which were carrying on the average less than 2 hours a week.
Most, only a handful of 5 minute summaries at the top of the hour,
overnight. The webstreams at the time were slow, and under resourced.

They could only serve a few thousand listeners worldwide at any given time. A big breaking story, and they would crash. So with the end of shortwave, all those listeners, some of them, like myself and most of us here, with 20 or more hours a week in listening, were orphaned. In favor of a few minutes a week of news. But the news feeds were directed to the 'right' listeners.

On "Write On" Byford attempted to quote the numbers that showed that he had more listeners on the FM affiliates alone than were listening through shortwave. His numbers didn't begin to add up based on the BBC's own worldwide listening figures.

But then, he wasn't really interested in listeners in number, as much as he was interested in 'the right listeners.'

His school tie, and a 6 figure bonus that year, did most of his thinking for him.

I don't think BBC owns a piece of XM. And when XM and Sirius launched, World Service streams were split to an all news and information stream on Sirius, and the 'Rich Mix' that we all enjoyed, on XM.

When shortwave broadcasts ended, the "Rich Mix" feature and entertainment programs were moved to another BBC channel, and the web, and both Sirius and XM became, for the most part, only news. Again, to more desirable 'decision makers and opinion formers.'

Anyone who still believes that BBC is an impartial news source, needs to rethink that position.

Agreed. My killfile is heavily populated. I get a big smile when I see
my reader report "downloading 85 new messages" and then, after the
download, there are only 50 messages.

I filter by poster for the obvious retards. And I do as you do: for
those people that sometimes post interesting, relevant info, but also
post a lot of nonsense, I employ a filter on the thread.

http://cgi.ebay.co.uk/ws/eBayISAPI.dll?ViewItem&item=190040427658

Grundig Satellit 2100. Dials light up and crackles when switching wavebands, but no sound. Suspect the switches are dirty (common fault on these receivers) as this set needs a good clean up. Its not been touched/opened by me as not got the interest to sort it out, but should make a nice radio once repaired and given a bit of Mr Sheen. Its complete. No knobs missing and everything feels as it should mechanically. SW Turret tuner very smooth. Telescopic aerial is in very good condition with no dents or wear, but has the very top bit missing as in photo. Right end of handle plastic slightly cracked. Few minor scratches but nothing serious that would detract from it when cleaned up.

Hope it goes to a good home where someone can spend a bit of time bringing this radio back to its former glory. These are terrific radios from an era that has never been repeated by Grundig or any other radio maker in my opinion.

I have found that a single ground point,ie "standard" 8' AC mains ground ro, are
at best very marginal. And the lower the frequency, as a general rule, the "bigger"
the ground should be. Hams often use radials.

Think of the classic dipole. It has two arms. The classic vertical "monopole"
needs a very good, ie low RF resistance, grounds. At the very least I would
try for a set of 3 6' ground rods seperated from each other by at least 6'.

I think I may have gone overboard with a whole house perimeter ground ring,
but I was given the copper tubing and a friend used a small Ditch Witch to
dig the trench.

Did the improved ground make a difference over the discribed set of 3 rods?
There is a 10W TIS station in Winchester that I couldn't receive on my 70'
"long" wire antenna with a R2000. I tried a, as near as I could build it, identical
ground set up and wire antenna at about the same height, from a friend's
home who is about 5 miles closer and who has a lower RF background
noise floor and I think I could detect the carrier in SSB.

Maybe your soil is unusualy conductive and a 5' rod will suffice, but I suspect
that a better, ie more complete, ground system will help all of your non
dipole antennas.

And exception to the "good" set of 3 ground rod "rule" is with the Lankford
Active Antenna, AKA AMRAD, which will operate very nicely on a single
8' ground rod driven so that 2' remain above ground for a mounting base.

With a Lankford Active Dipole no ground is required. I have tried one with
and without the 6'/2' ground rod. And it worked very well both ways. At
some frequencies the grounded operation was a little quiter. Of course with
any active antenna great care should be taken to insure that common

noise
mode noise doesn't go up the braid and enter the antenna. The Dipole
configeration is much less sensitive to common mode, but it attention
to
detail will be rewarded. The best single refference I have found is the
"Common Mode Choke" PDF by W1HIS. I don't have the link handy,
but I have given the link several times.

A call to your local utility and/or a MW broadcaster can often get you
valid
information on local ground conductivity conditions. I did notice that
on the
coldest days last winter, when the temp droped to below 0F, where my
older
ground lost some effficeincy from the ground freezing, my new, super
ground never varried. And this summer during the drier, though to be
fair this
was hardly a dry summer, periods my ground stayed effective.

I am not really into NDB or MW DX but I can report that the improved
ground
really made a lot more NDBs receivable, and I found a lot more garbage
stations on MW. A simpler super ground that we installed for Will, a
new
SWL that I am helping, consisted of a 1/4" copper tube that is about
20'
long and connects his "SW" ground to the AC/Mains/Telco/SatDish ground.
Lowered his noise by several S-units on a DX398 all across LW/MW and
lower
SW bands. He used a funky flat shovel to open a slot about 6" deep. I
would
have prefered deeper, but it was his home, copper and effort.

Terry

Thanks for confirming the good MW reports, Will. This sounds like a fun radio to bandscan with, as daytime is the true test for a MW portable.

4214. what became of ILGRadio?

I checked in for an update at http://www.ilgradio.com/ and got the message that it's temporarily (maybe permanently) down. I sure enjoyed using that service in conjunction with my Ergo 4 controller software. What other shortwave databases are listeners using in lieu of ILGRadio? Does anyone have the inside story?

Used to be you could go to RadioShack and get something, not any more,
for a while there you could get a good starter at 75% off retail price.
Now sadly they only give a crap about cell-phones

After rereading Dallas' "MW and LW Noise reducing Antennas", on page 4
I see he uses an 8' ground rod. Perhaps for this antenna configuration
the ground isn't as critical as I thought or that I have experienced
with other antennas, or maybe LA has very good soil conductivity.

I have found the variation used by Mark Connellly, WA1ION, "Another
Look at Noise-Reducing
Antenna Systems (July 1992), to give excellent service.
<http://www.members.aol.com/WA1ION/nrants.pdf>
I did not add R1 and R2 in my final configuration as they made no
detectable difference here.
I have read several complaints of MiniCircuits transformers being
easily damaged by transcients,
and causing IMD from stong/local MW stations. Since my personal
nightmare MW on 770KHz has
never caused any issues and since the tree supporting my antenna was
blasted and the transformer
survived I have my doubts as to MC transformers being all that
delicate.

Another fun antenna configuration to play with is
<http://www.qsl.net/wa1ion/dipole/short_dipole.htm>.
While not exactly a MW DX combo it does offer some utility in
conjunction with a phaser to cancel
local MW stations.

Hmm, yes "This morning..." means absolutely nothing really! I meant: 9th Ocotober 20:51 to 21:13 UTC.

I suppose I was meaning local morning time. The ICE flights always leave Christchurch in the local morning and arrive about five hours later at McMurdo.

Mark.

Hey good to see you on the cutting edge of technology - using the
internet to listen to profit Stair, that great man of God.

Did the profit's prediction about Reagan ever come true?

Wonder if he's been out behind the barn with the "young colored girls"
lately.

You're still invited to MemTown to visit the "young sistahs" at our
racially mixed church.

We'll find you a 'fridge box to sleep in when you get here.

Rasheeka and Tameka and Lareeka LaWanda and RaLanda said they'll make
it a trip you'll remember for a long time.

4228. Do they still make BEEPERS???

First let me said this: I do not need or care for a cell phone. Their too expensive and I find counting minutes a nuance.

When I go online, my telephone line is busy. So I want to have a beeper so that my brother can call the beeper, once I get the beep, I can then call him back.

I had not seen beepers around in stores. People do not even talk about them ever since cell phones took over.

I did a google search on Beepers and Beeper services and hardly nothing comes up.

Now as for the beeper, I would like: A beeper with a few features such as the number that is calling me and date/time. If their are beepers with more features, news/weather report, please let me know about them.

73, SR!

Oh my F-N glub and jeezus H christmas riding a rocket propelled sled in the Nevada Desert folks!!!!
This evening...Comedy Central Networks in the 2nd new episode of SouthPark, did a
parody bit on the 9-11 Conspiracy Theories of Alex Jones and others!!
I was ROLLING ON
THE F-N FLOOR with tears streaming...it was so glub-dammed funny! If you missed this
evening's SouthPark then you missed a great episode as SWL's like me who occasionally
listen to the outright KOOKS on Domestic Shortwave Radio would have found this
episode this evening to be up-roarously funny! It may be repeated in the week. Do your
homework and find out on CC's website under schedules for SouthPark.
Episode: "Mystery of The Uninal" - 'The world's biggest conspiracy of all time will finally be uncovered when Eric Cartman exposes the true culprit behind the September 11th attacks.'

This isn't the right group for this (though I don't think there even is
one,) however, try doing a search for "pagers" instead of beepers... There
is TONS of stuff out there. Heck even beepers brought up a fairly huge
list, don't know why you got "hardly nothing."

Global Warming: The Chilling Effect On Free Speech
http://www.spiked-online.com/index.php?/site/article/1782/

Earth travels around the Sun and in the tilt of its axis are associated with
episodes of global cooling.
...
The "pulses of turnover," [extinction] the scientists determined, occurred
mainly at times when the different cycles left Earth a colder world.
...
Previous studies have invoked climate change to explain mammalian species
turnover, but they have been challenged or only partly supported by other
research.
...
...it may be good news for both mice and men that the climate system has
changed significantly in the last three million years.
...
Ever since the establishment of the northern ice cap, Dr. van Dam said, the
climate system has been reacting differently, as reflected in the succession
of ice ages.

I was using the XM schedules for what little I could get off the
shortwave for North Am., and it's been the Americas schedule, including
the Caribbean stuff, at least until the last season change, (when it
wasn't worth downloading it).

The real irritant is the castrated PRI schedule which allocates only 1/2
hour a day for a limited selection of the 1 1/2 hours of documentaries/
science/culture per day programming. And those blocks are repeated three
times, so there's 4 more hours of rerun news on your local FM compared
to the shortwave feeds.

> Anyone who still believes that BBC is an impartial news source, needs
>to rethink that position.

Yea, the "Free Market Fundamentalists" in the business unit give
me a pain. And they'll never directly say anything that puts their
paymasters in the Foreign Office in a bad light. And they're way too
prone to go to the think tank arms of the Republican Machine when the
they need a pugnacious propagandist to balance out somebody who lives
in the real world.

Not so in the book. But I have heard other "experts" make the claim that
Muslim liberal elites are preparing their populace for serious compromise in
regards to Israel. They also claim the current terrorist violence will wear
the Muslim streets down and prepare the populace for a "big change" - a
possible surge in anti-Islamic extremism along with regime changes.

Last line:

"The R&O does not include action on WT Docket 05-235, the proposal to eliminate Morse code as a testing requirement. FCC action on that Docket is still pending."

I for one hope that they will continue to at least require 5 WPM testing for all ARO licences.

Russia: 3rd Deadliest Country in the World for Journalists

In Russia, the best journalists don't necessarily get recognized with medals, but rather with coffins.

And the murder of internationally renowned Russian journalist Anna Politkovskaya last Saturday in her Moscow apartment building is a prime example of this sad development in post-Soviet, "democratic" Russia, clearly showing to what Third World lawless depths that Eastern European country has sunk. The forty-eight year-old investigative journalist for the newspaper Novaya Gazeta was found shot in the head in her apartment elevator in a contract-style murder for apparently challenging authority and exposing human rights abuses in Chechnya. This tragic event has shocked Russia and put into question the fledging foundations of a free press in that country, recalling the darkest days of the Cold War era when an all-powerful secret police simply caused people to disappear.

Clinton's New Glow Job

With the Democrats' full-throated moralizing of late, I'm almost tempted to vote for them - although perhaps "full-throated" is the wrong phrase to use with regard to Democrats and sex scandals. The sudden emergence of the Swift Butt Veterans for Truth demonstrates that the Democrats would prefer to talk about anything other than national security.

Unfortunately for them, the psychotic Kim Jong-Il seems to be setting off nukes, raising the embarrassing issue of the Clinton administration's 1994 "peace" deal with North Korea.

At least with former Rep. Mark Foley, you could say the Democrats' hypocritical grandstanding was just politics. But in the case of North Korea, Democrats are resorting to bald-faced lies.

Current New Mexico governor and former Clinton administration official Bill Richardson has been on tour, bragging about the groundbreaking Clinton administration negotiations with North Korea - keeping his fingers crossed that no one has access to news from 1994.

In 1994, the Clinton administration got a call from Jimmy Carter - probably collect - who was with the then-leader of North Korea, saying: "Hey, Kim Il Sung is a total stud, and I've worked out a terrific deal. I'll give you the details later."

Clinton promptly signed the deal, so he could forget about North Korea and get back to cheating on Hillary. Mission accomplished.

Under the terms of the "agreed framework," we gave North Korea all sorts of bribes - more than $5 billion worth of oil, two nuclear reactors and lots of high technology. In return, they took the bribes and kept building nukes. This wasn't difficult, inasmuch as the 1994 deal permitted the North Koreans to evade weapons inspectors for the next five years.

Yes, you read that right: North Korea promised not to develop nukes, and we showed how much we trusted them by agreeing to no weapons inspections for five years.

The famed "allies," whom leftists claim they are so interested in pleasing, went ballistic at this cave-in to North Korea. Japan and South Korea - actual allies, unlike France and Germany - were furious. Even Hans Blix thought we were being patsies.

If you need any more evidence that it was a rotten deal, the New York Times hailed it as "a resounding triumph."

At the time, people like William Safire were screaming from the rooftops that allowing North Korea to escape weapons inspections for five years would "preclude a pre-emptive strike by us if North Korea, in the next U.S. president's administration, breaks its agreement to freeze additional bomb-making."

And then on Oct. 17, 2002 - under a new administration, you'll note - the New York Times reported on the front page, so you couldn't have missed it: "Confronted by new American intelligence, North Korea has admitted that it has been conducting a major clandestine nuclear weapons development program for the past several years."

So when it comes to North Korea, I believe the Democrats might want to maintain a discreet silence, lest anyone ask, "Hey, did you guys do anything with North Korea?"

But by Richardson's lights, the only reason Kim Jong-Il is testing nukes is because Bush called him evil. He said, "When you call him axis of evil or a tyrant, you know, he just goes crazy." This is the sort of idiocy you expect to hear from an illiterate like Keith Olbermann, not someone who might know people who read newspapers.

Richardson also blames the war in Iraq, bleating that the poor North Koreans feel "that there's too much attention on the Middle East, on Iraq. So it's a cry for attention." If Kim just wanted our attention, he could have started dating Lindsay Lohan. But Richardson says Kim "psychologically feels he's been dissed, that he's not treated with respect."

Damn that Bush! If only he had ignored the crazy Muslims and dedicated himself to sending flowers (and more nuclear reactors!) to North Korea, we could be actively helping Kim develop his nukes like the Clinton administration did.

As Richardson said, Kim "wants us to negotiate with him directly, as we did in the Clinton administration."

To go on TV and propose negotiating with North Korea like Clinton did without ever mentioning that North Korea cheated on that agreement before the ink was dry would be like denouncing American aggression against Japan in 1942 and neglecting to mention Pearl Harbor. Anyone who is either that stupid or that disingenuous should not be allowed on TV.

When pressed by CNN's Anderson Cooper about the failed deal, Richardson lied, claiming the 1994 deal prevented the North Koreans from building nukes "for eight years" - i.e., right up until the day the New York Times reported the North Koreans had been developing nukes "for the past several years."

Kim is crazier than any leader even South America has been able to produce. In fact, he's so crazy, we might be able to get the Democrats to take action. Someone tell Nancy Pelosi that the "Dear Leader" is an actual pederast. Then we'll at least be able to read his instant messages.

Muslim liberal elites :-) You don't often hear those terms together,
and rarely do we hear the words "liberal elites" used in an ostensibly
positive sense. Do you really mean "anti-Islamic extremism" or is it
more of a pro-moderation stance? It is hard to imagine a wholesale
revolt against the religion, but something where people get tired of
the violence of the wackos and just start getting tough on them
certainly sounds feasible...and would be most welcome.

Regime changes would be sweet - I hope there's something to it. Almost
anything would be better than what many nations have there, although a
switch to Marxism (or worse) would be lousy.

Is that episode:

a) A new one??

b) Re-aired tonight....as they often do?

Thanks!

Bill

It was a friggin' joke, ALEX!!!!!!!!!!!!!!!!!!

But I JUST HEARD, at 1:16PM EDT, on the Rush Limberger program, that
Alex Jones IS claiming that this plane crash is a conspiracy to focus
people on 9-11 before the elections!!!!!

Alex! What I printed was a joke! To quote the famous words of Linus
VanPelt of "Peanuts" fame; "Don't you know sarcasm when you hear
it????"

Alex takes it a step further, and states that they used a "sports
figure" so it would remain in the news for a longer period of time than
the average shmuck.....

Remember! Your Liberty Net Nuts support Alex "Judas" Jones......

4262. Communist China's Charm Offensive

Newsgroup: rec.radio.shortwave

Communist China's Charm Offensive

In October 2003, George W. Bush arrived for his first visit to Australia, a country that for a half-century has been one of America's closest allies. Australian soldiers fought alongside Americans in the jungles of the Pacific theater in World War II and on the front lines in Korea and Vietnam. During the long decades of the cold war, Washington relied on Australia as an outpost of freedom in a region threatened by Communism. Today, in Iraq, Australian soldiers again serve at the side of the American military. To top it off, President Bush enjoys warm personal relations with Prime Minister John Howard.

But on his visit three years ago, the President was in for an unpleasant surprise. Thousands of protesters filled the streets in Sydney and Canberra, scuffling with police and staging mock trials of the American president. Inside the Australian parliament, Bush's remarks were interrupted by heckling senators, who had to be escorted from the chamber. His speech done, he was met outside by another chorus of booing critics.

The tumult surrounding Bush's visit was especially notable because, just days later, Australia would offer a vastly different welcome to another president-Hu Jintao of Communist China. Hu toured Australia like a hero. Few protested Communist China's human-rights record. In parliament, no one disturbed his windy paean to the future of Australia-Communist China ties. Foreign Minister Alexander Downer spoke words of fulsome praise. Before Hu left, the two nations had signed a framework for a future free-trade deal.

Some of the anger toward Bush could be blamed on the war in Iraq, which has been unpopular in Australia. But the contrast in treatment between the American and Communist Chinese presidents had a deeper source. For most of the postwar period, Australians had embraced the U.S. and viewed Communist China warily. Some politicians even argued that Australia should ignore Asia altogether. Today, the situation is much altered. In a poll conducted in early 2005, barely half of Australians reported positive feelings about the United States, while some 70 percent saw Communist China in a favorable light.

In Australia, Communist China is winning friends, often at America's expense. The same could be said of other places in the world as well.

Beijing began to think of itself as a bigger player on the world stage a decade ago. Years of strong economic growth had fostered greater self-confidence, and a new generation of more internationalist leaders had risen within the Communist party. At the same time, the ruling elite had managed to coopt potentially disruptive forces like the Internet and satellite television-forces that foreign scholars had wrongly predicted

would pry open Communist Chinese society. The regime also set higher wages for academics, created lavish new state-supported housing for the upper-middle class, and recruited private-sector elites into the party-moves calculated to convince intellectuals that their interests lay with the Communist government. Though Communist ideology no longer stirred much passion, the party thus succeeded in generating a strong sense of nationalism in the country's growing class of educated urbanites.

For many American observers, the most alarming aspect of these developments lay in Communist China's newfound military assertiveness and ambition. Starting in the mid 1990's, Beijing escalated its efforts against Taiwan, launching missiles into the Taiwan Strait near the island's cities. It also occupied reefs in the South China Sea and began to develop them for military purposes, thus impinging on territory claimed by Vietnam, the Philippines, and other nations in the region. In a much-discussed article in Commentary, "The Struggle for Mastery in Asia" (November 2000), Aaron L. Friedberg suggested that, over the coming decades, the United States might well "find itself engaged in an open and intense geopolitical rivalry with the People's Republic of China."

But Communist China's military adventurism backfired. Countries across Asia united to condemn Beijing's behavior and stepped up their military links with the U.S. The Taiwanese responded by electing a more pro-independence candidate, and President Clinton sent aircraft carriers into the Taiwan Strait. Needless to say, this was not what Communist China had wanted or expected. Younger Communist Chinese officials began to recognize that their country could not match America's military might-a conclusion strikingly confirmed in late 2001 when American forces were quickly deployed to Afghanistan and won a lightning victory over the Taliban.

Another key event in shaping the outlook of Communist Chinese decision-makers lay in the opposite direction: the favorable international response to Beijing's role in the Asian financial crisis of the late 1990's. Communist China refused to devalue its own currency, at a potential cost to its own export competitiveness, on the grounds that doing so would exacerbate devaluations in Thailand and Indonesia. Foreign Minister Tang Jiaxuan described the decision as a "major sacrifice," an instance of standing up for other Asian nations. Although Beijing's policy mattered less to the eventual resolution of the crisis than did the bailout ultimately organized by the U.S., Japan, and other powers, its seeming devotion to common interests won the region's gratitude. In the words of Rodolfo Severino, secretary-general of the Association of Southeast Asian Nations, Communist China emerged from the crisis "smelling good."

The lesson was not lost on Beijing. Though far from resigned to pacifism-as Donald Rumsfeld has emphasized, Communist China's defense budget has grown considerably in recent years-the Communist leadership began to define an idea of longer-term "comprehensive national power," encompassing a range of economic, cultural, and diplomatic levers of influence. This strategic shift, a more limited version of what the American political scientist Joseph S. Nye, Jr. has called "soft power," has been neatly described by

Wang Huning of the Communist party's policy-research office: "If one nation-state is able to make its power appear reasonable in the eyes of another people, then its desires will encounter less resistance."

Among the tools available to Beijing in exercising its soft power, the most obvious are socioeconomic. Riding the wave of its astonishing growth over the past decade, Communist China now routinely portrays itself not only as a model for the world's poorest countries but as their most vocal and sympathetic international ally. As one recent government white paper trumpeted, Communist China "has created a miracle by feeding nearly 22 percent of the world's population on less than 10 percent of the world's arable land. . . . The Communist Chinese government has lifted 220 million people out of poverty."

Such claims are now central to the country's public diplomacy. Cheng Siwei, vice chairman of the National People's Congress, has declared, for example, that Communist China and Latin America are natural partners since "both belong to the developing world and have identical or similar views on many issues." As Barry Sautman of the Hong Kong University of Science and Technology has pointed out, a similar approach characterizes Communist China 's dealings with Africa, where Beijing contrasts itself to Western nations that have "ignored African aspirations for a more equitable international distribution of wealth and power."

The socioeconomic model that Communist China sells as an answer to these supposed historic wrongs is one of gradualism. It consists of three basic elements: a certain degree of openness to private enterprise, a large state sector, and a concerted effort to forestall democratic reform. As an alternative to the aggressive free-market program promoted by the U.S. since the 1990's-the so-called "Washington consensus"-the Communist Chinese model has won wide support, especially from authoritarians of diverse stripes. The gradualist approach to liberalization gives such rulers the time and the maneuvering room to figure out how to coopt new business elites. Like the Communist party of China, they hope to modernize their economies while remaining in firm control of the state.

Evidence of Beijing's success can be seen in the large official delegations from Vietnam, Cambodia, Brazil, and various African nations that now regularly visit Communist China at the government's invitation. Opinion leaders from abroad attend conferences, tour the country to view its economy at work, and build contacts with the Communist party. By wooing these elites, Communist China is able to diminish fears not only about the effects of its own rapid growth on other economies but about its wider ambitions as a global power.

More surprising, perhaps, is the degree of popular support that the Communist Chinese model commands around the world. As the recent success of some leftist candidates in Latin America attests, that continent still feels an attraction to statism. In one recent poll, a mere 35 percent of Latin Americans would permit the private sector to control economic activity. Comparable views can be found in Africa. As Barry Sautman reports, even the head of the African Development Bank has suggested that Communist China's

statist ideas can teach the continent how "to move from low- to middle-income status," while a leading 'Nigerian' writer lauds Communist China for "not brand[ing] 'subsidy' a dirty word."

Communist China's economic help is hardly confined to advice and educational junkets. As a trading partner, Communist China already rivals the U.S. in Southeast Asia and is constantly expanding its market share elsewhere, especially in the purchase of raw materials. Beijing has also developed a substantial and fast-growing foreign-aid program, in 2004 giving away over $1.5 billion in Asia and some $2.7 billion in Africa. Finally, though a relatively small player in terms of overseas investment, Communist China is seeking opportunities in that realm as never before, and within a decade is likely to become the biggest investor in many of the developing countries on its borders.

More important than the absolute size of its holdings abroad is their clear relationship to Communist China's national interests. Because so many of the country's large firms still maintain ties to the state, Beijing has been able to push them into overseas sectors of particular strategic value. Over the past decade, Communist China's Ministry of Foreign Trade and Economic Cooperation has selected some 30 top companies to take the lead in foreign investment. A key incentive is the funding they receive from state-controlled banks. In 2004, according to the consulting firm Accenture, the Communist Chinese telecommunications giant Huawei was given a $10-billion low-cost loan to help it expand its global reach.

At the top of Communist China's list in this regard has been energy, ever-increasing amounts of which are needed to fuel the country's booming economy. The heads of state-owned natural-resource firms speak openly of the investments that Beijing directs them to make abroad. This campaign has paid off handsomely, with Communist Chinese companies lining up a range of eager partners in countries possessing first-tier oil and gas fields. In South America, the China National Petroleum Corporation (CNPC) has established a joint venture with the state-owned Petroleos de Venezuela and, through a subsidiary, has bought a stake in Peru's Pluspetrol. Last year CNPC purchased PetroKazakhstan, one of the biggest oil companies in Central Asia, for $4.18 billion. Communist Chinese firms have also become the biggest foreign investor in Sudan's sizable oil industry, and have concluded a deal to develop one of Iran's major oil and gas fields.

As a political and diplomatic matter, the defining feature of Communist China's effort to cultivate new allies has been its ostensible readiness to offer friendship with no strings attached. In visits abroad, Communist Chinese leaders enunciate a doctrine of "win-win" relations. Communist China will be everyone's friend, listening to the needs and desires of others without asking for anything in return. By emphasizing "noninterference," Communist China has once again sought to create a sharp contrast between itself and the U.S.

The America painted by Communist Chinese officials is an arrogant hegemon, slapping sanctions on other states, refusing to sign or abide by international agreements, and determined to force liberalization upon

societies unready for it. Countries that ally with Communist China, by contrast, can avoid the onerous economic and political reforms demanded by Washington.

There is no denying that, combined with socio-economic aid or investment, this diplomatic approach has paid off, in ways both small and large. Chinese-language study has skyrocketed internationally, and foreign students now clamor to attend Communist China's elite universities. Today Communist China enrolls twice as many Indonesian students a year as does the United States, while welcoming some 13,000 students from South Korea, America's staunch ally. Beijing has also expanded and professionalized the output of its Communist party-controlled newswire, Xinhua.

http://www.rsf.org/article.php3?id_article=15172

Available in many languages, it is now picked up by newspapers around the world, its dispatches often treated with the same respect accorded to those of Reuters or the AP.

When Communist Chinese dignitaries travel, especially in the developing world, they are greeted with the sort of welcome and access once reserved for Americans, Japanese, and Europeans. In April 2006, on his first state visit to Saudi Arabia, President Hu was given a lavishly rococo reception, an honor paid in the past almost exclusively to U.S. Presidents. In 2004, President Luiz Ignacio Lula de la Silva in Brazil spoke warmly in Hu's presence of his new friend and shared wishes for "a partnership" that would serve "as a paradigm for South-South cooperation."

Still more amazingly, Communist China's charm offensive has made a strong impression on international public opinion. In a 2005 BBC poll of 22 nations, 48 percent rated Communist China's role in the world as mainly positive, with only 30 percent seeing it as negative. A follow-up poll, released in February 2006, revealed a rise in positive feelings in nations ranging from Brazil to Indonesia to Nigeria, even as the public standing of the United States deteriorated.

The effects of Communist China's diplomatic outreach can be registered perhaps most sharply in its own region, where its influence is felt in older groupings like the Association of Southeast Asian Nations and in newer pan-Asian institutions, like the East Asia Summit, which it has helped to create. In the longer run, Beijing may try to convert some of these partnerships into more formal alliances. In the Philippines, Beijing is already pushing for much closer military-to-military relations, of the sort Manila now enjoys with America. It has also pressured Singapore into signaling that it would not come to the aid of Taiwan in any future conflict with Communist China.

As President Bush's 2003 sojourn to Australia suggests, Communist China has even succeeded in driving a wedge between the U.S. and its closest regional ally. For fifty years, these two countries have been bound together by the ANZUS treaty, which commits each to come to the assistance of the other in wartime. But Australian politicians have started to back away from ANZUS. In

August 2004, Australian Foreign Minister Downer, speaking in Beijing, said that ANZUS obligations "could be invoked only in the event of a direct attack on the United States or Australia"-a comment clearly meant to suggest that Australia would not help the U.S. in a war with Communist China over Taiwan.

Then there is Central Asia. There, Communist China played a leading role in the founding five years ago of the Shanghai Cooperation Organization (SCO), a group that includes Russia, Kazakhstan, Uzbekistan, Tajikistan, and Kyrgyzstan. The rest of the world paid little attention, but since 2001, Central Asia has assumed new international prominence. It is both rich in oil-Kazakhstan alone produces more than a million barrels a day-and adjacent to flashpoints like Afghanistan and Iran. This is why, after 9/11, Washington hurried to secure basing rights in Uzbekistan, Tajikistan, and Kyrgyzstan.

Communist China's response to the American presence in the region has been quietly to expand its financial assistance and trade. More important, when American officials criticized the Uzbek government for its crackdown on the opposition in 2005-a move that culminated in the massacre of over 400 people in the city of Andijan-Communist China quickly offered blanket support for the authoritarian regime. At the SCO summit in July 2005, the fruits of Communist China's policy could be seen in a joint communiqu&#65533; declaring the group's opposition to any country intent on "monopolizing or dominating international affairs" and demanding that Washington provide a timeline for withdrawing American forces from members' territory.

Some China-watchers might find a certain reassurance in Beijing's choice of the path of soft power over military confrontation. After all, no war was ever started because of competition between Chinese- and English-language schools, and the tendency of modern commerce is to discourage conflict among nations with deeply intertwined economies. More to the point, though Communist Chinese soft power has certainly grown, it is still no match for that of the U.S., with its enormous financial resources and dynamic popular culture.

Optimists might even point to indications of a willingness on Communist China's part to use its newfound prestige and influence in beneficial ways. Thus, Beijing has demonstrated a genuine desire to resist narcotics trafficking (especially from neighboring Burma, a supposed ally) and other nontraditional security threats, and has sent Communist Chinese peacekeepers to hot spots like Haiti and Liberia under the UN flag. On occasion Communist China has even shown a readiness, at least in theory, to help mediate regional conflicts like the current stand-off over North Korea's nuclear-weapons program.

But no less evident are darker implications. Among the core American interests most threatened by Beijing is access to oil. The U.S. receives a large share of its oil from Latin America and West Africa, markets where Communist China has been busy striking preferential deals. As competition for this resource becomes ever more heated, not only will serious economic

consequences ensue but the unstable and politically unsavory suppliers of the Middle East will be placed in an even stronger position to throw their weight around than they are now.

Globally, there is also the danger of imitation. To the extent that poorer nations follow Communist China's model of development, they are likely to reproduce both its disastrous environmental record and its hostility to independent labor unions and other accoutrements of a free civic order, a combination with dire effects on long-term social health. Nor is state control in the most backward corners of the world likely to produce anything like Communist Chinese-style growth. Though corruption is endemic in Communist Chinese officialdom, its negative effects are offset by the developing rule of law there (especially in the eastern cities) and by the country's need to fight graft in order to attract foreign investment. In parts of the developing world, where the rule of law is at best a distant ideal, the Communist Chinese model can only intensify corruption.

Finally, the Communist Chinese posture of "noninterference" can be a cover for something more ominous. The fact is that, in the developing world, Communist China has served as a positive impediment to Western efforts to bring about vital reforms. In 2005, for example, IMF officials were on the verge of concluding a deal with the Angolan government in which new loans would be tied to intensive monitoring to ensure that aid actually reached the poor. At the last minute, Angolan officials broke off the talks; Communist China had stepped in, offering loans and credits worth as much as $5 billion-with no conditions.

Communist China's "noninterference" has also helped to preserve some of the world's worst regimes-governments that often happen to be both alienated from Washington and flush with natural resources. Indeed, Communist China appears deliberately to target such nations, whose ranks include not only Saudi Arabia, which has considered building a strategic oil reserve for Communist China, but also Venezuela and Bolivia, whose anti-American leaders, Hugo Chavez and Evo Morales, have been aggressively courted by Beijing.

During the sham elections in Zimbabwe in 2005, no major international power would endorse the reelection of Robert Mugabe-with the exception of Communist China. In fact, Beijing actively helped Mugabe win, providing the aging dictator with agricultural equipment, electricity transformers, and planeloads of T-shirts bearing the insignia of his party. Communist China also reportedly supplied expert assistance to jam the radio broadcasts of the Zimbabwean opposition and monitor its Internet communications.

In the case of Iran, the Communist Chinese have shown no interest in containing the nuclear ambitions of President Mahmoud Ahmadinejad. While expressing concern about the program, Beijing has hindered efforts by the UN Security Council to sanction Iran. At the same time, as if to bid defiance to the U.S., it has hosted Ahmadinejad in Shanghai and expanded its energy interests in Iran, tying itself even more closely to the Islamist regime.

Worldwide, Communist China's support for dictators hurts the populations of the affected nations while endangering regional and international security. In supporting self-aggrandizing demagogues like Robert Mugabe and Hugo Chavez, Communist China fosters instability in the world's fragile, impoverished continents. By reducing pressure on rogue actors like Sudan and Iran, Beijing undermines any real prospect of political and social reform, all but guaranteeing that they will continue to be engines of extremism and global terror.

For now, the United States still enjoys some leverage over decision-makers in Beijing, who prize their high-level bilateral dialogue with the White House. But as Communist China's economy develops and becomes less reliant on foreign capital, America's influence over its behavior will diminish even more steeply than it already has.

All of which is a sharp reminder that Communist China remains not only an economic rival but a looming political danger. In many respects, indeed, Communist China represents a more complicated potential adversary than the Soviet Union ever was. Our struggle with the hidebound USSR certainly had its "soft" side, involving the contest of ideas and of political and economic ideals. But the main struggle was in the arena of hard power, of military might and determination, and in the end this is what proved decisive. Countering the new Communist China is a task requiring a kind of intellectual and ideological agility at which Americans are not much practiced. If democratic values are to prevail globally, we need even more rapidly to develop and to give life to some unaccustomed instruments of American influence.

Hmmm, let me see. Every single one of those Pages were of adult legal age - no crime there.

Hmmm, let me see. Nothing from the Socialist ACLU - interesting.

Hmmm, let me see. No response from the Neo-Liberal...Gay & Lesbian community - this is very interesting.

Will Impeached Clintoon come to his defense? - bwaHAHAHA!!!

Hmmm, will "bobandcarole" bobandcarole202@hotmail.com provide a link for the source of their propaganda lies?

Stay tuned...

"bobandcarole," <bobandcarole202@hotmail.com> wrote in message news:1160674843.406438.156120@h48g2000cwc.googlegroups.com...

No idea, sometimes it will be posted fairly quickly, sometimes a week or so.
Generally not until after the beginning of the new period though.

Liberal in this region of the world. Liberal in terms of religious
reformation.
Liberal in the classic sense. Not at all like the
Left-wing,Neo-Liberal,"Progressive",Socialist,Communist's have high-jacked
and stained the term Red in the West.

> Do you really mean "anti-Islamic extremism" or is it

Anti-"Islamic extremism" does not mean a religious revolt.
This Islamic extremism is considered a cult by liberal Muslims.

> Regime changes would be sweet - I hope there's something to it. Almost
> anything would be better than what many nations have there, although a

Der Fuehrer Mahmoud Ahmadinejad wrote:\

> Anti-"Islamic extremism" does not mean a religious revolt.
> This Islamic extremism is considered a cult by liberal Muslims.

Yes, that is the impression I get from the rational Muslims that I know
-

OTOH, a cult can also be defined by how big a segment of the population follows or believes in the practice. For example, Christianity started off as a cult, and now outnumbers its parent religion by a factor of about 50 to 1 (round numbers). If the cult of radical Islam grows to approach a sizeable fraction of the total - or worse yet, a majority - then it ceases to be a cult and becomes either a sect, or else, the basic religion. After this point, the moderate/liberal elements wind up being the outliers - and in that climate, might be at risk as a result.

The number of people who get out there in the streets and act wacko across south Asia is troubling. I know that they are more a vocal small minority than anything else at this point, but it is perhaps hard to know what emotions these demonstrations stir in the minds of Muslims who would otherwise take a much more "live-and-let-live" attitude. If one hears propaganda enough, regardless of how much truth it contains, one may - and some *will* - start to buy into it.

Please oh please Todd, please bring Omega One back to HF. I miss hearing
your shitty 1980's music and your psychotic Hate FCC rants. It's better
than Liberty net. Did your mom take her records and 8-Tracks back? Is
that why Omega One is off the air?

First off dumbfuck, my mom don't have 8 track and records I do.....and
yeah bitch I'm that old...and if you love Hate the FCC rant (after all
we know the FCC are all a bunch of FUCKING lying scum bags) I'll be
more then happy then to flood this USENET with anti FCC Shit. As for
Omega one radio, we are very happy on FM..that way your little gay
boyfriends DeWhorean, Roger "I'm a bastard child" and Steve "I jack
off over dead daughters grave" Robbieson can't harass or jam my signal

your pal

Hi Terry,

I tried a 4-foot ground rod because that's what Dallas showed in the antenna diagram for his article. I do see now that his older article (which he reproduces as an addendum to the newer version) shows and describes an 8-foot ground rod, however.

I have a Bentonite-enhanced ground rod about 12 feet away from the 4-footer. I previously to use it for grounding the shield of a EWE antenna feedline, but it's not currently in use, so I might run a heavy wire to that one and give it a try. It's a good ground, and I've always had success with Bentonite enhancement. It's such a hassle to dig the larger hole to hold all the powdered Bentonite and water slurry, but the results can be worth the effort.

In Seattle I've bought 50 lbs. of Bentonite for for just $13, but that was a few years ago. I used to get all I wanted for free, as my wife's home town in Wyoming has a number of Bentonite processing plants in the area. They would give away slightly ripped bags of the stuff to anyone crazy enough to ask for it!

Before I went completly nuts and put the perimenter ground ring in , I
used clumping
kitty litter, which uses a bentonite and baked/ground clay mixture. I
poured the
kitty litter in to a depth of several inches and added water and
repeated until it was
up to 5 or 6" fro the surface. I also had a capped 1" PVC pipe with
holes drilled
every inch or so that during realy dry summers I would route filtered
grey water from
the washing machine. The ground ring is significantly better as in
lower over all
noise floor, especially for VLF/whistler reception.

The hardest part was convincing the telephone company to use my ground.
They wanted to use a diky 4' ground rod.
Altel oh ya.
Two cans on a string would work as well.

[Posted for QSL info]

Good evening, beloved pirate radio fans!

It's snowing off and on in the midwest. Is that insane or what? Maybe we'll skip the Halloween show and go straight for Christmas!

The Crystal Ship will be on the air tonight, on parallel frequencies of
3275 kHz // 6875 kHz
commencing about 2330 UTC til ?*

It's back to the 60s tonight: Love, war, peace, flowers, Vietnam, along comes mary and my green tambourine.

Our QSL Policy:
We will pay postage for first-time QSLers who Email reception reports with their mailing address to tcsshortwave@yahoo.com If you wish to receive further QSLs, please mail your reception reports along with at least two first class stamps for US addresses, ($1 US or two IRCs for non-US) to

The Crystal Ship
PO Box 1
Belfast, NY 14711

While we have at times sent multiple QSLs and picked up the postage cost, we really can't afford to continue to do that on repeat QSL requests.

Pending QSLs:
For those waiting on QSLs, we will have a big batch going out shortly. Sorry for the wait, but we had run out of the additional printed materials that we usually send out with them and had unusual difficulties getting more....

Peace.

73s and FIGHT for FREE RADIO!

The Poet
The Crystal Ship

On the other hand, all it takes is one Taylorville resident to put up
a low power FM transmitter, and I know people in your area who would
be willing to do that for me. Like me, they belong to the Illuminati,
and most of them will gladly help me out.

Don't press your luck. Luck, plus being an insignificant small fry,
is the only thing that has kept you out of court.

Luck apparently ran out for Roger this week. Some skinheads he is
supposed to have insulted on a web board somewhere are rumored to have
paid him a visit a few days ago. Don't make the same mistake he did
and mouth off at people you don't really know. Some of them might be
violent.

Beepers can barely (and I mean that in the smallest sense) be considered a "radio". They are a receiver, but operate FAR from the frequencies that could even be remotely considered falling into the "shortwave" band...

Thus, not the right group for your request. Even so, I answered it, so be happy...

Why don't you take your "skinheads" along with your bravado and go find
yourselves some raghead Islamo-facists to rough up. You would have a "field
day" in Detroit. You would likely make it on CNN.

Cults such as Islamic extremists can only survive under dictatorships and
facist regimes.
Which places them in direct confrontation with the free world. The free
world is not about to disappear anytime soon.

> The number of people who get out there in the streets and act wacko
> across south Asia is troubling. I know that they are more a vocal

These are the last days of M.E. dictatorships. When a vicious animal is
cornered it becomes most dangerous. The violence stired up by the soon to be
extinct Islamo-facists are its final acts in desperation. It is at this

time that the cult is most vulnerable. The whip of strength will ultimately subdue the beast and allow a clean blow for the final kill.

4314. Networks Biased in Reporting Sex Scandals

Newsgroup: rec.radio.shortwave
Date: 2006-10-13 15:42:31 UTC
From: Seeing-I-dawg <woof@woof.woof>
Message-ID: <12ivcufrr95fa17@corp.supernews.com>
Source record: 94639
Cross-posted to: alt.politics.homosexuality,alt.education,alt.politics.republicans,can.politics,rec.radio.shortwave

The establishment media has a double standard when reporting the sexual proclivities of Republicans versus Democrats, a media watchdog group found in a report on the Mark Foley scandal.

Over the past 12 days, more than 150 stories on Foley aired on morning and evening news shows on ABC, CBS, and NBC, the Media Research Center, parent company of Cybercast News Service, found. Compare that to 19 stories over one year in the scandal involving Mel Reynolds - a Democratic congressman from Illinois convicted in 1995 of having sex with a 16-year-old campaign worker.

"The numbers are clear and shocking: 152 stories on Mark Foley over 12 days, yet only 19 stories on Mel Reynolds over an entire year. This double standard reeks of political partisanship and proves how far the liberal media will go to downplay the sexual degeneracy of a liberal Democrat and trumpet the sexual degeneracy of a Republican," said MRC President Brent Bozell in a statement.

Reynolds also conspired to have sex with the teen's 15-year-old friend, solicited child porn, and was convicted on 12 counts of sexual assault and obstruction of justice.

CBS did two stories on Reynolds' 1994 indictment (two anchor briefs), while NBC did one evening story and ABC didn't touch on the indictment at all, the MRC found.

And when Reynolds was convicted in 1995 on all 12 counts, NBC did 10 stories (seven anchor briefs, a morning story and two morning interview segments), CBS did five (four anchor briefs and a full morning story) and ABC reported on it once.

Foley resigned recently amid reports that he traded sexually inappropriate messages with an underage male participant in the congressional page program.

NBC did a total of 56 stories on the Foley scandal (20 on the evening news and 36 in the morning), compared to 50 on ABC (20 in the evening and 30 in the morning) and 46 on CBS (15 in the evening and 31 in the morning).

"The Republican is accused of repugnant behavior, via e-mail primarily, toward minors. The Democrat was charged, prosecuted, convicted and sentenced to prison for very real sexual assault toward a minor along with obstruction of justice," noted Bozell.

"The same networks that gave absolute minimal coverage to the Democrat are now flooding the airwaves with stories about the Republican, on the eve of

the elections. If this isn't evidence of a liberal media agenda, nothing ever will be," Bozell added.

The MRC looked at stories on the Foley scandal from Sept. 29 when the story broke to Oct. 11. A fraction of the stories were brief anchor updates.

4319. Soros, Foley and the FBI

Newsgroup: rec.radio.shortwave
Date: 2006-10-13 16:34:14 UTC
From: Seeing-I-dawg <woof@woof.woof>
Message-ID: <12ivfvh2ul8c10@corp.supernews.com>

Soros, Foley and the FBI

A leftist group with strong ties to the Democratic Party and to radical billionaire George Soros
http://www.discoverthenetwork.com/individualProfile.asp?indid=977
may have engaged in criminal obstruction of
justice in the Foley case. FBI investigators have accused the group CREW of concealing evidence of Rep. Mark Foley's sexual misconduct over a period of several months.

George Soros' Open Society Institute
http://www.discoverthenetwork.com/funderProfile.asp?fndid=5181
contributed $100,000 to CREW in January 2006.

"CREW is little more than a front for George Soros' Shadow Party," charges David Horowitz. "CREW has been withholding this evidence for months, apparently in order to release it just before the election. It is well known that Soros keeps a tight rein on groups that he funds. He and his Shadow Party cannot evade responsibility for CREW's actions."

The Shadow Party
http://www.discoverthenetwork.com/groupProfile.asp?grpid=6706
is a network of private political groups, organized
and led by George Soros, which exerts a powerful but hidden influence over the Democratic Party, according to Horowitz.

The workings of this network are described in the newly-released New York Times bestseller THE SHADOW PARTY: HOW GEORGE SOROS, HILLARY CLINTON AND SIXTIES RADICALS SIEZED CONTROL OF THE DEMOCRATIC PARTY, by David Horowitz and Richard Poe (Thomas Nelson, 2006).

At a press conference on Monday, October 2, CREW announced that it had been holding incriminating e-mails revealing Foley's sexual misconduct since at least July 2006. CREW said it turned these e-mails over to the FBI in July, but the FBI failed to act.

The FBI counters that CREW provided only edited versions of the e-mails, and refused to surrender the unedited originals. Investigators say that CREW refuses to divulge where it got the e-mails, and may have been holding them since at least April 2006 - months before CREW alerted the FBI of their existence.

In response, CREW has accused the FBI of lying, thus pitting George Soros' Shadow Party against America's top federal law enforcement agency, in a
head-on confrontation.

http://www.frontpagemag.com/blog/BlogEntry.asp?ID=732

Soros, Foley and the FBI

THE SCANDAL over Congressman Mark Foley's sexual misconduct has generated some unexpected blowback. It has pitted George Soros' Shadow Party against the FBI.

The Soros-funded group CREW has effectively declared war on America's top federal law enforcement agency. CREW has called on the Justice Department to investigate the FBI. In an October 5 statement, it accused the Bureau of having "fabricated and disseminated" falsehoods about CREW, as part of an FBI "cover-up" of the Foley scandal. (1)

In the war of words now raging between CREW and the FBI -- CREW through its press releases, and the FBI through anonymous press leaks - each accuses the other of obstructing justice in the Foley investigation.

CREW started the fight with a surprise announcement on October 2. It stated at a press conference that it had obtained some of Foley's incriminating e-mail correspondence on July 21 - two months before ABC News broke the Foley story on September 28. CREW claimed that it had sought to interest FBI investigators in the Foley e-mails, but to no avail.

"Since the FBI has known about Rep. Foley's emails since July, the question arises: Did the administration help to cover up Rep. Foley's conduct and leave a potential sexual predator on the loose?..." asked CREW executive director Melanie Sloan. "The American public deserves to know not just how and why members of Congress failed to take action to protect the youngsters entrusted to the care of the House of Representatives, but also why the FBI - an agency charged with protecting the public - failed to safeguard other youngsters from a potential sexual predator." (2)

FBI sources retort that it was CREW, not the Bureau, that was playing games with the Foley evidence. According to the Washington Post of October 5:

".unidentified Justice and FBI officials told reporters that the e-mails provided by CREW were heavily redacted and that the group refused to provide unedited versions to the FBI. One law enforcement official - speaking on the condition of anonymity to discuss an ongoing investigation - also told The Washington Post the FBI believed that CREW may have received the e-mails as early as April and that the group refused to tell the FBI how they were obtained." (3)

CREW says the G-men are lying. It has posted on its website a point-by-point refutation of their account. (4)

CREW - whose initials stand for Citizens for Responsibility and Ethics in Washington - presents itself as a non-partisan, public interest group, which litigates and brings ethics charges against corrupt politicians. Its website (citizensforethics.org) states that CREW, "targets government officials who sacrifice the common good to special interests. We will help Americans use litigation to shine a light on those who betray the public trust." Despite this idealistic language, the degree to which CREW's

litigators target Republicans and spare Democrats lends credence to the view expressed by many Washington observers that CREW is little more than an attack machine for George Soros' Shadow Party.

Shadow Party Agenda

The Shadow Party is a tightly-coordinated network of private groups through which Soros disburses campaign cash and exerts influence over the Democrats. In 2004, the Shadow Party raised more than $300 million for Democrat candidates. This gave Soros unprecedented power to bend the Democratic Party to his will. After the election, Soros operative and MoveOn http://www.discoverthenetwork.com/groupProfile.asp?grpid=6201 PAC director Eli Pariser http://www.discoverthenetwork.com/individualProfile.asp?indid=2138 declared, "Now it's our party: we bought it, we own it." (5)

Shadow Party operative Robert Borosage http://www.discoverthenetwork.com/individualProfile.asp?indid=1170 expressed a similar view at the time. A hard-left militant during the '60s, Borosage now serves as co-director of the Campaign for America's Future, a leftwing activist group which has received more than $300,000 from Soros' Open Society Institute. In a November 29, 2004 article in the Marxist journal The Nation, Borosage and Nation editor Katrina Vanden Heuvel http://www.discoverthenetwork.com/individualProfile.asp?indid=1649 wrote:

"[P]rogressives drive this party now - we provide the energy, the organizers, the ground forces, the ideas, and much of the money. We should organize the opposition [against Republicans]. Progressives should mount a powerful assault on Republican boss Tom DeLay." (6)

It is probably no coincidence that CREW executive director Melanie Sloan was thinking along the same lines. "Since I started [with CREW], the main thing I wanted to do was to go after Tom DeLay," Sloan told the Wall Street Journal in May 2005. "DeLay is my top target." The Journal reports:

"A former assistant U.S. attorney for the District of Columbia, Ms. Sloan engineered an ethics complaint against Mr. DeLay in the House,
asked the Internal Revenue Service to audit a pair of Mr. DeLay's fund-raising committees and sued the Federal Election Commission to obtain more information about possible financial ties between Mr. DeLay
and a Kansas utility. She also urged the Justice Department to investigate Mr. DeLay for his role in promising fund-raising help to a
family member of Nick Smith, at the time a Republican House representative from Michigan, in exchange for Mr. Smith's vote on Medicare legislation." (7)

CREW was joined in its campaign against DeLay by a swarm of Soros-funded groups, all posing as "non-partisan" watchdogs - among them Common Cause, Democracy 21, Public Citizen,

http://www.discoverthenetwork.com/groupProfile.asp?grpid=6430
Public Campaign and the Campaign Legal Center. (8) The above-named groups have all received large contributions from Soros' Open Society Institute. Common Cause has received $650,000; Democracy 21, $300,000; Public Citizen, $275,000; and Public Campaign, $1.3 million.(9) The Campaign Legal Center acknowledges on its Web site that it too has received "generous financial support" from the Open Society Institute.

Most of CREW's targets have been Republicans. On those few occasions when it picks fights with the left, it tends to target people like Green Party candidate Ralph Nader, whom Democrat leaders regard as competitors or spoilers. (10)

On March 14, 2006, The Hill newspaper reported that CREW had targeted 14 Republican legislators for lawsuits or ethics complaints, but only one Democrat (Sen. Blanche Lincoln of Arkansas). (11)

Democrat Operatives

CREW was founded by Democrat activists Norm Eisen and Louis Mayberg. Eisen is an attorney. Mayberg is president and co-founder of the Bethesda, MD mutual fund management firm ProFund Advisors LLC.

CREW's 990 IRS filing for 2001 lists its three founding directors as Louis Mayberg, Mark Penn and Daniel Berger. Mayberg and Berger are prominent Democrat donors. Mark Penn is a top Democrat strategist and pollster.

Penn played a decisive role in Bill Clinton's 1996 campaign, and served as head of message and strategy for Hillary Clinton's 2000 Senate campaign. Penn is a fellow of Simon Rosenberg's New Politics Institute (NPI), an important Shadow Party think tank. He is president and co-founder of the polling firm Penn & Schoen Associates.

CREW deputy director Naomi Seligman Steiner formerly served as communications director for Media Matters for America, http://www.discoverthenetwork.com/groupProfile.asp?grpid=7150 yet another group with strong ties to Soros' Shadow Party.

Melanie Sloan became executive director of CREW in 2003. She is a long-time Democrat operative, having served as a former aide to Rep. John Conyers and Senator Joe Biden.

Before joining CREW, Sloan served as nominations counsel for Joe Biden's Senate Judiciary Committee (1993); counsel for the Crime Subcommittee of the House Judiciary Committee for Charles Schumer (1994); minority counsel for the U.S. House of Representatives Judiciary Committee under John Conyers (1995-1998); and assistant U.S. district attorney for the District of Columbia (1998-2003).

Soros Money

George Soros' Open Society Institute contributed $100,000 to CREW in January 2006. (12) More importantly, CREW has reportedly received substantial funding through the Democracy Alliance, a network of leftwing millionaires

and billionaires organized by Soros. According to the Washington Post:

"...a Democracy Alliance blessing effectively jump-started
Citizens for Responsibility and Ethics in Washington (CREW)....
Alliance officials see CREW as a possible counterweight to
conservative-leaning Judicial Watch, which filed numerous lawsuits
against Clinton administration officials in the 1990s." (13)

Other CREW funders include the Tides Foundation,
http://www.discoverthenetwork.com/groupProfile.asp?grpid=7009
the Barbra Streisand Foundation,
http://www.discoverthenetwork.com/individualProfile.asp?indid=1172
the Arca Foundation,
http://www.discoverthenetwork.com/funderProfile.asp?fndid=5282
the David Geffen Foundation, the Wallace Global Fund, the Mayberg Family
Charitable Foundation, the Woodbury Fund, Inc., and the Sheller Family
Foundation - all institutions distinguished by their support for far-left
causes. (14)

"The Mark Foley scandal is over, as the disgraced Congressman enters rehab
and leaves politics forever," states an October 4 e-mail to Nation
subscribers. "But. the Republican Congressional Leadership scandal is most
definitely not over."

The Congress is well rid of Foley. No one is sorry to see him go. But, for
the Shadow Party, the Foley scandal is merely a means to an end. Their goal
is regime change. They will not rest until government power rests in Soros'
hands. And they will use any pretext to achieve that ambition.

Until now, CREW has met little resistance. The confidence with which it
challenges the FBI bespeaks its long track record of success. It remains to
be seen whether the FBI will crumble as easily before CREW's onslaught as
have so many Republican leaders.

to get the hole fix so i am asking for donations to help with the cost since i dont have
insurance
so if you have a paypal account please look into your heart and donate a dollar or two my
paypal
emial is mcollins7373@msn.com i need around 20,000 dollars usd to have the surgery done.
This is my
last resort for money i have tried goverment agencies family and friends and to my
dissapointment
nothing happened SO PLEASE I NEED HELP thank you so much mike collins
---

If you were born with a hole in your heart you wouldnt be posting this
message, you'd be dead. Now if you are talking about an internal hole Im
just curious if you could give us all the medical name for this condition.
I know what the medical name is because Im in the field, just curious if
you know what it is. Anybody who has this condition knows exactly what
its called. Also wondering if you have checked out the nearest medical
college. Most medical universities will do this for little or no charge,
since you "will" be a guinea pig so to speak, but its all suppervised by
long term cardiac sprcialists, and as a whole do an excellent job. By the
way, dont know where you got the 20,000$ figure but a relatively simple
CABG or coronary arterial bypass graft will run 3-4x's that amount, and the
surgery you are talking about is much more complex than that.
Awaiting your reply.

The current story isn't Foley, who is coming to seem almost like a bit
player in the whole business, someone who had a cameo walk-on role in
the first scene. The focus currently is almost entirely on the
Republican leadership -- the classic "what did they know, and when
did they know it?"

I recall no suggestion that the Democratic leadership acted similarly
in the Reynolds case, although I will happily read any credible sources
which might contradict this.

From: dxAce <dxAce@milestones.com>
Message-ID: <452FFC1A.A4251950@milestones.com>
Source record: 94405

CHU, which has been putting in an excellent signal on 14670, and also on 7335, is making this announcement during the first half of odd-numbered minutes:

``From April 1, 2007, CHU needs to stop operating, change frequency, or relicence. Contact radio.chu @ nrc.gc.ca or mail CHU Canada, K1A 0R6.``

As heard at 2021 UT October 13. And of course the equivalent in French on even-numbered minutes. Someone reported recently that 3330 was missing; it seems all three frequencies are somewhat irregular, but it would be a shame to lose CHU permanently.

Here`s a CHU page but I don`t see anything about this threat, nor on the Important Notices link.

So who is giving out medical information?? Knowing the name
of a disease or medical disorder is "not" giving out medical info.
Im just curious if "he" knows the name of his proclaimed condition.
Knowing that someone has diabetes, or lung cancer or any no. of
diseases is not "giving" out medical info. Get real. He brought it
up, not me. He has already stated "what" his condition is, I want
to know if he knows the name of it. Anybody that has it will definitely
know what it is called. Leave the legal subtleties to the lawyers.

Are the call letters KCBS the only example of their kind? KCBS is an Infinity (CBS/Viacom) all newser on 740 kHz in San Francisco. KCB S-FM (formerly KNX-FM) and KCBS-TV (formerly KNXT) are in Los Angeles.

By the way, KCBS in San Francisco is one of several stations (of which the best known is now co-owned KDKA) which claims to be the first broadcasting station in the U.S. Their claim has to do with Doc Herrold's arc broadcasting experiments in San Jose in the years before World War I.

No.

For example, KSAS-FM on 103.3 in the Boise, Idaho area while KSAS-TV is in Wichita, Kansas. Or KTRS(AM) in St. Louis while KTRS-FM is in Casper, Wyoming. I'm sure there are others.

I do think KCBS was the first, when the FCC decided to allow a given company to reuse "base calls" on co-owned stations in different services in different areas.

Later, the rules were amended to allow reuse by *any* station (even those not commonly-owned) provided they had the consent of whoever held the calls first.

Today, I'm not sure they even need consent - it may just be a matter of "try it if you think you won't get sued"...

KDKA claims (and is able to back up that claim) that they were the first
COMMERCIAL broadcast stations.

As for the question, this happens all the time, where a call is found in
diverse geographical areas.

Since Foley was known to be gay for years, it is not his sexual
proclivities that makes this news or scandal.

The Republicans are self-righteous hypocrites about moral values. The
Democrats more often than not are social libertarians regarding
victimless crimes.

It is the hypocrisy that makes this a scandal; it is the coverup that
makes it a lasting scandal; it is the impending loss of control of
Congress because the religious reich now knows what hypocrites they
have been supporting that makes it big news.

>Over the past 12 days, more than 150 stories on Foley aired on morning and
>evening news shows on ABC, CBS, and NBC, the Media Research Center, parent
>company of Cybercast News Service, found. Compare that to 19 stories over
>one year in the scandal involving Mel Reynolds - a Democratic congressman
>from Illinois convicted in 1995 of having sex with a 16-year-old campaign
>worker.

Did Mel Reynolds belong to a party that claimed to uphold the values
of the religious reich? Was there a cover-up by the party leadership?
Did it threaten loss of control of the Congress?

No to all of the above.

In addition, the Reynolds scandal involved an indictment, and the
media tends to downplay things between an indictment and trial, in
part because the key news sources also hold off, not wishing to get a
contempt of court citation, or to otherwise prejudice the trial making
a conviction impossible. Furthermore, Reynolds was reelected, whereas
Foley resigned.

>Reynolds also conspired to have sex with the teen's 15-year-old friend,
>solicited child porn, and was convicted on 12 counts of sexual assault and
>obstruction of justice.

But of course the conviction took place a year after the scandal
broke.

And the point is, that this scandal is NOT solely about what Foley
did, but what the Republican leadership didn't do when they were told

about it.

Thanks for that; they were interesting to see.

I'm frankly amazed that people in the USSR were chatting over the
radio with Americans in 1950. Those guys must have worked for the
secret police, received special permission, or had balls the size of
grapefruits. We used to hand out 25 year terms in Kolyma for crimes
like that!

Stupid right wing boobs support the notion that homosexuality = pedophilia.

They ignore the facts as put fort by the American Psyciatric Association
that one has little to do with the other, and rely on their "beliefs".

The same beliefs which claim that Terry Schiavo was "of mind" and not a
vegetable, despite the autopsy which proved otherwise.

It's a sick idea they have.

Yes. The revolutionary new logic, developed by bobandcarole, takes the
form "I believe it, therefore it is true."

It replaces the logical forms of argument that have been in existence
since the 4th century BC.

> KDKA claims (and is able to back up that claim) that they were the
> first COMMERCIAL broadcast stations.

Except that KDKA wasn't selling any commercials back in 1920. (there is some evidence WJZ - now WABC - was the first station to sell airtime to an outside advertiser, in 1926. Before then, the economic justification for a broadcasting station was to advertise the licensee's own products/services.)

Arguably KDKA was the first station to take out a license for the specific purpose of broadcasting. (Doc Jerrold's KQW (now KCBS) made its first broadcast at a time when no licenses were required at all. Wisconsin's 9XM (now WHA) was licensed as an experimental station. Both stations did eventaully take out broadcasting licenses, but not until after KDKA and other stations had already done so.)

There is evidence that KDKA's well-publicized first broadcast (of returns of the 1920 election) was not made under the KDKA license, since that license was not issued in time. KDKA already had an experimental license and likely used that license to make the election broadcast.

Really, who was first depends on definitions.

See http://earlyradiohistory.us/sec024.htm for more information.

But to promote the owner's business is still commercial.

That was the early model. All kinds of radio stations owned by some other business went on the air, and it was seen as advertising for the business.

It's only later that a standalone model came about, where radio stations were owned by third parties and simply sold advertising space in order to support the station (and thus the business).

Source record: 94447

Based on positive reviews here and elsewhere, and deciding I could live with its ergonomic idiosyncracies, I just bought a new Kaito KA1103. So far, I like it well enough, and the ergonomics are even a little charming. But I have a question about using the radio itself to charge the included NiMH batteries. It's not clear to me how long to set the charging timer for, nor whether there is a risk of damage if the batteries are charged for too long. The spartan "manual" gives a formula of battery mAh / 100 for the # hours to charge, which in this particular case of 4 x 1300 mAh batteries is 52 hours? But the maximum charge time you can set is 23 hours. Does anyone have prior experience charging the KA1103? After playing with the radio for an hour, the battery indicator hit the 25% full mark, and I decided to charge them for 10 hours, based on nothing in particular. Is this too long? Too short? Anyone know?

Seems likely that those 4 batteries are in series.
When they are in series the voltages add but the
current rating is that of the weakest battery.
(If they are put in parallel they better all have the
same voltage and the current capacities add.)
Your 4 - 1300 mAh batteries probably look effectively
like one 6 V, 1300 mAh battery to the radio.
So 13 hours is probably right.

As I understand it, the actual callsigns are KCBS-AM, KCBS-TV, KCBS-FM.
Three distinct calls. That's how calls show up in the FCC liscence database.
(Perhaps, without the '-').

> Are the call letters KCBS the only example of their kind?
KCBS is an Infinity (CBS/Viacom) all newser on 740 kHz
KCB S-FM (formerly KNX-FM) and KCBS-TV (formerly KNXT) are in Los Angeles.

These are not the same call signs. The TV and FM endings are integral parts
of the callsign
According to the way the FCC looks at callsigns these are three separate
call signs.

KCBS is a four letter call sign
KCBSFM is a six letter callsign which happens to end in FM
KCBSTV is a six letter callsign which happens to end in TV.

WLW and WLWT, or WWV and WWVA, or WBT and WBTV are not the same callsigns,
even though each set contains the same first three letters and each station
is owned by a different owner.

Beware of the tuning wheel on the 1103 going south. Mine did and so
did many others- maybe Kaito fixed that problem.

4378. What rechargeables?

I recently got a Redsun RP2100, the users view of which I previously posted
on this group.
It has the facility to use rechargeable batteries, something of which I know
nothing about.
It will charge these batteries for twelve hours.
I want to use "D" cells but don't know which rechargeables to buy.
My local store can order me NiCad's or NiMH - I don't know anything about
that.
What's the difference?

Also there are different numbers like 1500 or 2500 which seems to mean how
long they hold the charge.
I would be grateful for advice from you highly knowledgeable fella's as to
what I should buy.
As they seem to be very expensive, perhaps I should just stick to ordinary
batteries and forget about the rechargeables?

John,

My guess is that you will get very good battery life on that radio with
alkaline D cells.
Unless you have many devices that run on D cells, I think it would be
hard to justify the expense of the cells plus a dedicated charger.

On the other hand, with so many devices running on AAs, I think most
people can easily justify a few sets of quality NiMH AA cells and
charger. Just about all of my high use AA devices are on rechargeables
now. After a while, you figure out which devices need/prefer the
higher voltage of alkalines. As you probably know, rechargeables are
rated at 1.25 v usually vs. the 1.5 of alkaline. Devices that are
going to sit for long periods of time between uses are not good
candidates for rechargeables.

For what its worth, I have invested in AA and AAA rechargeables and
stuck with alkaline in the bigger size cells (C and D).

The numbers stand for milliamp hours. So the higher, the better. AA
NiMH rechargeables are in the 2600-2800 range now which puts them very
close to being on par with alkaline. From what I can tell, D cell
NiMH's aren't nearly as close yet.

Stick with NiMH. NiCad is older technology and has been pretty much
replaced by NiMH.

Here is a good U.S. distributor of cells. I know you are in S. Africa,
but you can learn a good bit by reading the website, etc.

New recargeable NiCad batteries should always be conditioned properly before you use them.otherwise they will develope a memory and will not recharge up all the way again.Here is how I do it and it always works for me.Charge the batteries up and put them in a flashlight.(torch) Turn on the flashlight and let the batteries drain all the way down.Do that at least three times,you will notice the flashlight stays on longer each time.(try it,it really works) Whatever you use the batteries in,always let them drain all the way down before you recharge them back up.Once a month,put the batteries in a flashlight and let them drain all the way down and then recharge them.My favorite brand name of batteries are Ray O Vac. www.rayovac.com Eveready battteries are good too.
cuhulin,not a battery expert,but I do know what works for me

I like ergonomics good enough. If you listen to radio while laying in bed with the radio in your hands - ergonomics not to to bad. press button left hand and then twist knob with right hand. I wish volume the control only worked when you press volume button. Get rid of that stupid delay.

Now I damn near cut off right thumb with my table saw. Did a rip cut right up the thumb. A cross cut would have sheared the thing all the way off. So point is ergonomics of radio not as important as they used to be with two good thumbs. Heheh.

I used to do about 8 hours when they are totally dead when the radio turns off by itself. I got a couple of sets so I don't really care if they're charged right up to the tippy top. When I'm on the road I charge em up with my cigarette lighter port thru a 68ohm 1watt resistor for about the same time. Now I got one of those Rad Shack chargers to charge. That was an expensive deal. I think I paid near 25bucks for the charger and 4 metal hydride batteries.

I am going to make a guess here and say I get about 14hours out of a charge. I usually play with it for an hour and then put Laura Ingram on to fall asleep by for another hour. So maybe 2 hours a night for a week or so. I think maybe you aren't starting with a full charge. Anyway, 10 hours should do it for ya if batteries good.

Please describe what batteries look like and markings. The last DE1103 I bought had batteries said ETON on em.

There is a DE1103 group at Yahoo groups.

"""

About ten years ago I got a batch of heavy-duty Radio Shack Ni-Cads rated at 5,000 mah. They were quite satisfactory but were a bit fiddly to recharge correctly. I still have some of them. The larger capacity was well worth their extra price. Many of the new NiMH batteries on the matket today are just repackaged AA cells at 1500 or 2500 mah. A full D cell would be rated at 11,000 mah and would last a very long time in a radio. You might have to get a special charger, however, as the Redsun seems to have a charger circuit for the smaller-capacity cells: maybe you could just leave the higher-capacity cells in longer. The ni-cads needed close attention: they developed "hairs" that had to be blasted off with a 12-volt battery, they would develop a memory if not discharged occasionally, and special chargers with "saw-tooth " wave shapes were developed to get better efficiency. There is quite a bit of literature on the care and feeding of Ni-Cads. They also self-discharge in storage, so if you don't use the radio a lot, the cells go flat anyway. If you use the radio a lot, and if you can handle the extra cost, the 11,000 NiMH cells would be worth a look. Since I have far too many radios, I stock them with cheap garden-variety D cells that hold their charge in storage, and only use the NiMH cells in two often-used portables.

4392. need low price for SW7600GR

First of all it isn't 4 x 1300mah, the batteries are charged in
series. Figure the charginig process isn't 100% efficient, so you
need to charger to about 120% of capacity, however you rarely run the
batteries flat. Long term overchargiing converts water to oxygen and
hydrogen which are vented from the battery, resulting in battery
failure. You need to estimate how far down you are going to run the
battery, Without knowing how it evaluates battery charge, it is hard
to know what 25% really represents. NiCd and NiMh have pretty flat
discharge characteristics, so at the point at which you notice a
significant voltage drop, the battery is pretty much flat already.
I.E. by the time you get from 1.25V per cell to 1.1 volts per cell,
the battery is probably down to about 5% of capacity. Immediately
after recharge you can see voltages as high as 1.7 volts per cell, but
it doesn't last long.

In any case, figure out how far you run down the batteries, and
re-charge to about 120% of that. However if you use the latest high
capacity NiMh cells, 2600-3000mah, at 100ma, you may NEVER fully
charge the batteries. It is very hard to reach full charge if you
charge at less than C/25....

'Real' D size NiCd in the D size run about 5000mah, NiMh's in true D
size run from about 7000mah to 11000mah. 1500 or 2500 are in fact size
AA NiMh cells in a D sized battery. I would assume the charge circuit
is designed to charge a D size at several hundred Ma, although exactly
how much is apparently dependent on the voltage from the AC adapter.
IIIRC, according Lipyn's manual, voltages below 8V probably won't
charge the batteries.

I use 7000mah D size NiMH cells in mine. Give nice long run times.
However you will pay a lot more for 'real' D sized batteries than the
AA's in a D size package.

Phone twice and then hang up.Back in the 1950's my family had a phone code.Let the phone ring twice and hang up and let it ring again,that way we knew it was from a family member.When someone went to a city far enough away that it was long distance and we wanted to know if they got there ok.Phone and ask for someone by a different name.Is Leroy there? No he isn't here.

Be careful about charging batteries within the radio. It has a dumb charger only regulated by time. After a few charge cycles your batteries will probably not perform to their potential. That can be a problem because this model radio goes through batteries in a hurry. After a while there will probably be one battery that will not fully charge and maybe another that will over charge. It's recommended to get a good battery charger.

I use this battery charger:

http://www.thomas-distributing.com/mhc401fs.htm

It's slow charge option is a good match for the Degen 1300mAh batteries that came with my radio. The batteries won't fry, and each one gets monitored separately so that all four get a full charge.

I charged my batteries with a dumb charger a few times before getting the Powerex charger. On the first use with the Powerex charger, I found that one battery took much longer to charge than the rest. After a few cycles the charge time evened out amongst the four batteries and I now get longer playtime.

You can also send SMS messages from ICQ for free. If your plan charges you for incoming SMS messages, you will have to pay your SP's fee.

If you have a Linux (or similar) system, you can find a program that will send the messages for you without a phone via a command line. That way you can do all sorts of interesting things, include an email to SMS gateway, send you messages at specific times, follow an RSS feed and SMS you messages, etc.

Geoff.

Hello.

In my experience, the least costly reliable place to buy this radio in general is Amazon.com. Right now their price is $149.99 but they sometimes put it on sale. Last year in December I bought two of them at $129.15 each and that included shipping.

That's not to say that there may not be some other places that offer it at $125.00 or less, but I recommend you check Amazon several times a week as well as checking some shopping bots on the web. Make sure you watch out for outrageous shipping charges.

As we approach the holidays, the chances of Amazon running this item on sale increase. If you can be patient, you may be amply rewarded.

Best of luck,

Joe

Dear John,

Try ordinary alkaline batteries and make note of the date on which you install them. See for yourself how long they last. If you feel that the time you get from those batteries vis à vis their price is satisfactory, well, you have your answer as to which to use.

In my Grundig Satellit 800 (a "battery-eater") I use C. Crane NiMH "D" size batteries - they are rated 9000 mAH. They cost $9.95 each here in the US which is rather high now. (When I bought them several years ago, they were "the only game in town.") There are others which have ratings up to 11000 mAH and which cost less. C. Crane's Quick Charger, which can charge all sizes of NiCads and NiMHs, sells for $39.95 in the US. There are now other chargers which are at least as good and possibly better for the same or less money. You'd have to check what is available locally for you.

I use rechargeable batteries in the Satellit 800 because the cost of regular alkalines would be exorbitant. I own two sets of six "D" cells for that radio as well as two chargers so I can recharge six batteries at one time.

While my Sony ICF-SW7600GRs are easy on batteries, nonetheless I use "AA" NiMH rechargeables in them also.

In the long run, rechargeables are generally less expensive than primary alkaline cells. (A notable exception to that rule is the GE Superadio - it goes a VERY long time on regular alkalines. Also my old - 1969 - Hitachi KH-1108S gets three-and-a-half to four years from a set of four alkaline "D" cells but I do not use that set for long periods of time - generally just to quickly listen to the local MW news station to hear the headlines and the business report.)

Do not even consider NiCads. They are a "pain." I used them for years and, when NiMHs came out and I tried them, I went over completely to using NiMHs. There are just too many advantages of NiMHs over NiCads - the most notable being virtually no "memory" effect. You can charge NiMHs any time you like and, while they should be "conditioned" (discharging completely and then recharging) once in a great while, in general that annoying step can be skipped.

I hope the above has been of some use to you and, as always, I wish you the very best of luck.

Joe

P.S. I'm waiting to see if Redsun introduces an RP-3100 model - Jay
Allen states that they will be doing so soon and this radio will be
exactly the same as the RP-2100 but will incorporate a synchronous
detection circuit. The mouth waters ...

Generally, D size alkaline batteries last a long time, so getting the rechargeable version isn't cost effective. AA size alkaline batteries on the other hand, run down much faster, so getting the NiMH rechargeable version is a good idea for some applications. Keep in mind, that rechargeable batteries run down in just a few weeks or sooner after a full charge, even if they are not being used. AA NiMH rechargeables are good for smaller electronics that use a lot of juice in a short period of time.

If you do get a NiMH battery charger, be sure to get a "smart" charger that will monitor each battery separately during the charge.

I got this model charger to use with my Degen radios:

http://www.thomas-distributing.com/mhc401fs.htm

Bzzt! Sorry, but thanks for playing our game.

The correct answer is that there are no 6 letter calls in the US. When the stations with the KCBS call legally identify themselves, it is done as "KCBS [COL]" Legal station ID's do not have the AM/FM/TV suffix, nor even the frequency/channel of operation.

Stations KBPS (AM & FM) are co-located, but not co-owned (one is owned by the KBPS Foundation, the other by Benson Polytechnic High School). Each ID's only as "KBPS, Portland"

You'll receive a copy of our home game.

This is NOT correct. FCC Rules and Regulations specifically authorize 6
call signs for broadcasting

Please refer to FCC Rules and Regulations section 2.302 (callsigns)(page
632).

The Regulations state in part:

"Broadcasting (standard)..... 4 letters \3\ (plus location of station).
KAAA through KZZZ.

WAAA
through WZZZ.

Broadcasting (FM)..... 4 letters (plus location of station)..
KAAA through KZZZ.

WAAA
through WZZZ.

Broadcasting with suffix ``FM''. 6 letters \3\ (plus location of station).
KAAA-FM through KZZZ--FM.

WAAA-FM through WZZZ-FM.

Broadcasting (television)..... 4 letters (plus location of station)..
KAAA through KZZZ.

WAAA
through WZZZ.

Broadcasting with suffix ``TV''. 6 letters \3\ (plus location of station)
KAAA-TV through KZZZ-TV.

WAAA-TV through WZZ-TV.

>When the stations with the KCBS call legally identify themselves, it is
>done as "KCBS [COL]" Legal station ID's do not have the AM/FM/TV suffix,

again this is incorect, please refer to FCC Regulation 2.302

There is only one station "KBPS". It is an AM station on 1450KHz.
It is owned by School District #1 of Multnomah County, Oregon.
The FM station is on 89.9MHZ its' call sign is "KBPS-FM".
If the station owned by the Foundation is identifying itself only as "KBPS",
they are not correctly identifying their station.

You may check the accuracy of this data by going to the FCC's General Menu
Reports at: HTTP://svartifass2.fcc.gov/reports/index.cfm
Click on callsigns and enter KBPS or KBPS-FM
SCHOOL DISTRICT #1, MULTNOMAH COUNTY, OR

SCHOOL DISTRICT #1, MULTNOMAH COUNTY, OR

I used to have call waiting.I could set my webtv so that it would automatically disconnect from the phone line so I could answer my phone.Then,when I got through using my phone,I would press a key on my keyboard and dial right on back on to the internet and I wouldn't lose my place of where I was on the internet before my webtv box disconected.

There are three certain times three times each day that I get off of the internet for a certain while in case family members and friends want to phone me.If there is an emergency situation and I am on the internet,they will phone two elderly people down the street from me and they will get me on our FRS two way radios.radios.It works for me.

Alpha Delta DX-SWL Sloper antenna including
75 feet of coax with connectors for sale.

These items were purchased BRAND NEW in anticipation
of an install outside my home that never transpired.

These items are BRAND NEW still in the carton as shipped
from Universal.

$100.00 shipped to lower 48 via UPS ground, insured.
(Includes brand new antenna AND 75 feet brand new coax).
NO TRADES

I accept PAYPAL (preferred), US Postal money order, or personal check.
(Personal check will delay shipping until it clears).

eBay feedback under OFFDAN

E-mail only, please if interested or if you have questions.

dconti@nj.rr.com

> short? Anyone know?

Rather than guessing at the charging time and having to deal with a
portable that is tethered to a charger I just use 2 sets of NIMH's and
a wallwart charger. I found it to be far easier than using the goofy
charging setup thet Degen uses in that radio.

It does have more than it's share of idiosyncracies, but the basic
radio performs pretty well for $50.00.

> the 2500mah. Obviously the 2500 hold a charge longer.

Not 1500 mA/h, but 1500 mA*h or 1500 mC (millicoulomb).

Suppose a capacity of 2500 mAh,
then the product of current and time equals 2500 mAh.
So, if your device draws a current of 250 mA, it will work for 10 h
(250*10 mA*h = 2500 mAh).

With a current of 2,5 A it should function for 1,0 h;
in practice the run-time is shorter...

4427. Loop antenna questions

Newsgroup: rec.radio.shortwave
Date: 2006-10-15 03:10:13 UTC
From: N9NEO <yzordderrex@verizon.net>
Message-ID: <1160881813.172313.183860@k70g2000cwa.googlegroups.com>
Source record: 94551

I posted a few questions about loop antannas but they didn't get answered over on Yahoo loop antenna group so I will try here. I've condensed post some. Loops I have been playing with so far are strictly for 500kHz -1600kHz. I know this is SW group so I think maybe the info would be good for others that may want to experiment with loops for SW too.

1) I understand that the common method to couple a portable radio to the loop is to just stick the radio into the center of the loop. Doesn't this method then tend to have directivity in two orthagonal directions? In other words the loop will have a node in the North-South direction while the ferrite rod will tend to be directive in the East-West direction, because of the orientation of the ferrite rod within to the Loop. So now the nice null that you have along the axis of the loop is destroyed because the ferrite is aligned there. Is this correct? Maybe it might be good to couple signal in another fashion.

2) Where should the tuning capacitor be located physically relative to the loop? I would suppose the best place to put the capacitor would be directly on the coil. The capacitor is a heavy unit from a Heatkit SB220 Linear amplifier, so it just doesn't want to hang anywhere. I would like to mount it to the base of the loop and run some sort of low inductance wire to the loop. Maybe a light gauge sheilded cable or lamp cord - which would minimize the stray inductance between the tuning capacitor and loop would be good. Total distance would probably be less than a foot. I have found that alligator leads want to be twisted tightly together in order for this thing to work. So is this a good plan?

3) I have three wiring options as far as the variable capacitor goes. One gang, two gang in parallel, or two gang in series. Right now I use two in parallel near the bottom end of the band, and one gang nearer the top. Should I add more turns to the loop and use a smaller amount of capacitance. Literature I've read says use more turns and this will also give more antenna gain. I know that more capacitance will give me more Q, but not sure at this point if I need any more Q. I know that V = N * dflux/dtime so maybe more turns means more volts. I guess it's probably time to go review some detailed literature on loop antenna design.

5) I am considering going from 20 Gauge magnet over to litz wire. I would like to hear comments regarding this approach, and also who is a good litz wire vendor if approach is worthwhile. I think maybe the crystal radio peeps may have some input on this one.

6) I am also considering the varactor diode tuning approach. Comments?

Thank-you for any guidance you can give with this project.

Regards,
NEO

Somebody Somewhere wrote:
> They'll also probably discuss that explosion in North Korea.

It's been dull since Klinton left office.

No news worth talking about and Riley has put the kaibosh on the jammers.

And the best players have gone SK or QSY. Kind Jewish Indian, Arky Bob, Sir Sidney, Loose Orifice, Chicken Fornicator, Girl's Underwear, Tarzan, Doofus, many more.

And then the renegades who took over on 3950. Unnnnn-heard of. Unnnnn-called for. They need to get a life and move off our frequency. If I had Captain America's amp, I'd run them off in a New York second and return 3950 to the jammers where it rightfully belongs.

So when do these new ham radio regulations take effect ? I can't wait to hear Mr. Davies check in to The Great Liberty Net. I hope he'll say hello to all of us SWL-ers.

> the stations with the KCBS call legally identify themselves, it is done as
> "KCBS [COL]" Legal station ID's do not have the AM/FM/TV suffix, nor even
> the frequency/channel of operation.

That is 100% incorrect. If there are an AM, and FM and a TV with the same first 4 letters of the calls, the license of the FM says "WXXX-FM" and the TV is "WXXX-TV." The legal ID is not legal if "FM" or "TV" are not read (or visualed in TV) are not part of the ID. In fact, many FMs that used to share calls with an AM that later changed to other calls are still "WXXX-FM" even if there is no AM with the same calls.

>
> Stations KBPS (AM & FM) are co-located, but not co-owned (one is owned by
> the KBPS Foundation, the other by Benson Polytechnic High School). Each
> ID's only as "KBPS, Portland"

Then they are doing an illegal ID, as the license of the FM, baring a unique FCC error, is KBPS-FM. The FCC database shows "KBPS-FM" to be the correct calls, too. I looked for a station I know never had an AM, and it shows as "KLVE" alone, without the "-FM" suffix.

If it is on the license, it must be said.

And per 75.1150, an ID may include the channel number between the calls and the city of license, so it is, if done this way, part of the legal ID:

I got a set of Energizer "D" NiMH batteries the first day I got my 2100.
They're only the 2500 mah type but they seem to last for a long time.
In retrospect I could have been better off with AAs as there is only a
little more capacity and they cost about twice as much. Also I have a
AA-AAA charger
but only a NiCad charger for the other sizes. The radio charges the batteries
OK I guess but never indicates more than 2 out of three bars on the
battery level meter. On the bright side, the radio rocks! My Sangean,
Halicrafters and Zenith are no longer used.

4441. Ear Phones And Ear Buds ?

Newsgroup: rec.radio.shortwave

Hello:

Have tried several brands of earphones, but find them all pretty
uncomfortable.

Was wondering if anyone has any experience with these "ear-bud" kinss of
phones ?
Comfortable for long term use ? Fidelity ?

Also, is there possibly a type available that you can hook over one ear, but
does Not go truly into the ear canal ((like a hearing aid does) ?

Any of these available as wireless ?

Would like to keep cost down to about $75 max.

Any thoughts and brand suggestions would be most appreciated.

Thanks,
Bob

Get NiMhs and a good charger. See http://www.thomasdistributing.com/
for both, excellent fast shipping.

The higher the Mah number the long they will last. Higher is better.
NiMhs can be recharged HUNDREDS of times, I've been using them ffor
years, I use them in everything except smoke/C02 alarms and clocks. I
use them in my Panasonic RF-B65 SW receiver.

4444. Voice of Korea

Here in SE UK I've been trying to get Voice of Korea (Radio Pyongyang as was...) and according to their info at http://www.voiceofkorea.org/technical/inquiryform.htm I've been trying 13.760 and 15.245 between 13:00 and 13:57UTC. Nothing... Zilch... (I know it's daytime, will try again later on tonight)

Has anyone had any success with N.Korea? I've been explaining the HF output of such states to my partner and this is the last proper Stalinist police state. (Remember the military marching music whilst Gorbachev was "on holiday" in his country dacha?) Anyway, I'd really appreciate any freq's and times/locations etc that people have had any success with this one... Shortwave is just not the same without some decent propaganda. There used to be loads of it.

Les

Smart move, especially in the smoke and CO alarms. A regular battery has
a different discharge curve and will give you lots of warning before
it's inoperative.

A rechargeable nicad or NiMh may go dead while you are out of the house
and don't the hear the few warning beeps.

I have great recall. You could have it too, if only you'd lay off the Labatt's or the Molson.

You might also have more fun if you'd only chuck that fixed frequency radio the CBC gave you and step up to something a bit better.

----- Original Message -----
From: "N9NEO" <yzordderrex@verizon.net>

>I posted a few questions about loop antannas but they didn't get
> answered over on Yahoo loop antenna group so I will try here.

That particular Yahoo group is generally very responsive and knowledgeable. I find that if you ask too many questions at one time, the reponse is lower than if you keep the questions down to 2 or 3. Break down your questions and you will probably get a better response. As I said earlier, they are good.

> So now the nice null that you have along the axis
> of the loop is destroyed because the ferrite is aligned there. Is this
> correct?

If you want to use both antennas, place your receiver into the loop in such a way that the two antennas are mutually aiding each other (they should be locked together in this position) and keep them this way. In other words, if you rotate one antenna in one direction, the other one should also rotate in the same direction.

> 2) Where should the tuning capacitor be located physically relative to
> the loop? I would suppose the best place to put the capacitor would be
> directly on the coil. Total distance would probably be less
> than a foot. So is this a good plan?

Yes, keep it close to the coil but don't go crazy trying to keep it extra short. Try your plan plus or minus a foot and you will not hear a difference.

> 3) I have three wiring options as far as the variable capacitor goes.
> One gang, two gang in parallel, or two gang in series. Right now I use
> two in parallel near the bottom end of the band, and one gang nearer
> the top.

Sounds complex. Do you have to tune both capacitors in order to resonate the antenna? Simplify by keeping the capacitor(s) near the easy access point only. If you can tune your antenna across the range you want (which may be difficult with just one variable capacitor) then you have accomplished your goal.

> 5) I am considering going from 20 Gauge magnet over to litz wire.

I suppose in theory there should be an improvement, but nothing that you will be able to hear. It's like comparing a million dollars to a million-and-one dollars. Mathematically the million-and-one is better, but what can you do with that extra dollar that you can't do with a million?

> 6) I am also considering the varactor diode tuning approach. Comments?

I also have a loop antenna, for the LF band below 550kHz, that I would like to tune remotely and have considered varactors. The negative comments I read about varactors is that because they are diodes, there will be some rectification effect on incoming signals resulting in unwanted signals. I have not tried them so I don't know how they will work. If you come up with a workable solution, please let us know.

> Thank-you for any guidance you can give with this project.

Fidelity is pretty good. But comfort depends on the size of your ear canal and the size of the earbud. This would have to be a 'cut and try' type of thing.

>
> Also, is there possibly a type available that you can hook over one ear, but
> does Not go truly into the ear canal ((like a hearing aid does) ?

Most earbuds go in the canal. But there are a few, and I think CCrane has a couple that hook over the ear, and rest on top. Comfort for these depends on how well they're designed, of course, but are generally nicer after several hours of listening than the in-ear bud. At least for my ears.

Now, there is a third option that I created for my cell phone. It's an in-ear bud, but slipped into a molded earpiece. Can't fall out. Comfortable for hours of wear. The molded earpiece does change the quality of the sound, but if you're talking about HF radio, you're not exactly into hi-fi territory. You can get ear molds at Radio Shack in the cell phone department. Jabra makes them, they're soft silicone, and you can slip just about any earbud into one.

Then, again, Telex makes earplugs with accessory earmolds that snap together and fit quite well, but are acoustically designed for decent fidelity. TV anchors wear these on-camera. You can put the driver at the end or a coiled acoustic tube and then snap the tube into the earmold, OR you can snap the earmold directly onto the driver and slip it into your ear. I have this arrangement, too, when I'm using my R-10 in the field. Good listening, long term comfort, and I never have to worry about it falling out of my ear.

Both Jabra and Telex make earmolds in different sizes for your fit. The Jabra come in multiple sizes already in the package, both left and right. The Telex, you have to select size, left or right at order.

>
> Any of these available as wireless ?

>

Mostly not, but wireless can be creatively arranged, with a bluetooth arrangement, if you'd like. There are bluetooth transmitters and receivers available. And the bluetooth earpieces are worn over the ear as you would prefer.

> Would like to keep cost down to about $75 max.

Then, a good set of earbuds and the Jabra earmolds would be your best option. The Telex components alone would cost you about twice that. Though bluetooth, from an outlet like TigerDirect will probably make your budget.

I'm sure that if you work harder, you will be able to get a better place in few years. I KNOW suffering, believe me. Last year's grape harvest was four percent lower than was forecast. That caused much pain and suffering in the household. Even the stable attendants were heard crying in bitter anguish...at least that's what the chauffeur said.

I love this group. It's so egalitarian. Even poor (shudder) people get heard. After all, it's the radios that count, not the hovels that the lesser classes have to endure.

Please excuse me. I have to supervise the trades people now. I have the longwire antenna lovingly coated with Technetium on an annual basis and the work crew has arrived at the gate.

Thanks for the comments AL.

I am the first to admit that I am long-winded and tend to write Magnum Opus posts. I am actually a writer stuck in an engineer's body. Yes, those that hang over at the loop antenna group have a lot on the ball. I'll make it a point to try and keep my posts smaller.

I'll do some more experimenting today with the orientation of the ferrite inside the loop. I found the best coupling between the loop and the ferrite was when they were at 90 degrees to each other.

The three wiring options are just a fact when you have two gangs on one shaft. It's not complex. I suspect I just didn't get my point across. I think each gang is about 450pf, so that options are 900pf, 450pf and 225pf depending on how I wire to them. The capacitor came out of a linear, which I probably already said, so it is way bigger than it needs to be. I think when all is said and done I will find a smaller capacitor and use more turns on the loop.

Ok, I'll stick with magnet wire for now and save the litz experiments for later. Ditto with the varactor. I've got way too many irons in the fire now.

Thanks for the positive feedback

A word of advice..as an added bit of insurance, I had all the receivers within three metres of the the pools placed on ground fault circuit interrupters. Losing house guests (or even staff) to stray currents that make them spasmodically twitch and writhe isn't very nice. Amusing and humourous? Yes. Nice? No.

Yodar,

I think that you are blaming Thunderbird for some problem with the
way that the account is set up. I am using version 1.5.0.7. TB has
been my news reader a couple of years and I have never had a problem
using it for reading usenet.

If you really can't get it to work you will find lots of help here:
http://forums.mozillazine.org/viewforum.php?f=39
or
news://news.mozilla.org/mozilla.support.thunderbird

Charlie.

The diodes have a reverse DC bias, so there is no rectification of the
RF signal. Now the Q of the varactor might be an issue.

Certainly someone will correct me if I am mistaken, but I am under the impression that for SW listening, especially DXing, you're better served by headphones/earbuds that deemphasize the higher frequencies. Thus high fidelity models may not be in order here. FWIW, if you must have high fidelity, I have found that JVC Gumy earbuds are exceptionally good for the price, less than ten dollars at Walmart. They are molded out of silicone, hence very comfortable hour after hour, seem to be right and left ear specific for best fit, and offer top notch musical reproduction on my walkman type radios. I wear them several hours every day and they have never fallen out on my walk. In fact they're so comfortable I no longer notice them when they're in.

Acactly what frequencies are you trying to amplify and perhaps more
importantly,
why are you amplifing them?

For LF/MW/HF, unless you are using a loop or a short active antenna,
which
will already have an amp, further amplification will almost alway lead
to
overlaod and other unpleasentness.
At least we need to know:
what type receiver(s) you have.
what type antenna are you planning on using.
what frequencles are of interest.

It is very hard to get a single amp to cover the LF (100KHz) ~ upper
HF(30MHz).
When you try to go higher, small simple general purpose amps simply
suck.
6Meter amps are very different from 10Meter/28MH. FM, 88~108MHz over
here

in the USA are a whole different beast. While it is simple tp design
and build a
wide bandwidth amplifier, they all tend to fold when exposed to the
wide range
of signals delivered by an antenna.

> calls with an AM that later changed to other calls are still "WXXX-FM" even
> if there is no AM with the same calls.

It should be noted that the FCC allows a station to call itself anything
it wants, as long as it uses the right call letters at the top of the
hour. Channel 2 can call itself "KCBS-TV", "KCBS", "CBS 2", "Channel
2", or even "KNXT"* as long as it announces "KCBS-TV, Los Angeles" in
their hourly ID. On a TV station, that ID may be visual or aural -- it
doesn't have to be both -- so they could verbally announce "KCBS, Los
Angeles" as long as it said "KCBS-TV Los Angeles" on the ID slide.
--
Doug Smith W9WI
Pleasant View (Nashville), TN EM66
http://www.w9wi.com

* I would imagine they might get in trouble with the FCC and almost
certainly would get in trouble in the civil courts if they chose to use
the call letters of some other station in the same market. If Channel 2
in LA were to call itself "KNBC" - the call letters of channel 4 - I
don't think they'd get away with it!

> Three distinct calls. That's how calls show up in the FCC liscence database.
> (Perhaps, without the '-').

That's pretty much right.

There is no -AM suffix - AM stations never have a suffix.

FM or TV stations *may* not have -FM or -TV suffixes, if they aren't
necessary to avoid conflicts. For example, LA's channel 4 is KNBC - not
KNBC-TV - because there is no KNBC(AM) or KNBC(FM).

However, a station might have a suffix even if it doesn't need it...
For example, channel 11 in Green Bay, which is WLUK-TV even though there
is no WLUK (AM) or WLUK (FM).

There is no KQED(AM), so channel 9 in San Francisco can be KQED, not
KQED-TV. There is however a KQED radio, on FM, so to avoid conflict
with the TV station (that was there first) it's KQED-FM.

Confused yet?<grin>

It is better to think the NiMh batteries have a rapid discharge rate and a flat 'running' range. They hold their rated voltage longer than a lead acid, but near the end of the capacity, suddenly drop. That is why they are a bad idea for smoke detectors. You might not be around when they give the warning beeps.

nimh discharge:

http://snipurl.com/z3f3

Dry cell types have a longer slope of discharge and it starts WAY earlier in the charge life of the battery. They give you lots of warning as they approach an inoperative state.

Source record: 94719

Yes, I own five ICF-SW7600GRs as well as two ICF-SW7600Gs. The Gs are now "retired" as the GRs are really much better in terms of features. Both models perform identically, however, and both are constructed to an unusually high standard.

I hadn't intended to buy those last two GRs I bought last year but $129.15 was just irresistable. I think the Sony ICF-SW7600GR is the best small portable shortwave radio on the market right now. There are some others that may offer a somewhat better value, but they will not outperform the Sony nor will they be constructed as well.

I wish that Sony were still interested in the shortwave market. Imagine what they might have done with an updated and improved ICF-SW7600GR, not even to mention an updated ICF-2010. I'm sure the '7600GR (and the ICF-SW35 - I own two of them also) will be the last SW radios Sony produces. Get 'em while you can!

Best,

Joe

I am interested in learning more about Quadraphonic stereos and it's music.

Stereos usually had 2 speakers.

But if the stereo had four speakers or more, did that makes it Quadraphonic?

To know if the stereo was Quadraphonic, must the word Quadraphonic be mention in the manual? -Describing it as a Quadraphonic Receiver?

And what about Quadraphonic music being broadcast from the radio? How did that worked?

Does Joe Franklyn, Danny Styles, Symphony Sid or Phil Shapp plays any of this?

Ah those beautiful stereos with silver faces, needle light and silky turner. Those were the days!

Water by itself is miserable at carrying charge. You need the addition
of ions and, in this, case potassium hydroxide is used the alkaline
electrolyte. In other words, you are right!

I seem to recall quadraphonic LPs came and went in a year or two in
the Seventies. No one could figure out what to put in the rear
speakers. It didn't make sense to be sitting in the middle of a band,
sound-wise.

I noticed a similar problem when I use NiMHs in a portable scanner. The battery voltage drops so fast at the end of their discharge cycle, the scanner's low battery alarm only beeps once. It's easy to miss it if you're not paying attention.

The downside to NiMH's is they self discharge faster when not in use
than NiCd's.

4500. Firing up the Hallicrafters SX-110

Newsgroup: rec.radio.shortwave
Date: 2006-10-16 01:08:46 UTC
From: shoppa@trailing-edge.com
Message-ID: <1160960926.157094.211590@m7g2000cwm.googlegroups.com>
Source record: 94726

Hung a new antenna (the largest ever for my QTH) this weekend. Rope, wire, pulleys, trees. Previously most of my antenna attempts were loops or short wires in the attic. This one has them all beat hands-down in terms of length and height.

Took my old Hallicrafters SX-110 out of the crawlspace and dusted the top a bit. I've owned it for fifteen years now, using it for a few dozen hours in the early 90's when I got it, and a few dozen hours in the late 90's as the "upstairs radio" before the first baby came.

The SX-110 on the new antenna does damn good. All the major SW stations come in clearly and without much QRM from adjacent signals. Tuning action is pretty good, but some slip in the dial string contraption that I should look into clearing up. Selectivity is better than I remember, and while there's a few adjacent signals clobbered tonight on the fairly crowded bands it's better than I remember. Tone and audio quality coming through a little bookshelf speaker is surprisingly good, not necessarily very mellow but quite clear.

The WJ-8716 and R-390A do pretty good on the new antenna too.

Most of the modern solid-state receivers do pretty bad with the new long antenna though. Problem with the new antenna: the local (1 mile away) BCB station is about 10V RMS on the antenna, and shows up as intermod everywhere up and down the bands on all the consumer solid-state radios (little to no preselection). Time for me to dig out the old 630kc trap coil and see if it can knock that stupid signal down!

The SX-110 might go in my new office next week. I have a beautiful window looking down on Washington DC. I suspect I can get some good mid-day SWL'ing in with a loop around my enormous windows.... :-).

Tim.

13760 kHz and 15180 kHz at 0100 UTC are usually well-received at my QTH
(Edmonton, Alberta). The solar indices are A/K of 15/2 so my reception
of the higher frequencies is kaput at the moment.

Are you sure about the 5000-mah capacity of those Radio Shack NiCd's?
The highest capacity 'D' cell NiCd's I ever saw at Radio Shack were
4500-mah. I still have a set of Panasonic 'D' cell NiCd's which are
rated at 5000-mah. They're about eight years old and still going strong.
I payed about $11.00-US each. Now you can get NiMH's in that price range
with much higher capacities.

Which is why it's a good idea to let a freshly charged NiCd or NiMH
stand for a while to normalize the voltage before using it. This is
especially important for certain voltage sensitive devices. For example,
zapping an incandescent bulb in a flashlight with too much voltage can
shorten it's life. If you have to use the battery immediately after
charging it, you can reduce the over voltage by briefly shorting it with
a wire connected between both terminals.

Now that could be a good way to damage the battery.

There is a Wikipedia site that discusses the several techniques by
which the four channels of information could be stored on LPs.

http://en.wikipedia.org/wiki/Quadraphonic

BTW, I refer to equipment that reproduces four channels of information
as four-channel equipment, not as Quadrophonic or Quad. There is a
company in England, the Acoustical Manufacturing Company, that sells
equipment with the trade name Quad, most notably electrostatic
loudspeakers.

4510. Looking for SW receiver

Newsgroup: rec.radio.shortwave
Date: 2006-10-16 02:18:44 UTC
From: jacques <jacques@invalid.org>
Message-ID: <7_BYg.1$Zu2.17@nntpserver.swip.net>
Source record: 94736

Hello,
I currently own a Grundig Satellit 1400 sl but it is rather (more than 20 years) old and I hear too many crackles when I turn the nob to switch to others frequency bands. Furthermore, it becomes very difficult to stay tuned to exactly the same frequency, I always must adjust it by turning the main nob. It's really a pain to listen to sw. So I wish to buy a brand new one with the same performance in order to listen to international stations. One of the purpose is for DXing, hearing weak radio stations from all over the world. And cheap :) No more than 150 euros.
I am thinking to the Grundig yacht boy 80 wr 5408 or Sangean ats 505 since it seems to be the same receiver. A pocket sw radio is ok for me.
Its feature should be a range from 1600-30000 khz without discontinuity, "no holes" if you prefer. I saw at this web site (http://www.grundig.com/index.php?id=301&pid=291) an interesting one.
When searching the web, a few manufacturers state their radio is a full range 1600-3000 khz but when looking at a vendor in France (I live in this country), this is unfortunately no longer true since some frequencies are missing, I wonder why.
If anyone has usefull links or informations for buying one in France he is the welcome.

Most interesting is when stations, like several Clear Channel AMs in FL that
call themselves WFLA while those calls are only on the Tampa station they
own.

I see that the ampli on the degen antenna does good ..
I live in a place where the noise floor is LOW .. So ampli makes sense.

I saw that when on holliday in urban regions my am loop didn't add
anything to reception with a sony 7601 ...

I want to ampli freqs like the AM 500-1700Khz, but also SW 6MHZ-17Mhz ..

David: I have a modern Casio Keyboard that can play many different pipe organ sounds.

The Casio Keyboard has build in reflex speakers. Knowing how real pipe organs works, I was amazed on all of the different parts those speakers were able to produce at the same time. With depth and separation.

It's almost like a 3D audio experience. -If you will!

We had this crude technology for a very long time. Considering the history of the organ pipes. The human ear had always been conscience of the direction of sound.

But unfortunately, I think that many recording studio were either very expensive to record or not equipped with this type of equipment when Quadraphonic came out.

Most of pop/rock/rock&roll is usually a piece of music that is usually less then 4 min long and most of the instruments are playing at the same time. So a Quadraphonic recording of that might not have much of an effect.

Whereas, with Jazz or Classical music, the pieces are much longer. The different musical instruments will have individual parts to play and the many different combinations. Music of these types would be far better for Quadraphonic recording.

I guess if Quadraphonic technology came out 50 years earlier, it might of caught on better during the swing/bebop era.

Funny that 3D photography is about 100 year old if not more!

73----73----73---- 73----

Quad LPs (CD-4) were around for a while, but the front/back
information was encoded as an ultrasonic subcarrier, and a special
needle was needed. IIRC, a regular needle would destroy a CD-4 disc.

As for the encoding techniques, there was SQ, QS, logic-enhanced
variants... a childhood friend's parents had a full quad receiver with
all the various settings to cope with the formats. WCLV, Cleveland,
broadcast in quad for a while, and, I think, in Dolby-FM.

Some of the higher end audio shops in Cleveland ran quad ads on WCLV:
"Now I'm in front of you. Now I'm behind you. To your left, and to

your right. If you are listening on a regular stereo, you heard left, right, left, right. We at Audio Craft can show you how quadraphonic stereo can enhance your listening experience..."

Some of the newer crap that passes as high-end HF receivers (*cough*
R75 *cough*) have wide-open front ends. I ended up selling off most
of my gear and hanging on to an RX-340 and two IC-R8500s, both of
which have tank-like front ends.

In the meantime, a BCB filter like that from PAR can help, also, a
step attenuator when having problems can help with the front-end
overload.

(English version below)

Bonjour Jacques,

Mon conseil serait plutï¿½t similaire ï¿½ celui de Switcher, mais
ï¿½videmment, cela dï¿½pend de ton budget :

1) ATS 909 (j'en ai un, super radio !)
http://www.dxradio.co.uk/sangean/ats909.php
http://www.eham.net/reviews/detail/797
http://www.sardif.com/store/product_info.php?products_id=101

2) Sony 7600GR (perso j'ai un vieux SW-100, la synchro aide pas mal)
http://www.eham.net/reviews/detail/1534
http://www.leguide.com/sb/leguide/recherche/str_MotCle/Sony+icf+sw+7600gr/org/3/t/1/1061200.htm

3) Degen/Kaito 1103 (j'aurai ï¿½ l'acheter je prendrai la version Kaito
qui doit ï¿½tre mieux contrï¿½lï¿½ pour l'export). Pas cher.
http://www.eham.net/reviews/detail/5071
http://www.radiolabs.com/products/radio/Kaito/kaito-1103.php
Il y a aussi le Degen/Kaito 1102, plus petit, qui marche pas mal
parait-il...

4)Eton E5 (un DE1103 repackagï¿½ et avec une ergonomie amï¿½liorï¿½e)
http://www.radiointel.com/review-etone5.htm
Plus cher que le De1103.

Je te recommande le site www.radiointel.com et en particulier les pages
"Reviews", comme celle-ci :
http://www.radiointel.com/portwars.htm

Personnellement j'ai quelques accessoires en plus :
- antenne SW Sony AL-LP1 (super antenne !)
- antenne SW Kaito KA31 (= Degen DE31, trï¿½s bonnes perf mais dï¿½licate ï¿½
rï¿½gler)
- antenne MW Degen TG33 (mouais....)
- antennes filaires 5 et 7 m reï¿½ues avec les radios ATS909 et SW100,
mais je ne les utilises presque plus depuis que j'ai les antennes actives
- antenne externe de 10m env. avec un "balun" 9:1 (le tout fait maison
avec du matï¿½riel de rï¿½cupï¿½ration : 0 ï¿½) : perf ï¿½quivalentes aux antennes
actives, avec plus de bruit mais sans pile.

Pour acheter les radios, les sites Internet sont le plus pratique,
surtout pour les Kaito/Degen/Eton :
- Degen : les vendeurs chinois sur eBay (tiens ! je ne trouve plus le
1103 ?????)

- Kaito : perso je suis passï¿½ par www.radios4you.com mais il te faut un relais aux USA pour t'apporter ta radio
- Eton : assez dur ï¿½ trouver. Aux USA, sinon en GB ici : http://cgi.ebay.fr/ws/eBayISAPI.dll?ViewItem&item=180038382767

Le Sony 7600GR est dispo ï¿½ la FNAC et DARTY (cher !!!).

Pour les Sangean : si tu es en rï¿½gion parisienne Nord (ou que tu peux t'y dï¿½placer), un excellent magasin est Sarcelles Diffusion (en face de la gare RER), qui vend aussi par Internet (http://www.sardif.com/store/index.php?cPath=8_55_134)

Les sources franï¿½aises sont intï¿½ressantes si tu souhaites avoir un SAV accessible.

Bonne recherche,

Charly

------- English version ----------------

My advice will like Siwtcher's but obviously it will depends on your budget :

1) ATS 909 (I got one, super radio !)
http://www.dxradio.co.uk/sangean/ats909.php
http://www.eham.net/reviews/detail/797
http://www.sardif.com/store/product_info.php?products_id=101

2) Sony 7600GR (I have a SW100 and can tell the sync detect can help)
http://www.eham.net/reviews/detail/1534
http://www.leguide.com/sb/leguide/recherche/str_MotCle/Sony+icf+sw+7600gr/org/3/t/1/1061200.htm

3) Degen/Kaito 1103 (I would advice the Kaito version since it might have been better controled for exportation). Cheaper.
http://www.eham.net/reviews/detail/5071
http://www.radiolabs.com/products/radio/Kaito/kaito-1103.php
Il y a aussi le Degen/Kaito 1102, plus petit, qui marche pas mal parait-il...

4)Eton E5 (a relooked 1103 with a better interface)
http://www.radiointel.com/review-etone5.htm
More expensive thant the De1103.

I do recommand you the www.radiointel.com web site and in particular this web page :
http://www.radiointel.com/portwars.htm

I own some more accesories :
- SW Sony AL-LP1 anteann (super antenna !)
- SW Kaito KA31 antenna (= Degen DE31, good performer but difficult to adjust)
- MW Degen TG33 antenna (not that good, but helps)

- reel anteenas of 5 and 7 m bundled with Sangean and Sony radios, but I rarely use them since I have the active antennas
- home made external 10m long-wire antenna with a 9:1 "balun" : performs like the active antenna, with more noise but less baterries.

Internet sites are more convenients to buy these radios, mainly for Degen/Kaito/Eton :
- Degen : Chinese eBay reseller (ooops ! I can't find the 1103 anymore ?????)
- Kaito : I used www.radios4you.com but you need a contact located in the USA to bring the radio in Europe
- Eton : Difficult to find in Europe. English reseller here : http://cgi.ebay.fr/ws/eBayISAPI.dll?ViewItem&item=180038382767

The Sony 7600GR is available in FNAC and DARTY shops (expensive !!!).

For the Sangean : if you live in North of Paris or can go there, a good shop is Sarcelles Diffusion (located in front of the railway station), that is also selling on line (http://www.sardif.com/store/index.php?cPath=8_55_134)

French shops are adviced if you wish to have a local waranty.

Charly

I use Maha, but the NiMH D cells are awfully expensive, if I may say so, both the 7000 and the 11000. On the other hand, alkaline D cells are pretty pricey too.

The C Crane Quick charger is old but has the advantage that it charges flat-dead batteries where newer chargers refuse to recognize them, which you need if you have run one dead accidentally. Having started the charge in the old C Crane, switch over to a newer charger. Also it has a voltmeter that's handy, in case you need to test which battery is which or something.

Every small antenna arrangement responds identically, and has the same null and peaks. Two loops simply function as a single loop oriented in some other direction.

The complication is that there are two signals out there, the electric field and the magnetic field. Loops respond mostly to the magnetic field, and have an infinitely deep null for the magnetic field. They also respond somewhat weakly to the electric field, and it's the electric field response that ``fills in'' the infinitely deep nulls. The careful construction of loops is to, by balancing things out, try to eliminate as much electric field response as possible. The depth of the magnetic field null is already infinite and is unaffected by careful construction.

The reason the E and M fields don't combine like two M fields into a single antenna's response is that they're 90 degrees out of phase, and so can never cancel each other by reorienting the antenna.

Whips have a null at endfire that's similarly infinitely deep, except for magnetic field response filling _it_ in.

That seems sensible. After 10 hours of charging, the 1103 registered
max battery charge bars (though granted it might not be 100%).

I actually have the MAHA MH-C204W Battery Charger, also bought from
Thomas Dist, for use with a digital camera I got last year. It only
charges NiMH batteries and only has 2 charging circuits, but I assume
the technology is similar to the newer 401fs. I'll probably end up
charging the 1103's batteries in it as well, but wanted to at least
give it a chance to charge its own betteries since it has that feature.

I just ordered the C800S model. It's basically the same except that it
only does AA/AAA. Since I have no C or D rechargeables, I saved about
$40.

I'm in the business of buying a new receiver and have settled on
two options;

The AOR AR-7030Plus or the Japan Radio NRD-545.
Which one would have the highest dynamic range (IP3) and
sensitivity? Is the AR-7030 receiver so clumsy to operate as
many have stated?

I can't comment on the NRD-545, but I have a 7030+ and find it to be an excellent receiver. If you want to compare specs, just visit Universal Radio's website (www.rffun.com) and check 'em out.

Mind you, if I were in your position, I would not buy either one of these receivers until the new Kneisner and Doering receiver is available and some reviews of it have surfaced.

> even owned by Clear Channel.

Is that one of those "made up" callsigns? I don't know how common
those are now, but there was a time when they were used a lot.
As someone said, they can call themselves whatever they like (kind
of like a business name) so long as they do properly identify themselves
when needed.

So one local fm station used to be "FM96", but then morphed into "The Mix".
In Toronto, there is/was "Q107". CBC radio here in Canada simply
calls itself "CBC Radio One" (for the AM network, which in the large
cities are now on the FM band) and "CBC Radio Two" for the stereo
network. Vermont Public Radio only announces call signs when it is
required, instead being "VPR" most of the time. I couldn't tell
you what the "local" (it's in Burlington or Plattsburgh) FOX tv station's
callsign is, since they refer to themselves on a far bigger basis as
"FOX 44".

It's a marketing too. Once upon a time, stations would try to get
specific callsigns, to match their intent or somebody's initials.
That's gotten harder, as stations have proliferated. So they
come up with some other branding process, that has nothing to do
with the legal callsign, but which so many refer to them as, one
might think someone is issuing rather odd call signs.

That is why it is being called a coverup. There were apparently
rumors circulating, but the key people who knew real evidence, who
were all Republicans, tried to keep it quiet, and went only to
Hastert's staff, and to one member of the Ethics committee, who did
not tell the other members of the Ethics Committee.

If they did something illegal, then the courts will determine it.

The courts determine whether private organizations violated the law
and deserve to be sanctioned. The public decides whether our elected
representatives violated their responsibilities to "we the people" and
deserve to be reelected.

Imagine the following scenario: during the height of election season, a high-placed Republican donor is discovered to have looted millions of dollars from the retirement funds of individuals and companies he manages, and then contributes more than $70,000 to his state GOP party. When the fraud is discovered, the state party not only refuses to give the money back to the victims, but characterizes calls from Democrats to return the ill-gotten gains as "a cheap Democratic ploy" - even as top GOP elected officials in the state demand that their party return the money.

Is it hard to imagine the virtual non-stop coverage that both local and national media would devote to the GOP scandal, with constant reference made by Democratic Party-linked talking heads and mainstream media "reporters" incessantly predicting how the scandal will derail Republicans' chances in the gubernatorial and U.S. Senate races under way in that state?

The scenario described above has been unfolding for months in the Volunteer State, but it isn't the Tennessee Republican Party on the working end of the scandal. Instead, local news reports indicate that the Tennessee Democratic Party has received $52,250 for state races and $18,000 for federal races from a major Democratic donor, Barry Stokes, who was arrested by federal officials on Friday for embezzling retirement funds from his clients - money Tennessee Democratic Party Chairman Bob Tuke vowed last Friday to keep even after one of the top state Democratic Party officials, State Sen. Doug Jackson, urged his own party to return the money. In a letter to Tuke, Jackson said that keeping the money would be a "travesty." In recent months, two Tennessee Democratic Congressional candidates have returned campaign contributions from Stokes.

The intramural exchange between Jackson and his Democratic Party chairman came only after the Tennessee Republican Caucus returned $1,000 earlier last

week that had been donated by Stokes in 2003 - a move the Democratic Chairman Tuke described as a "cheap Republican ploy." But in a statement, the Tennessee Republicans explained, "our Caucuses want no part in receiving stolen pension funds - or any other stolen money or goods for that matter." Their Democratic counterparts, however, don't seem to share their scruples.

As the scandal threatens the reelection prospects of Tennessee Democratic Governor Phil Bredesen - one of the few remaining Democratic governors in the Red State South and the only Democrat to win statewide office in Tennessee since 1992 - and potentially dashes the hopes of Rep. Harold Ford, Jr. (D-Memphis), who Democrats nationwide hope will pick up a US Senate seat in a Republican-leaning state (the seat being vacated by Senate Majority Leader Bill Frist), there has been no mention of the escalating scandal in the national mainstream media - quite unlike a similar scandal last year involving Ohio Gov. Bob Taft and a GOP supporter who has pled guilty to stealing money from an account he managed for the Bureau of Worker's Compensation. Despite the national media blackout of the rapidly unfolding Democratic scandal, the matter is being superbly covered by local bloggers and grassroots journalists, including Bill Hobbs and Terry Frank, and by the major Nashville newspaper, The Tennessean.

Looking at the known facts so far in the Tennessee case, it is much worse than the hypothetical scenario I previously described. Not only is the Tennessee Democratic Party refusing to return the stolen retirement money to the US Bankruptcy Court trustee handling the matter (unlike Tennessee Republicans), but Barry Stokes - the man accused of embezzling the funds and who used his position within Gov. Phil Bredesen's highest circles to pitch flexible spending accounts managed by Stokes' company, 1Point Solutions, to the State Treasurer's office - is represented in the matter by Bredesen's 2002 campaign manager and current campaign treasurer, lobbyist Stuart Brunson. Stokes' company was also awarded a contract last year by the Tennessee Board of Regents, which oversees most of Tennessee's colleges and universities, to manage the flexible spending accounts of 14,000 Board of Regents employees. Last week, the Board of Regents employees discovered that debit cards linked to their accounts with 1Point no longer worked.

Also last week, Bredesen spokeswoman Lydia Linker revealed that Stokes met with Bredesen chief-of-staff, Dep. Gov. Dave Cooley, on several dates in 2003 and 2004 seeking assistance on a custody dispute. The ties between Stokes and Gov. Bredesen continue until today. In fact, Stokes is still listed on Bredesen's campaign website as one of the "Top Business Leaders Endorsing Bredesen."

According to a September 26th article in The Tennessean, even as Stokes' financial empire began to crumble in recent months under pressure from multiple lawsuits, his giving to the Tennessee Democratic Party continued unabated. On one day this past June, as one Nashville law firm was demanding the transfer of their employees' 401(k) and flexible spending accounts, Stokes was giving the Tennessee Democratic Party a huge $20,000 check at their annual Jackson Day fundraiser at the historic Ryman Auditorium, former home of the Grand Ole 'Opry in downtown Nashville (Stokes had also given

$20,000 to the Tennessee Democratic Party in May 2005).

The victims of the fraud by Stokes and his company are widespread. Among them are 1,000 Nashville Metro government employees that had accounts handled by 1Point (Nashville Metro government is controlled by Democrats). The contract was awarded even though the company had not submitted an audited financial statement and annual report, as had the other companies submitting bids.

According to an article in Saturday's edition of The Tennessean, the 1Point web began unraveling in April when the New York-based Jewish Funds for Justice filed a lawsuit seeking the return of retirement funds Stokes and his company had been given to manage. That lawsuit was eventually settled, but the money used to pay off Jewish Funds for Justice came from an account that Stokes was pouring millions into from other clients to settle the claims and pay personal expenses.

In mid-September, an auto-parts manufacturer based in Smyrna, Tennessee, was told by one of Stokes' attorneys that $7 million given to 1Point to manage was "gone and likely unrecoverable." Within days, several other clients also filed claims in court against the company. With lawsuits rapidly piling up, 1Point was forced into bankruptcy last month. The bankruptcy trustee has discovered that in the weeks after the 1Point accounts had been frozen by the court, Stokes withdrew at least $40,000.

The bankruptcy trustee also announced last week his discovery that after one client had transferred $650,000 to 1Point in May and June, not only did the money never make it to the investment houses, but $100,000 of those funds were deposited into a trust account for Stokes' father, and Stokes had pocketed $30,000 and spent another $9,300 with a Tokyo art gallery. Stokes is reputedly one of the world's largest collectors of Japanese block prints, with a collection estimated at $2.5 million. But bankruptcy officials have discovered that at least $1 million worth of paintings have disappeared from storage.

Ironically, included amongst 1Point's victims are employees of the Tennessee Democratic Party. But Democrats should have known better, notwithstanding his cozy relationship with the Tennessee Democratic elite, as indicated by Stokes' troubled financial past, as described last week by The Tennessean:

Barry Stokes came onto the Nashville scene three or four years ago, spending lavishly at fundraising galas, often showcasing his valuable museum-quality Japanese print collection to raise money for social and cultural causes.

He rapidly grew his business, signing up clients such as Metro government, a local law firm and the state of Louisiana and even handling the retirement accounts for employees working for the Tennessee Democratic Party, to which he contributed nearly $50,000.

But if those businesses or agencies that contracted for his services had looked deeper into his background, they might have thought twice. A closer examination by The Tennessean revealed an earlier bankruptcy, failed computer ventures in Houston, a termination from a financial company and a

string of federal and state tax liens that paint a problematic picture of the 49-year-old's business life.

As the Tennessee Democratic Party responded to calls from outsiders and members from their own party to return the stolen pension and retirement funds to the US Bankruptcy trustee, the Party spokesman, Mark Brown, dismissed concerns that they intended to keep the pilfered money, which presumably is being spent to reelect Gov. Bredesen and to send Harold Ford to the US Senate (hailed by many as "this year's Obama"), and stated that the state party's primary concern was for the four employees who have lost money in the 1Point scandal, instead of the thousands of employees and retirees in Tennessee and around the country who are also victims. "Our sole focus at this point is to protect the interest of the four Tennessee Democratic Party employees whose retirement funds were managed by 1Point Solutions," Brown told the press late last week.

What potential impact this story might have on the races in Tennessee remains to be seen. The race for the open US Senate seat is being watched nationally as the race between Harold Ford and Bob Corker remains close, and the story is getting a lot of local coverage, which could potentially hurt Ford and Bredesen, as well as other Democrats running for office in the Volunteer State.

But the added scandal of the Tennessee Democratic Party keeping stolen retirement funds doesn't seem likely to get near the national media attention as had the similar GOP scandal in Ohio, which is hurting many Ohio Republicans who had no involvement in the matter. Ohio Democrats have benefited tremendously from coverage of the Taft-Bureau of Worker's Compensation scandal in multiple stories by the New York Times, Washington Post, and other national media outlets, and the Democratic National Committee is airing numerous campaign commercials in Ohio trying to tie unconnected Republicans to the affair.

But nothing in the Ohio GOP scandal can remotely compare to the Tennessee Democratic Party's decision last week to knowingly profit from the crimes of one of its major donors and the brazen callousness of the party chairman, Bob Tuke, to the plight of thousands of Tennessee citizens who probably will not see their retirement accounts restored anytime soon. In comparing the ongoing reporting on the Ohio story with the current national coverage of the explosive Tennessee scandal that has escalated since earlier this year, the mainstream media silence on the latter has grown deafening.

> Does Joe Franklyn, Danny Styles, Symphony Sid or Phil Shapp plays any of
> this?

AM is mono and FM is stereo - there's no quadrophonic....so you
wouldn't notice if they ever played this stuff.

Joe Franklin retired from WOR some time last year, I believe.

Danny Stiles spins records on a few pay-for-play local AM stations here
in New York.

AM is mono, so you wouldn't notice if whatever he plays is in stereo
or not. Let's see....WNYC-AM 82 and various slots on WPAT-AM 93.

Once I even heard Stiles on WRCA-AM 1330 in Waltham/Boston, Mass.

I swear he's gotta be what...about a hundred or so now? He used to be
good listening when I was a kid, but voices don't age well on the radio
and after a while, deejays should know when to pack it in and retire.

Phil Shapp... is that guy ever going to graduate from Columbia U.? That
dude's been on college station WKCR-FM since I was a 15 year
old...possibly even longer (I'm 30 now). I wonder if they pay him - so
much for student-run radio. I remember during certain shows, the
stereo generator would be turned off.

WKCR has always been an interesting one - I remember a guy they had who
would spin opera records...and he had some weird speech defect...I
think he was hard of hearing or something. Wonder what happened to
him.

Symphony Sid.....his name sounds familiar...but I don't think I've ever
heard him. Ahh well.

Bias? Hmmm. The "Foley scandal" gets another mention on the front page of Thursday's Washington Post, but you'll have to turn to page A-3 to see the article headlined "Reid Land Deal Under Scrutiny." The sub-head makes it sound like this is nothing more than a question of "disclosure requirements." It's not the land deal itself -- but the way Reid reported it, the Washington Post suggests. Here's the first sentence: "Harry M. Reid of Nevada, the Senate's top Democrat, said yesterday that he was in discussions with the chamber's ethics committee to determine whether he should amend his financial disclosure forms to include details of a real estate transaction that allowed him to collect $1.1 million." The report in USA Today raises deeper questions about Reid's apparently calculated effort to keep his land dealings with "a behind-the-scenes power broker" under the radar.

I wouldn't touch a NRD545D - my top DXing pals all sold them off after finding their filters were inadequate and their IP3 didn't keep out the close in interference.

The AOR7030+ has the best specs of any receiver but not everyone can handle it's impossible ergonomics - I'm one of them and found I just couldn't handle the difficult operating system - others swear by it though once they get used to it.

IMHO you could do no better than a used Drake R8B from eBay - a superb radio with great ergonomics.
See my side by side test of a Drake R8A with a 7030 at:
http://www.dxing.info/equipment/aor_ar7030_drake_r8a_plimmer.dx

I don't know what K&D will charge for the KWZ-30/2. It will be
expensive, no doubt, but a lot is going to hinge on the options you
plunk for. If you decide you want the extended frequency range and the
spectrum display, for example, that'll have a big impact on price.

I had a original version 7030 here for a while, I was thinking about buying it from a friend, but even after I got used to it, it's operation still annoyed me way too much to ever buy one. It's a great receiver, but IMO, just a big hassle to use. Too small for it's own good.

If I had the $$ I would be sitting a few feet from a NRD-545 now. The 7030 plus probably is better in some ways on AM, but I do Utes, and in SSB, it's close enough that the vastly superior ergonomics of the JRC would win.

But that's me. It's your money.

That. as you say is your opionion, IMHO, it's a great radio with terrible ergonimics. Some people like dials, and knobs and buttons. Others prefer radios like the R8, which has the ergonomics of a satellite receiver, not a radio.

I would buy a Kenwood R-5000. The later R8 has a useable sync detector for AM, the R-5000 works almost as well in ECSS.

Geoff.

Specs are a little better, the audio is much more pleasing to the ear for general listening than the JRC. Audio on the JRC is a bit harsh for program listening. Good for intelligibility, if you're into CW, SSB, and utes. But, for general listening it's fatiguing.

As for the AOR O/S. I'll tell you from first hand experience....it's different. It takes some getting used to. That said, it becomes second nature pretty quickly if you use the radio every day. And with the remote at hand, many of the nested functions in the menu trees are brought out on their own buttons.

The major objection is that the radio is small. Performance is top drawer, often rivalling commercial grade receivers. But like other John Thorpe designs, the radio has a small footprint on the desk, and if you have thick hands, it can be less satisfying to operate than a boatanchor with big controls and lots of space between them.

For my own listening, I use mine every day. EVERY day.

It sits on a shelf directly above the Ten-Tec and it's the one I reach for first. Mostly, because it's the one connected to the cabinet with the twin Stromberg Carlson 12 inchers, and Electovoice horns.

I wouldn't touch a NRD545D - my top DXing pals all sold them off after finding their filters were inadequate and their IP3 didn't keep out the close in interference.

The AOR7030+ has the best specs of any receiver but not everyone can handle
it's impossible ergonomics - I'm one of them and found I just couldn't handle the difficult operating system - others swear by it though once they
get used to it.

IMHO you could do no better than a used Drake R8B from eBay - a superb radio
with great ergonomics.
See my side by side test of a Drake R8A with a 7030 at:
http://www.dxing.info/equipment/aor_ar7030_drake_r8a_plimmer.dx

==========
==========

Gisle.

I have to go with John on this. the 7030+ has to be the most "loved" and "hated" radio
ever made. some love it, a bunch hate it. check the post on yahoo groups on both. i have both
here, and a bunch other desktops. the big turn off to me on the JRC is the sound. the 535 also
has the famous mute trouble. the AOR is a fantastic receiver. it just does it all. i have no
trouble with the OS. love the remote, it's makes operation easy. the killer ap is "wings".
it's a fantastic control program, and it's free. for me it's no question the AOR is my
favorite receiver. and, the service from AOR UK is second to none. run a google and read
the test, and comments. if you can get one from a friend, all the better. you have to sit
in front of one for a few hours to realize what this little radio can do. a lot of people
miss the knobs, i don't. if i want to twiddle a few knobs i'll turn on one of my drakes.
so, YMMV!

Father Michael.

by the way, JRC has a new receiver coming out first of the new year. you
may want to wait
for that be for putting down the large bucks...

Source record: 94661

Boy this is a tough one. I have owned the 7030 & currently own a 545

Best IP3 goes to the 7030 by a bunch.

Not sure which is best on the sensitivity but both have more than
enough.

I did not like the "tree " menu system on the 7030. I think it would be
something you could get used to however.

I question the reliability of the controls on the 7030.

For digging out DX & splits on the AM broacast bands the 7030 would
be much better. I live in Central part of Kentucky so that kind of
DX...TA & TP is just a dream.

For the pleasure of just setting down to the receiver & using it
nothing will beat a JRC receiver IMHO . So smooth the controls... they
are. And they are Pretty Pretty

I wonder how many of us can really utilize the better IP3 & how often.

I listen to the tropical bands quite often & hope to hear PNG & Indo's
in the early mornings & for that does the better IP3 help??? Those
bands are far from crowded now. Or does the ease of use matter more.

For Utilites SSB or Digital listening I do not think the JRC's can be
beat.

Both are fine receivers but designed for different purposes IMHO

Bottom line......where & what kind of listeing do you plan to use the
receiver for.

Buy the one that YOU like the best.

I would also buy Used.

I would also buy cheaper & more receivers. Heck how can a guy that
monitors the Utes have less than 4 receivers going at the same time.

The KOH is dissolved in water. When you over charge, it is the Water
that dissociates, ultimately there isn't enough water to keep the KOH
dissolved and the battery is finished.

In the late 60's I remember playing around with a British system that produced a third channel from a normal stereo record. This back channel created the ambience of the hall from the differences between the left and right channels. It was very simple to hook up. All you did was hook up the new speaker to the positive leads of the left and right speakers. The record had to have been recorded in a hall to recover the ambience: records made on mixer boards had no ambience or echo. A separate amplifier was needed to get the full effect. Some of the boffins of the time did the math but I don't recall it now. I do recall getting the effect on Sgt Pepper...good times.

That depends on how much you are willing to spend. I feel that its always better to put up the best antenna set-up that you can, as opposed to spending more money on the receiver.

Dear Gisle,

I have no experience with the JRC NRD-545 so I cannot comment on it or compare it with the AOR AR7030 Plus I've owned for two and a half years now.

In my opinion, the AR7030 Plus, properly fitted out, is definitely one of the finest performing receivers available, certainly far-and-away the best I have ever owned.

Some people like its ergonomics and, obviously, some dislike them. Personally, I had no problem with it at all, the analogy being that if you can operate a menu-driven VCR or home-theater receiver, then operating the AR7030 is "a piece of cake." (I'm in my sixties in age.)

There is, however, another option which no one so far has mentioned here (and it applies to the JRC NRD-545 as well): there is a FREE computer-control program called "RxWINGS" which allows you to control the receiver via your computer. You download the program, set it up on your computer, plug the computer into the AR7030, and off you go.

I rarely use the controls on the radio itself - "RxWINGS" even turns the receiver on and off, and I never use the remote control any more. The only facilities of the radio that "RxWINGS" does not control is the Notch Filter/Noise Blanker. (The remote doesn't control them either.) Every other function can be computer-controlled and on the screen are discrete controls (the virtual equivalent of a receiver loaded with individual knobs and buttons).

"RxWINGS" even allows functions that are not available such as scanning (just like your $100 portable!), instant muting and un-muting (should the telephone ring, for example), and quite a few others. It is rather an amazing program and, as I mentioned, it works with the NRD-545 as well as the AR7030.

And it costs you nothing!

This is something to carefully consider when choosing your receiver. In other words, don't let the possibility of your disliking the AR7030's ergonomics deter you from buying the receiver should you determine it is the better of your two choices.

I researched communication receivers extensively for many years before I settled on and bought the AR7030 Plus. I dealt directly with the factory to customize my receiver to my requirements (after almost fifty years of SW listening, I know what I want and need!) and the radio was prepared to my specifications. I dealt with The Shortwave Shop in the

UK, a dealer who was willing to work with me. There are other English dealers as well who will custom-order an AR7030 for you if you so desire, but, frankly, buying from Universal with several of the options they offer should result in a satisfactory receiver. This would also apply to a JRC NRD-545.

For shortwave listening purposes, I do not see that the $8000 - 10000 receivers will afford the average DXer any advantages over the $1500 - 2500 radios, "bragging rights" excepted. That, of course, is my opinion.

The AR7030 is able to offer its really superb performance at its relatively low price (compared to, say, the Ten-tec RX-340) due to the fact that it DOES use menu-driven controls just like the above-mentioned VCR, home-theater receiver, your cell-phone, and myriad other devices which have become so familiar to us these days. All of these products are priced much lower than one should have expected due to the fact that relatively costly discrete controls are eliminated. I think iI is just because the AR7030 is the only truly menu-driven SW receiver on the market that some users are "negative" about it, never having seen, owned. or operated such a set previously. But, of course, everyone is entitled to his or her own opinion.

I like mine and I think you would like it too.

Best,

Joe

P.S. Don't forget the antenna. In order to derive maximum performance and pleasure, both of these receivers require the finest antenna you can get.

Dear HF Guy,

You are absolutely correct in your comment about self-discharging. However, if you use your radio on a daily basis for any length of time, you will never have that problem. NiMHs lose about 1% per day - 30% per month if not used. The way I use my radios, I have to recharge the batteries well before any self-discharging effects are noted.

But your comment is quite correct and is something perhaps a casual or infrequent user might want to consider.

Best,

Joe

Actually, I'd say pagers aren't on topic. The fact that there is all
kinds of junk here does not negate the fact that it's off topic.

If someone was asking about listening to paging transmitters, for
the sake of doing so, then it would fit the newsgroup.

Despite the "shortwave" in the title, the original intent was for
people who listened to radio as a hobby, be it AM DXing, FM DXing,
shortwave broadcast, listening to "public service bands" or whatever.
(Since there is at least one newsgroup for scanners, the latter does more or
less it there better).

It isn't about amateur radio, except for those who simply listen
to the ham bands. There is a whole. rec.radio.amateur.* hierarchy for
discussing the things related to the hobby of amateur radio.

It sure isn't intended for heavy political discussions that can
only be connected to shortwave radio only because someone mentioned something
about such a topic on shortwave sometime.

Newsgroups decline when nobody speaks up about the off topic junk.
Speaking up against a pager post may not stop all the rest, but it is an
attempt at trying to prevent an even greater slide.

The question about the pager was a consumer issue, dealt with in a
consumer related newsgroup, or even a city specific newsgroup where there
would be other locals who could point the poster to a local paging company.

I would buy some wire and connectors for less than $10 and see if that met my needs first. You can always spend more later. One of the best antennas I ever used was a random wire srtung through a second story attic. Coincidentally, I was in the attic today trying to figure out how I would string a long wire...

I have one also and it is a good radio.

You also don't have to worry about the silver rubbing off like you do on a 909.

I don't know. I never had unrestricted access to a quad system. what I did -- and this works only on some systems and may be downright unsafe on others -- was to set up a Hafler Matrix. This is a passive arrangement of the rear speakers to pull out L-R and R-L information for back speakers, just wiring them to an existing stereo.

Being a passive system, there isn't a lot of control on what you can do with it, but it will pull out the surround/quad information in the right environment.

To wire a Hafler Matrix, you need a system with a common ground for the left and right channels. Since this isn't a graphic interface, I'll draw out the wiring on a couple lines:

Left + on stereo <----> Red on Left/Rear speaker
Black on Left/Rear speaker <----> Black on Right/Rear speaker
Red on Right/Rear speaker <----> Right + on stereo

The speakers face each other and should be several feet back from the listener to introduce a little bit of delay. The arrangement takes some fiddling to get right, but works on the cheap.

FWIW, the Wikipedia article on Quad elsewhere in this thread claims that the Hafler Matrix works as well as any other quad/surround method

for pulling the surround info out. I find that *extremely* hard to
believe. But it is a cheap, workable solution.

Regards,

Seems as though it's a Euro Pirate frequency. I've heard Mystery Radio there before.

I'm also hearing the techno music here upon checking at 2235.

I just checked back in my past few issues of the NASWA Flashsheet &
Gerry Dexter has reported Radio Mystery here (T)

Maybe I can get a good ID soon.

Thanks Ace

i still have some old quad equipment around here. i played around with it as a youngster and it got me interested in psycho acoustics. this is the study of how people hear and perceive sounds and the relationship between hearing and perceiving sound. it turns out that four discreet channels are no better than an ambience recovery set-up like hafler or dolby. this is because we only have two ears so direction is determined by the time lag between sounds registered in opposite ears. the ears (or rather the brain) is easily fooled by an artificial sound field like dolby surround sound. the different channels need not be discreet and it is easier to process and record using encoding or phase cancelling and recovery techniques. it all can be done with stereo signals and various schemes like ambience recovery channels or even simple acoustic reflex tuning of a hall (this gives a surround sound effect from a simple stereo signal using only the echoes bouncing back from the walls or baffles in the playback hall) in short quad died because it was complicated, redundant and a resource wasting format. a equal effect was obtained easier with the systems in use today. so why did i keep my quad stuff? maybe as a reminder of my foolish youth.

Republicans need to learn how to fight their filthy, perverted, pedophilic urges.

(1) Republican Mayor Philip Giordano - 37 year sentence for sexually abusing 8 and 10 year old girls.
http://www.armchairsubversive.com/Giordano.htm

(2) Republican Congressman, Donald "Buz" Lukens, convicted of having sex with a minor.
http://www.leadershipinstitute.org/04RESOURCES/Speeches-SurvivalValue...

(3) Republican fundraiser, Richard A. Delgaudio, convicted of child porn charges.
http://www.thewbalchannel.com/news/2153721/detail.html

(4) Republican activist, Mark A. Grethen, convicted on six counts of sex crimes involving children.

(5) Republican activist, Randal David Ankeney, convicted of assaulting a 14-year-old girl.
http://www.thedenverchannel.com/news/1130885/detail.html

(6) Republican Congressman, Dan Crane, had sex with a minor.
http://archive.salon.com/col/cona/1998/10/05cona.html

(7) Republican activist and Christian Coalition leader, Beverly Russell, admitted to an incestuous relationship with his step daughter.
http://wlo.org/nw/nww5.html

(8) Republican anti-abortion activist, John Allen Burt, was charged with sexual misconduct involving a 15 year old girl.

(9) Republican talk show host Jon Matthews pleaded guilty to exposing his genitals to an 11 year old girl.

http://abclocal.go.com/ktrk/news/111203_local_matthews.html

(10) Republican congressman, Robert Bauman, Marlyand: Married dad of four ,was charged with committing oral sodomy on a 16-year-old boy. (Salon, 1.1.04) http://www.glinn.com/news/h122989a.htm

(11) Republican activist, Marty Glickman convicted on four counts of unlawful sexual activity with a juvenile and one count of the delivery of LSD.

(12) Howard L. Brooks, a Republican staffer, charged with molesting a 12-year old boy and possession of child pornography. http://www.sacbee.com/static/live/news/calreport/N2001-11-22-2300-0.html

(13) Republican Senate candidate, John Hathaway, was accused of having sex with his 12-year old baby sitter.

(14) Republican preacher, Stephen White, arrested after offering to a 14-year-old boy to perform oral sex on him.

(15)Republican state Rep. Brent Parker arrested for soliciting sex from an undercover officer posing as a male prostitute.

(16)Douglas County Election Commissioner Pat McPherson arrested for fondling a 17-year-old girl.

(17) Republican anti-abortion activist Nicholas Morency pleaded guilty to possessing child pornography on his computer and offering a bounty to anybody who murders an abortion doctor.

(18) Republican legislator Edison Misla Aldarondo was sentenced to 10 years in prison for raping his daughter between the ages of 9 and 17.

(19) Republican Committee Chairman Jeffrey Patti was arrested for distributing a video clip of a 5-year-old girl being raped.

(20) Republican anti-gay activist Earl "Butch" Kimmerling was sentenced to 40 years in prison for molesting an 8-year old girl after he
attempted to stop a gay couple from adopting her.

(21) Parker J. Bena, Virginia Republican activist: Convicted in 2001 of possession of child pornography. (Salon, 1.1.04)

(22) Kevin Coan, Missouri: Arrested in Illinois in 2001 for offering to pay for sex over the Internet from a 14-year-old girl -- who turned out to be male police officer working a chat-room sting. (Salon, 1.1.04)

(23) Richard Gardner, Nevada: Convicted in California in 1988 for lewd and lascivious behavior with a child under the age of 14 -- a felony sex crime. The victim was his own 12-year-old daughter. Investigation led to exposure of two additional sex-crime convictions, one involving the same daughter, and one involving another daughter under age 14. (Salon, 1.1.04)

(24) Mark A. Grethen, Virginia: Convicted in 2002 on six counts of sex crimes against children. (Salon, 1.1.04)

(25) Jeff Patti, Sparta, N.J., GOP Chair: Arrested on child pornography charges. (NJH, 2.8.05)

(26) Fact: There's an entire newsgroup just for right-wing Christian pedophiles. Police say a Pierce County foster dad charged with molesting and photographing young boys in his care posted messages in an Internet newsgroup catering to Christian pedophiles....describing himself as a "boylover that has devoted my life to boys and introducing the love of Christ to them." [And then this typical hypocrite says] "homosexual desire is unnatural".

(27) Serial killer/rapist Ted Bundy campaigned for the Republican Party

(28) Republican racist pedophile and United States Senator Strom Thurmond had sex with a 15-year old black girl which produced a child.

(29) Republican activist Lawrence E. King, Jr. organized child sex parties at the White House during the 1980s.

(30) Republican lobbyist Craig J. Spence organized child sex parties at the White House during the 1980s.

* Republican anti-abortion activist Howard Scott Heldreth is a convicted child rapist in Florida.

* Republican County Commissioner David Swartz pleaded guilty to molesting two girls under the age of 11 and was sentenced to 8 years in prison.

* Republican judge Mark Pazuhanich pleaded no contest to fondling a 10-year old girl and was sentenced to 10 years probation.

* Republican anti-abortion activist Nicholas Morency pleaded guilty to possessing child pornography on his computer and offering a bounty to anybody who murders an abortion doctor.

* Republican legislator Edison Misla Aldarondo was sentenced to 10 years in prison for raping his daughter between the ages of 9 and 17.

* Republican Mayor Philip Giordano is serving a 37-year sentence in federal prison for sexually abusing 8- and 10-year old girls.

* Republican campaign consultant Tom Shortridge was sentenced to three years probation for taking nude photographs of a 15-year old girl.

* Republican racist pedophile and United States Senator Strom Thurmond had sex with a 15-year old black girl which produced a child.

* Republican pastor Mike Hintz, whom George W. Bush commended during the 2004 presidential campaign, surrendered to police after admitting to a sexual affair with a female juvenile.

* Republican legislator Peter Dibble pleaded no contest to having an inappropriate relationship with a 13-year-old girl.

* Republican activist Lawrence E. King, Jr. organized child sex parties at the White House during the 1980s.

* Republican lobbyist Craig J. Spence organized child sex parties at the White House during the 1980s.

* Republican Congressman Donald "Buz" Lukens was found guilty of having sex with a female minor and sentenced to one month in jail.

* Republican fundraiser Richard A. Delgaudio was found guilty of child porn charges and paying two teenage girls to pose for sexual photos.

* Republican activist Mark A. Grethen convicted on six counts of sex crimes involving children.

* Republican activist Randal David Ankeney pleaded guilty to attempted sexual assault on a child.

* Republican Congressman Dan Crane had sex with a female minor working as a congressional page.

* Republican activist and Christian Coalition leader Beverly Russell admitted to an incestuous relationship with his step daughter.

* Republican governor Arnold Schwarzenegger allegedly had sex with a 16 year old girl when he was 28.

* Republican congressman and anti-gay activist Robert Bauman was charged with having sex with a 16-year-old boy he picked up at a gay bar.

* Republican Committee Chairman Jeffrey Patti was arrested for distributing a video clip of a 5-year-old girl being raped.

* Republican activist Marty Glickman (a.k.a. "Republican Marty"), was taken into custody by Florida police on four counts of unlawful sexual activity with an underage girl and one count of delivering the drug LSD.

* Republican legislative aide Howard L. Brooks was charged with molesting a 12-year old boy and possession of child pornography.

* Republican Senate candidate John Hathaway was accused of having sex with his 12-year old baby sitter and withdrew his candidacy after the allegations were reported in the media.

* Republican preacher Stephen White, who demanded a return to traditional values, was sentenced to jail after offering $20 to a 14-year-old boy for permission to perform oral sex on him.

* Republican talk show host Jon Matthews pleaded guilty to exposing his genitals to an 11 year old girl.

* Republican anti-gay activist Earl "Butch" Kimmerling was sentenced to 40 years in prison for molesting an 8-year old girl after he attempted to stop a gay couple from adopting her.

* Republican Party leader Paul Ingram pleaded guilty to six counts of raping his daughters and served 14 years in federal prison.

* Republican election board official Kevin Coan was sentenced to two years probation for soliciting sex over the internet from a 14-year old girl.

* Republican politician Andrew Buhr was charged with two counts of first degree sodomy with a 13-year old boy.

* Republican politician Keith Westmoreland was arrested on seven felony counts of lewd and lascivious exhibition to girls under the age of 16 (i.e. exposing himself to children).

* Republican anti-abortion activist John Allen Burt was charged with sexual misconduct involving a 15-year old girl.

* Republican County Councilman Keola Childs pleaded guilty to molesting a male child.

* Republican activist John Butler was charged with criminal sexual assault on a teenage girl.

* Republican candidate Richard Gardner admitted to molesting his two daughters.

* Republican Councilman and former Marine Jack W. Gardner was convicted of molesting a 13-year old girl.

* Republican County Commissioner Merrill Robert Barter pleaded guilty to unlawful sexual contact and assault on a teenage boy.

* Republican City Councilman Fred C. Smeltzer, Jr. pleaded no contest to raping a 15 year-old girl and served 6-months in prison.

* Republican activist Parker J. Bena pleaded guilty to possession of child pornography on his home computer and was sentenced to 30 months in federal prison and fined $18,000.

* Republican parole board officer and former Colorado state representative, Larry Jack Schwarz, was fired after child pornography was found in his possession.

* Republican strategist and Citadel Military College graduate Robin Vanderwall was convicted in Virginia on five counts of soliciting sex from boys and girls over the internet.

* Republican city councilman Mark Harris, who is described as a "good military man" and "church goer," was convicted of repeatedly having sex with an 11-year-old girl and sentenced to 12 years in prison.

* Republican businessman Jon Grunseth withdrew his candidacy for Minnesota governor after allegations surfaced that he went swimming in the nude with four underage girls, including his daughter.

* Republican director of the "Young Republican Federation" Nicholas Elizondo molested his 6-year old daughter and was sentenced to six years in prison.

* Republican benefactor of conservative Christian groups, Richard A. Dasen Sr., was charged with rape for allegedly paying a 15-year old girl for sex.
Dasen, 62, who is married with grown children and several grandchildren, has allegedly told police that over the past decade he paid more than $1 million to have sex with a large number of young women.

*PENDING - Republican Mayor John Gosek, 58, of 275 West 7th Street, Oswego, was arrested for the federal offense of "using a facility in interstate commerce (a telephone) to knowingly attempt to persuade, induce, entice, and coerce an individual under the age of 18 years to engage in sexual activity for which he could be charged with criminal offenses, that is, rape in the third degree and criminal sexual act in the third degree" in violation of the New York State Penal Code.

They should auction off the president and board of directors too. They
ain't worth anything but maybe the new board will do something to support
policy that will increase the integrity of the service to what it used to
be before all the dumbing down.

Thanks Todd. I look forward to hearing your moms shitty records and
8-Track tapes again. Your're monologues are hilarious too. 73, Keep up
the good work.

I'm stocking up beer for the N9OGL NAL party. Plenty of beer enemas to go
around for everyone. I hope you don't mind if K4YZ gives the beer
enema's. Steve said he wouldn't come unless he could give the enemas.
Steve is a nurse, so I'm sure he probably knows how to give someone an
enema.

Go to the hardware store and buy 50 or 60 feet of insulated copper
wire that's flexible and not to heavy. Attach it to your receiver
antenna terminal. Run it out the window and get it as high as
possible.

That'll work about as well as anything much fancier.

If you're willing to experiment and build antennas yourself, then I'd highly recommend "Joe Carr's Receiving Antenna Handook." Most (if not all) antenna books are written from the point of hams (meaning transmitting designs first). About $20 from Universal Radio.

Another antenna you should look up is the "John Doty Low Noise" antenna. Do a search of this newsgroup. Never made one but it seems very sound.

"And per 75.1150, an ID may include the channel number between the
calls and
the city of license, so it is, if done this way, part of the legal ID:"
BETWEEN???

I thought the call letters had to be followed immediately by the city
of origin for it to be a legal id. I see you are referencing FCC rules
-- so was this changed recently?? I'm a little out of the loop.
Thanks.

73.1150. My typo. It is on the FCC website, too.

You may put the channel number, frequency and / or the licensee in the
middle between the Calls and the COL.

So, "KSSS, Channel 222, Metroland Broadcasting, Anytown" is a legal ID.
"Anytown" can be followed by any other town or towns, irrespective if the
signal gets there.

"Station Identification. Stations must make identification announcements
when they sign on and off for the day. They must also make the announcements
hourly, as close to the hour as possible, at a natural programming break. TV
stations may make these announcements on- screen or by voice only. Official
station identification includes the station's call letters followed by the
community or communities specified in its license as the station's location.
Between the call letters and its community, the station may insert the name
of the licensee, the station's channel number, and/or its frequency.
However, we do not allow any other insertion.

When I owned stations in Ecuador, I was not allowed to ID one of them only by calls. I had to use a name. This is why HCJB is "The Voice of the Andes" as one example. In any case, names are more memorable than calls, which are to me an anachronistic device from the 20's and 30's.

Who says Ebay has ruined all of the good radio deals? Found a Grundig 3400 Professional shortwave receiver for 50 bucks last weekend at a hamfest... a $1000 receiver 20 years ago. Despite tons of info about it on the web, the seller didn't have a clue what he had. Works perfect and probably the most sensitive (and largest) radio I've ever owned.

The fall hamfest season is upon us. Get out there!

I must have missed the part about "only in a few key states." Any criminal would want Princeton's code for the ATMs not the voting machines. Any corruption in politics is not done electronicaly. Lets just hope that this malicious code does not make it to the ATMS that are mostly diebold. Maybe they just need to put better physical locks on them. They dont seem to have problem with the ATMs at all. Oh yeah, I forgott, its all a big Bush, right wing conspiracy. Man that Bush guy is an evil genius, oh wait he is a bumbling fool, no wait a evil genius, no wait a bumbling fool........

Can't have it both ways folks.

James Gabbert of KIOI (K-101) in San Francisco and returned to Lake
Oswego very excited. K-101 had successfully transmitted true
four-channel audio for the first time on a single FM station using
Quadraplex, a process invented by Lou Dorren. The FCC was concerned,
however, with certain technical issues that had to be resolved before
it would give Quadraplex its blessing.

You can get a cheaper one from the SarDif French shop here (119 ï¿½) :
http://www.sardif.com/store/product_info.php?cPath=8_55_134&products_id=99

If you can add 30 ï¿½ to your budget, then I would advice the 909 for 189
ï¿½ in the same shop (see link in the previous post).

I notice it says the 630 will have 'syllabic squelch'. If this means
the squelch will utilize some sort of voice recognition algorithym,
that'll be a very nice feature in my opinion.

I'm a bit suspicious to have a noise-source like a table-top PC powered
on while DX-ing. Do you have a LCD-screen or a lap-top?

> P.S. Don't forget the antenna. In order to derive maximum performance
> and pleasure, both of these receivers require the finest antenna you

I already have a (IMHO) top-notch antenna; the ARA-60 by Dressler. Since
I don't have the space to erect a long-wire etc., this active antenna is the
substitute. Very sensitive on MW.

Have you considered any of the high-end surplus military/commercial
receivers? Iï¿½ve played with the JRC-545, R-5000, etc and find them mere
toys when compared to say the Harris RF-590 series. If your looking in
the $1500 price range you can easily get a fine used $15,000-$20,000
receiver with massive IP3 and other specs. Audio on some of these rigs
is to die for, especially on AM.

I have an RX-320, and while its front end is pretty much wide-open it
does suffer from the intermod to a limited extent.

The 630 kc signal is so strong that all of the radios completely peg
their S-meters when tuned to it, and clearly their AGC range cannot
handle being tuned to 10V RMS signals :-).

> In the meantime, a BCB filter like that from PAR can help, also, a

In my case it's one specific BCB filter and a simple tuned trap ought
to do the trick. Will try rigging one up today!

Tim.

Every issue supported by the Left, and almost all of the behavior exhibited by the Left is completely antithetical to classical liberal philosophies. There is no longer a commitment to personal liberty or to freedom. The Left is far too busy to promote freedom for the common man or woman, because their time is taken up advocating freedom for tyrants who oppress the common man; terrorists who kill the common man; and religious fanatics who subjugate the common woman.
The intellectuals who once promoted the IDEA of freedom, now are ensnared in an IDEOLOGY that depends for its very existence on the silencing of speech; the suppression of ideas; and the persecution of those who dare to refute its tenets.

Patriotism and love of one's country is mocked by those who once fought to bring the American Dream to all American citizens; and who once championed those who were prevented from sharing in that Dream. Slowly and inexorably those idealists who once shouted, "we shall overcome," morphed into a toxic culture promoting a never-ending victimhood that cannot possibly be overcome. Love of American ideals and values was transformed into the most perverse and vile anti-Americanism -where all things originating or "tainted" as American are uniquely bad; and where America became the source of all evil in the world.

This is Neo-Liberalism-"Progressivism"-Socialism-Islamo-facism-Communism. A moraly bankrupt ideology blindly seeking power by highjacking the Democratic party. The party whose foundation was overwhelmingly christian, family oriented, bluecollar hard working Union members whose slogan was, "America: Love it of Leave it".

Scandalous Democrats embrace corruption

Investors reports on how the Democrats embrace corruption.
http://www.investors.com/editorial/editorialcontent.asp?secid=1501&status=article&id=245890694091422

Sen. Edward Kennedy, D-Mass., said of this man censured by his colleagues from both parties in 1983 for having sex with an underage congressional male page:

"Gerry's leadership changed Massachusetts forever and we'll never forget him."

Sen. John Kerry, D-Mass., called Studds, 69, "a committed environmentalist who worked hard to demonstrate that the cause of working people and the cause of the environment go hand in hand with the right leadership."

Democrat Senator Studds was a pedophile and the Democrats call him a leader!

Doing whatever you want, and getting away with it, seems to be the liberal Democrat mantra. An FBI affidavit says that Rep. William Jefferson accepted a $100,000 bribe last year that he was apparently going to use to pay off a high-ranking Nigerian government official, with $90,000 of the cash found hidden in his freezer at home. Louisiana's state Democratic party committee

? no stranger to corruption

? even voted on Saturday to deny Jefferson its endorsement for re-election.

Yet he remains a member of Congress, with no Democratic leader calling for his expulsion, or even for disciplinary action.

Clinton had oral sex with a young intern that he preyed on and the Democrats couldn't care less.

The same media neglect involves Rep. Alan Mollohan, D-W.Va. He is being investigated by the FBI regarding nonprofit groups he allegedly help set up with $150 million in pork-barrel spending and business relationships with the administrators of the organizations.

And the granddaddy of them all? Senate Democratic Leader Harry Reid's Las Vegas land deal with a longtime friend, a casino lawyer with mob connections, landed him $1.1 million. Now that it's been revealed that Reid apparently violated Senate rules by not mentioning the deal in his Senate financial disclosure documents, he's entered into discussions with the Senate Ethics Committee. So where are the media big guns? If this were the Senate Republican leader, Bill Frist of Tennessee, they would be screaming.

And now Reid's been caught in yet more financial wrongdoing. The Democrats continue to commit corruption because they know the left wing media will give scant coverage to it will over blowing anything the Republicans do.

Democrat Harry Reid in new scandal
Reid caught in another financial scandal.

Senate Democratic leader Harry Reid has been using campaign donations instead of his personal money to pay Christmas bonuses for the support staff at the Ritz-Carlton where he lives in an upscale condominium. Federal election law bars candidates from converting political donations for personal use.

How greedy can you get? This latest Reid financial scandal comes on the heels of this one.

Reid also announced he was amending his ethics reports to Congress to more fully account for a Las Vegas land deal, highlighted in an AP story last week, that allowed him to collect $1.1 million in 2004 for property he hadn't personally owned in three years.

In that matter, the senator hadn't disclosed to Congress that he first sold land to a friend's limited liability company back in 2001 and took an ownership stake in the company. He collected the seven-figure payout when the company sold the land again in 2004 to others.

Reid portrayed the 2004 sale as a personal sale of land, making no mention of the company's ownership or its role in the sale.

Time for Mr. Ethics to step down.

Hillary Clinton admits to lying - Finally.

For more than a decade, one piece of Senator Hillary Rodham Clinton's informal biography has been that she was named for Sir Edmund Hillary, the conqueror of Mount Everest. The story was even recounted in Bill Clinton's autobiography.[...]

"It had two l's, which is how she thought she was supposed to spell Hillary," Mrs. Clinton said at the time, after meeting Sir Edmund. "So when I was born, she called me Hillary, and she always told me it's because of Sir Edmund Hillary."

There's just one small problem. It's easy to prove it's a lie.

But one big hole has been poked in the story over the years, both in cyberspace and elsewhere: Sir Edmund became famous only after climbing Everest in 1953. Mrs. Clinton, as it happens, was born in 1947.

Her story now?

But yesterday, Mrs. Clinton's campaign said she was not named for Sir Edmund after all.

"It was a sweet family story her mother shared to inspire greatness in her daughter, to great results I might add," said Jennifer Hanley, a spokeswoman

for the campaign.

So why lie about it for over 50 years? Because she is a psychopath.

4666. New JRC 630 Price !!

Hi,

Sent an e-mail to the folks in the UK that are apparently handling this radio.

Wow !!! 7,000 Pounds is about $ 13,000 US

Think I'll be keeping my 545, unless I can convince the wife to get me the 630 rather than

a shirt for XMAS. Frankly, I kinda doubt it.

I get the feeling that the radio is being oriented (mainly) for the Marine Community, but not sure if I am interpreting this right ?

Bob

The JRC will be in the order of ?7000

If you want more details please let me know

Most likely it is aimed at the commercial market (Marine, Govt., etc.) One wonders if they will have a new offering in the 500 series incorporating some (or all) of the technology that is in the NRD-630. Something like a NRD-555 with a bit more pedestrian price.

I have a modern Casio Keyboard that can play many different pipe organ sounds.

The Casio Keyboard has build in reflex speakers. Knowing how real pipe organs works, I was amazed on all of the different parts those speakers were able to produce at the same time. With depth and separation.

It's almost like a 3D audio experience. -If you will!

We had this crude technology for a very long time. Considering the history of the organ pipes. The human ear had always been conscience of the direction of sound.

But unfortunately, I think that many recording studio were either very expensive to record or not equipped with this type of equipment when Quadraphonic came out.

Most of pop/rock/rock&roll is usually a piece of music that is usually less then 4 min long and most of the instruments are playing at the same time. So a Quadraphonic recording of that might not have much of an effect.

Whereas, with Jazz or Classical music, the pieces are much longer. The different musical instruments will have individual parts to play and the many different combinations. Music of these types would be far better for Quadraphonic recording.

I guess if Quadraphonic technology came out 50 years earlier, it might of caught on better during the swing/bebop era.

Funny that 3D photography is about 100 year old if not more!

Dear Gisle,

I use an "ancient" (purchased in 2000!) Windows 98 laptop - a Toshiba Satellite 2180CDT - which is really no longer suitable for internet use. I "wiped" it, reinstalled Windows 98, and use it only for a few programs, one of which is "RxWings." The computer is next to my sofa within easy reach and the radio itself is across the rather small room, about eight feet away. The two are connected by a cable. Both are plugged into the same APC UPS and I have a C. Crane surge protector which also reduces EMI ahead of just the radio. (My Wellbrook ALA 330S is also plugged into that same APC UPS.) I just sit back in my sofa and control the radio from there.

If you do not own a laptop, and you would prefer to use one with your radio, you could probably buy a used or refurbished one very cheap - I've seen them advertised sometimes for less than $150.00. You need nothing elaborate; I think even an old Windows 95 machine would work. Just make sure you totally wipe the drive first - with something like "Darik's Boot and Nuke" - and then reinstall the Windows OS. You'll have a "clean" computer which will work very well with 'RxWings" or any other computer-control program you care to try. (By the way, do NOT buy AOR's "DataMaster" program: it is grossly overpriced and obsolete. Take my word for it - I DID buy it. Live and learn.)

I have never had any problem with any noise whatsoever caused by the computer. (The electrical noise caused by neighbors and transformers/streetlights, etc. on my property - I live in a small townhouse community - are something else, but the Wellbrook has taken care of that!) Of course I do not know what might happen were I to place the computer right next to the radio but, fortunately, I have no need to do so.

All the best,

Joe

Ideas is on at 0006 GMT on Atlantic and NF CBC stations, 0106 Eastern, 0206 CDT, 0306 CST/MDT and 0406 PDT.

http://www.cbc.ca/listen/# for Windows Media Player feeds

Toronto Globe & Mail obit:

http://www.theglobeandmail.com/servlet/story/Deaths.20061017.93067802/BDAStory/BDA/
SINCLAIR, Lister, O.C., B.A., M.A., LL.D., D.Litt., Litt.D. died Monday, October 16, 2006 at St. Michael's Hospital in Toronto, Canada. Survived by two sons, Andrew and Peter (Philippa), and grandchildren Chris and Sally Sinclair. Lovingly remembered by Gloria Saarinen, his professional and life-partner of more than twenty years, and by dearest friend Nonnie Elkins. Lister Sinclair was one of public broadcasting's foremost figures for more than half a century. He educated, enlightened and entertained generations of Canadians with his expertise in subjects as diverse as mathematics, astronomy, music, nature, history, drama and sports. A modern Renaissance man, Lister Sinclair began his long association with the CBC in 1944 by writing radio plays while he was a lecturer in mathematics. Over the years, during what many consider to be the Golden Age of radio, he wrote and adapted more than 400 plays, many for Andrew Allen's ''Stage'' series. In the fifties, his play ''Hilda Morgan'' created an uproar in Parliament because it dealt with unmentionable subjects: the heroine was pregnant, unmarried and was considering ''doing something about it'' in the euphemism of the times. But radio drama was only the beginning. He was a radio actor, panelist, critic, commentator, musicologist, producer, director, program host and CBC executive vice-president. He was involved with such important television series as ''Man At the Centre'', ''The Nature of Things'' and ''Horizon''. He was perhaps best known to contemporary listeners for his sixteen years as host of the CBC Radio program IDEAS. In a career spanning most of the history of the CBC, he brought to every new venture erudition, wit, grace and a passionate delight in learning that reminds us all what public broadcasting at its best can be. For all his achievements, Lister Sinclair thought of himself simply as a teacher. He drew on an encyclopaedic knowledge gathered while satisfying his insatiable curiosity about everything under the sun ... and beyond. In a question and answer session with IDEAS listeners the following exchanges took place. Question: In your youth, what were your goals? What was your inspiration and have you accomplished what you truly wished? Lister Sinclair: My goal and inspiration from a very early age was the thrill of finding out stuff. And then making connections. This affliction has become much more severe as the years go by. Question: Can mankind survive the coming environmental crisis? Lister Sinclair: Maybe. But

every form of life on earth and no doubt elsewhere is due to become extinct. Speaking personally, when I look out of the window, even on a grungy day, I think I made a very wise decision to choose this planet to die on. A public memorial will be held in November 2006.<

[snip]

Isn't Woger eligible for one of those awards? He's over on N9OGL's web site yelling that he wasn't beaten up by skinheads last week, and I think that ought to at least earn him an honorable mention. N9OGL had no clue about what Woger meant, because there was no previous mention of skinheads anywhere on Todd's web site. That didn't stop Woger from telling Todd off about the skinheads anyway.

That's real kookism. That's definitely award material.

I am reading the specifications in pdf of each of them and hesitate.
If don't know if there is more sensitivity for the 909 model. There are
no advanced technical specifications.Sardif does not provide the ant-60
nor the adapter.

Has anyone already bought anything for Germany, THIECOM for instance ?
In fact, it is not so easy to find a reliable reseller.

Really ?????? I thought it was ALWAYS included in the box. Perhaps this
is why it is not explicitely written ? Did you call them or email them ?
(I got a reply within a few days after an email).

I see on the 909 Sardif web page :

"Alimentation piles et secteur."
(Battery and AC powered)

"Livrï¿½ avec antenne ondes courtes et housse de protection."
(Delivered with short-wave antenna and carrying pouch)

So I suspect it is included... I just used the "Contact Us" web page of
their site to ask the question. We will see...

>
> Has anyone already bought anything for Germany, THIECOM for instance ?
> In fact, it is not so easy to find a reliable reseller.

Not me.... Got mine from Darty five years ago, and the Sony was bought
used via eBay.

I just check with them today : both the AC adapter and the ANT-60
antenna are included in the box.

You gotta wonder, with the accelerating vacation of HF by
broadcasters, the stagnation in the development of DRM, the ongoing war
on the radio hobby by HOA's and local government, and the gathering
threat of BPL making some spectra difficult if not impossible to use,
just who is this rig targeting?

And for the kind of money asked for premium rigs by Ten-Tec, ICOM, AOR
and now JRC, what do they know that we don't? What's coming?

On the other hand, it's nice to know that someone is still interested
in building a receiver based on performance, rather than buzzword features.

If you can get these questions off the top of your head, you are fully qualified to jump in anytime to discuss Canadian affairs.

(1) What US city is north of its nearby Canadian city.

(2) There are three pieces of US territory that you have to drive through Canada to get to.
What and where are they?

(3) Cuba nationalized US holdings with the revolution of the 60's. Recently, some Canadian firms took over some of these proerties to do business. The US started a lawsuit demanding compensation for the expropriated properties. Then they dropped the lawsuit. Why did they do this?

Pretty good except for some in the Maritimes and north. Answers later.
Not only can I name all the States, but I have been in every one. The
last was Arkansas, in 1970, which you don't seem to cross on the way
to anywhere. I don't know all the Capitols, though. Jefferson City
comes to mind, but I don't recall which state.
There is the old gag about the US tourist getting off a train asking
where he was. "Saskatoon, Saskatchewan" was the reply. " My God,
Mabel," he exclaimed, "They don't even speak English in Canada."

Detroit,I think,from Detroit,you have to drive South to get to Canada.But I have always known that.There is or was a U.S.Railroad outfit and the Train had to pass through part of Canada along it's U.S.route.

Batista FLEES! (www.devilfinder.com bush Paraguay) (Will the bush Crime family FLEE! to Paraguay just like his Nazi buddys FLED to Paraguay and Argentina and whichever other South American Countries they FLED to,World War Two era? Lets us all start hollering IMPEACH bush!!!! loud enough and long enough and maybe those bush CRIMINALS will FLEE! to Paraguy) Of course I read about Cuba Nationallizing U.S.thingys back in the 1950's and 1960's.

Have you considered the SDR-1000?

http://www.flex-radio.com/About.aspx

LSB, USB, AM, FMN, Sync AM, CW, and DRM are supported.

Receive 12KHz-60MHz
(Requires external user supplied pre selector for best operation below 160M)
see:
http://sdr-1000.blogspot.com/2006/09/sdr-1000-longwave-dx-with-w1vlf-low.html
http://sdr-1000.blogspot.com/2006/10/close-up-relay-switched-enclosure-for.html

"This radio currently features receiver specs that out perform all three of
the top "mega-priced" radios by Ten-Tec, Icom, and Yaseu."

"3rd and 4th order harmonics are so much better than any other radio
currently on the market."

"+30 dBm IP3"
"98 dB IMD DR3 @ 2 KHz"
http://www.eham.net/reviews/detail/4108

Full Manufacturer Specifications Here:

Guy needs to chime in on this one.....I think the flex only does
that good on IP3 if used with the "approved" sound card ????

No big deal as I don't think that sound card is very expensive.

Those are REALLY good spec's for 1.8 mhz & above

I have heard several amateur radio op's using the SDR-1000 & they seem
to like them. Not sure if it is due to the receiver or the "HIFI" wide
band width SSB transmit. I know those op's running that bassy audio
think they sound good & do when they are 20 over but try to understand
what they are saying when they are in a pileup or just a little above
the noise level.

I for one just do not like using a receiver from a computer interface.
I have tried about all of the programs with several receivers & it
just takes the thrill factor of tuning a radio out for me. Many do like
software control & if you do.... have at it.

Personally, I have no interest in a 'radio' that requires a computer to operate.

But, here is a recent bit some might be interested in:

Winradio G313-E

I've been using the WiNRADiO 313E exclusively for DXing for the past
year, plus. I love the radio and cannot imagine ever returning to a
non-SDR receiver. Some of the main advantages of the WiNRADiO and its
Flex Radio SDR-1000 competitor are probably only applicable to people
DXing International MW and SW --- The Spectrum Scope, for instance,
allows you to focus in from 20 kHz wide (max) to 2 kHz wide at total
zoom-in. When you are working with close-together signals (say two or
three kHz apart, there is nothing like seeing the signals and then
graphically dragging the filter envelope and center-of-tuning to fit
them precisely between the QRM to achieve the maximum recoverable
audio.

The other thing that the Scope does is afford the user "situational awareness" to a degree that is just unreachable without a scope. Since you can see what you are trying to hear, in great detail, and you can see the immediate surrounding signals, too, you immediately know what adjustments need to be made to the receiver. It`s not that you can't figure out what needs to be done --- bandwidth, mode, slot filter, etc., in the traditional fashion --- its just so much easier and faster to do it when you have graphical as well as the traditional auditory input. This latter "situational awareness" aspect is something that would benefit Domestic DXers, as well.

Another situational awareness attribute of the 313E that I really love is the specific way that alpha-numeric notes can be displayed, after they are associated with a particular memory and frequency. For some years, there have been a few receivers on the market that allowed you to store a title or some form of notes with each memory channel. That way, WHEN YOU LOOKED AT THE MEMORY CHANNELS, there would be a title like "Mem 1 BBC Evenings 5975 USB" or "Mem 2 R Australia 9580 AM." Well, the 313E does that, too, but in addition, it allows you to associate a comment with each memory. Further and very importantly, it displays that comment just beneath the Frequency Display on the radio, WHENEVER the receiver is tuned (by any means) to that frequency, whether you are in memory mode or not. So, when I have my "Asian MW" memory file loaded, every time I tune past 891, the comment appears just beneath the Frequency numbers on the radio WATCH FOR THAILAND LATE. When I go to Grayland this weekend, when I pass 738, the radio is going to remind me: RECORD PROBABLE JILIN PBS, etc., etc. This ability should be of assistance to domestic DXers, too. Having reminders come up every time you pass certain frequencies is a boon to this 65 year-old DXer, let me tell you!

Two other special favorites and then I'll quit:

The synchronous detector is the best that I've ever used. In fact, though I've owned most of the receivers with a sync detector, this is the first that I've used as my primary DXing mode. Two reasons --- first, by being synced on the carrier of choice, it actually suppresses some sideband splatter and hash from adjacent signals (wow!) further, even with signals out in the open, it seems to improve signal-to-noise or intelligibility of weak signals. In my Okie terms, "It hears better!"

Lastly, an attribute of most serious DSP receivers --- virtually vertical sidewalls on the IF envelope. With any analog IF filters, even the vaunted Collins mechanical filters, the actual window that you are receiving the signal through is shaped like a truncated equilateral triangle. Where your main DXing filter may be 2.7 kHz wide at 3 dB down, it may be 15 or more wide at 30 dB down. The result of that is that you use narrower filters that you really want to, to conquer adjacent channel QRM --- AND since you have to use a wide enough filter to let intelligible audio in, you also allow loud adjacent splatter, etc. in "under the filter skirts."

With a total DSP package, from demodulation on down, the IF filtering, of course, is done in the software. Hence, filter skirts that are pretty-much VERTICAL. In my case, I can use say a 4 kHz wide virtual filter rather than a 2.8 physical filter in the same conditions. Since my 4 kHz filter lets in much more of the audio of my DX target (than does a 2.8) I hear more intelligible audio. This would be true, all things being equal, of any set that used virtual IF filters, not just the Black Box receivers like the 313. Purists will argue that other problems in the digital realm degrade this advantage, and to a degree, they are likely correct. However, I can still keep my filters open wider with this radio than with any of the excellent analog sets that I've owned.

So, while the 313 black box won't be to everyone's taste, it lets me hear more stations, better and easier than any set I've ever had before. I may someday buy another main DXing set, but I'll guarantee you that it will be a software-defined receiver.

P.S. I started MW DXing in the winter of 1953-54 and I love to use classic tube communications gear. I especially love sitting and staring at it while I listen and MOST OF ALL, I love tuning a really well weighted, gear driven tuning knob. For years, I owned a mint 1942 SX-28A. Tuning that set was almost a sexual experience. I sold the SX-28A to help me afford a totally rebuilt SP-600 --- turning that counter-weighted knob and those beautiful brass gears WAS orgasmic. I love DXing with those sets, and I was so sure that I'd miss a tuning knob on the 313E that I invested in an outboard accessory tuning knob (USB connected) that I used for about three evenings. I can just hear more stuff more easily with this cold little box; and, in the final analysis, my hobby is hearing DX and getting QSLs, not turning knobs, counter-weighted or otherwise, JHB (John Bryant, WA, IRCA via DXLD 6-153)

The SDR has IMHO two problems. One is that it requires a PC to work and the other is that you have to operate it via a PC.

If you like the ergonomics of a PC controled radio and have a PC next to the radio then it's fine. I sit too long in front of a PC, when I use a radio, I want a box with knobs, dials, switches, etc.

Geoff.

;-)

The Top 10 Reasons not to buy a FlexRadio SDR-1000

10. You have a knob, button and switch fetish.

9. The excitement of owning a radio that constantly gets better might cause
you to have a heart attack.

8. You don't need a radio that can double as a narrow band spectrum
analyzer with the best performance figures ever seen in this price class.

7. You don't need the kind of continuously variable, ring free, brick wall
filters, and noise reduction available with digital signal processing.

6. You have no desire for a needlepoint accurate near real time spectrum
display, that easily displays the weakest of signals among the strong.

5. You prefer a radio that requires costly accessories such as roofing
filters and preselectors, rather than buying a radio that is complete and
reaches its design specification at no extra cost.

4. You don't want a radio with the best sounding receiver and transmitter
available at any price.

3. You don't need the most responsive support network available anywhere.

2. You don't want to turn all your other radios into boat anchors.

And, the number 1 reason...

1. You can't handle any more fun in your life!

:-))

Yeah, I know. Guess I'm happy with what I currently operate, and have had at least moderate success with same.

OH BOY - OH BOY - OH BOY!!!!

Does this mean that we will get to hear those great
recorded audio tapes of Lloyd, Woger and Mularkie Makkie
in the HOT TUB together on GREEK NIGHT FRIDAY NIGHTS ????

You know! The one where you three and Bertha Bazooms and Sheena Silky
(two 300 pould black wimmen who used to hang out at Brother Stair's
farm)
all get together and perform acts of PRE-VERSION on each other? I don't
know
about you...but I just LOVE IT when Lloyd hows like a COON DOG that
just
tree'd a racoon in the heat of climax while Bertha works her 19" long
green
day-glow STRAP-ON JELLY SEX TOY up inside his PUCKERED STARFISH !!!!!!

Man oh man it sounds like the coon dogs runnin on a scent in the
mississippi backwaters.

Maybe I missed something,let me look in my Rand McNally Road Atlas which I bought at a Wal Mart store in 2001.(it has the year/date on the front cover.When doggy was a puppy,she ate the Oregon map out of my old Rand McNally Road Atlas) Alberta.British Columbia.Manitoba.New Brunswick.New Foundland.Northwest Territories.Nova Scotia.Nunavut.Ontario.Prince Edward Island.Quebec.Saskatchewan.Yukon Territory.

That's what it says on page 136.On pages 119 through 127,it says,British Columbia.Alberta.Saskatchewan.Manitoba.Ontario.Quebec.New Brunswick.Newfoundland.Nova Scotia.Prince Edward Island.

I Know for certain I haven't missed this though.Screw!!! them un nato sanctions!!!! Why aren't Real Canadians Joining our U.S.Military and helping America fight terrorism all over the World?

In World War Two,there were many Americans who went to Canada to Join Up because they couldn't Join the U.S.Military for whatever reasons.

4764. Smart AC mains KWH meter equals RFI hell

Newsgroup: rec.radio.shortwave
Date: 2006-10-18 23:08:07 UTC
From: r2000swler@hotmail.com
Message-ID: <1161212887.592487.88380@b28g2000cwb.googlegroups.com>
Source record: 94940

Anyone else in the group have any experience with the new "smart" KWH meters being deployed
by many utilities?

We we arrived home after a fun filled visit to the family MD, I found a hang tag on the door that
said RECC had replaced out meter with anew, udated, smart meter that allowed for remoted
measurement of our eletric usage.

No big deal except this is the RFI jammer from hell.

Itut makes a firedrake jammer nice by comparison.

>From below 100KHz to above 30MHz a low level, just below S1, hash wipes out all weak signals.
Too late today to call and complain, but I thought everyone might want a heads up on this. Just
whne it looked with BPL is dead hear abouts, here comes a new RFI source from left field.

The only good thing is that I am an extra class so I could see what 1KW AM does to it.

It is a:
Focus KWH
Type ALF
Form 2S CL200

I don't know if I am receiving mine, or the collective RF from all the meters in the area.
All three of my prirmary antennas have about the same noise level.

I just aquired a Tek 7613 and a Tek 7704A frames with a 7L12 spectrum analyzer.
If they had only waited another week I would have completed a noise audit on all three of
my antennas.

Terry

Only S1? Not to belittle you or anything, but I suffer with a solid S-9 (or higher) from 100 KHz through about 15 MHz, and it drops off slowly from there. That's just an almost white-noise-like impulse noise, presumably it's pretty much everywhere in town, due to the ungrounded electrical system used here... makes DX nearly impossible. Going to try a shielded loop as soon as I can build one..

> (1) What US city is north of its nearby Canadian city. Detroit is north of Windsor
>
> (2) There are three pieces of US territory that you have to drive
> through Canada to get to. What and where are they?

(a) Alaska The Alaska highway runs through Alberta, British
Columbia and the Yukon

(b) Point Roberts, Washington. Point Roberts is on a peninsula that
is cut off from the rest of Washington by Boundary Bay. To get there,
you drive north from Blaine, Washington, crossing the border into
Canada. Then you drive west about 30 miles through British Columbia
just south of Vancouver and reenter the US. School buses make this
trip twice every schoolday

(c) The Northwest Angle, Minnesota. This is a large penninsula that
sticks out into Lake of the Woods, Ontario. You have to leave the US
and drive through Manitoba to get there. You drive north from Warroad,
Minn. , cross the border, and then drive about 50 miles to reenter the
US. The Northwest Angle is mostly Red Lake Indian Reserve, but there
are cottages and camps along the shoreline.

(3) Cuba nationalized US holdings with the revolution of the 60's.
> Recently, some Canadian firms took over some of these properties to do
> business. The US started a lawsuit demanding compensation for the
> expropriated properties. Then they dropped the lawsuit. Why did they do
> this?

In the peace treaty of 1783, the US agreed to pay compensation to
the displaced Loyalists for their properties that had been seized by
the Revolutionaries. The US never paid and the claims are still in
effect. The US had just got started on the lawsuit on the Canadian
firms demanding compensation for the lost US properties in Cuba when
they realized that the suit would open the old Loyalist claims promised
in 1783. The 200-year old claims, with interest, would be immense and
would bankrupt the country. The Loyalists, fleeing for their lives,
settled in Upper Canada (now Ontario), and changed Canada which had
only been British since 1763 with the defeat of the French.

I gave this test to a recent immigrant to Canada (from the US) and
he got 2 out of 5 on the Phd test so I guess that would be a pass. He
got about half of the BA (buggar all) questions so I guess 4 would be
a pass.

Most everywhere in the World is potentional Geo-Thermal,including the Oceans.In World War Two in Europe,some people did run their vehicles on gas created from burning wood chips.I have an old Mother Earth News magazine floatin around here somewhere which has an article about how to run a vehicle on wood chips and another Mother Earth Magazine with an article about running vehicles on methane gas.

How about this one? www.devilfinder.com Minto Wheel
I have an old Popular Mechanics magazine here which dates back to the 1970's about the Minto Wheel.Another magazine I have here,Mechanix Illustrated which dates back to the 1950's.An Army Sergeant got a Chevrolet pickup truck running on Ammonia gas.

Sheeeit. That sucks. This group is a great resource- I often search the archives as there is a lot of useful information compiled over the years (with a fair amount of stupid shit too). That sucks like a whore for crack $$ that they're gonna close the group... I sure hope they keep the searchable archive. -Justin

Is this supposed to supersede the NRD-545?

I wonder why has less channels (300 vs 1000) and less bandwidths etc?

Don't forgot that US Military will be destroying the ionosphere very
shortly with it's Ionospheric Remediation program. The rest of the world
doesn't seem to think that the Ionosphere NEEDS remediation.

Will arrogance win out to the detriment of shortwave?

These don't come up for sale very often, and now there are two currently up for auction in the same week. I wonder how much the ending prices will be affected by bidders having a choice (though one seller is in Norway adding extra shipping charges to the winning bid, which might make a difference).

As a CW lover, I like to listen to this station. However, picking it up from 3.5815 is a bit of a challenge at times. With the fading in & out make it ever worse.

I am not sure how to zero beat with the ICOM R75. (Not using a PC connection).

Picking it up from 147.555 is totally impossible. I hear nothing. Why couldn't they use repeaters on 2m?

73, Steven!

My KWH meter was upgraded to a digital remote reading model
Schlumberger-'Centron' about two years ago. Since then I've suspected

that some of the noise sources on HF might be coming from the meter. I'm tempted to temporarily remove the meter and jumper the contacts in the box to see if the noise goes away. I wonder if the power company would let me have the old style mechanical meter back if I could prove that the new one is an RF noise maker?

About - John Batchelor
http://en.wikipedia.org/wiki/John_Batchelor
On Monday, August 25, 2006, John Batchelor announced on air that his last show on ABC Radio Network would be on Friday, September 1, and that the show would go into hiatus for a few months, returning under an unstated relationship with the Hoover Institute.

Starting Monday, September 4, 2006, The John Batchelor Show will be on hiatus until further notice, to return probably in late fall of 2006.

Hi from Ken in the UK,

Anyone interested in an "AOR-3030" complete with VHF converter and 'as-new'
condition, my friend has one for sale (price-£250.00).
He has no internet, hence a direct sale only.
Inspect and collect or courier for anyone interested.
Please contact me direct if interested and I will pass-on to my friend,
cheers, Ken, G4KIR.

Hi from Ken in the UK,

I think the filters mentioned in the 'Universal Radio' spec may apply to
fixed frequency roofing filters, not 2nd and third IF filtering that will be
taken care of by the 32 Bit DSP Circuits.
I am sure there will be more than enough to choose from going on DSP
equipment currently available in the market place at the moment......cheers
Mark, all, Ken, G4KIR.

Given that I have spent considerable time and energy reducing the QRN
and
trying to build the quitest atenna system possible, then to have this
(these)
unexpected RFI sources if frustrating and more then a little
irratating.

At S9 your location beats a friend who lives in a downtown condo. You
are in
RF hell.

I found and downloaded the service manual for the meter and it has the
standard FCC
part 15 notice. Shall not cause harmful RFI. I suspect my call to the
RECC people
will not go well.

4830. OT: ADI AR-146 Help/ Info

Newsgroup: rec.radio.shortwave
Date: 2006-10-19 11:04:29 UTC
From: Catweazel <francis.fuller@iee.org>
Message-ID: <1161255869.812234.46610@m73g2000cwd.googlegroups.com>
Source record: 94956

A couple of days ago I retrieved my ADI AR-146 from the attic to try it out.
Now, since purchasing this radio back in 1996, when the local 2m repeaters all used 1750Hz tone-burst access, I never had anything against which to try out the [transmit] CTCSS facility.

Imagine my disappointment then, having set up the CTCSS tone to check access to some of the local repeaters, there was no access [my other radio does this fine].
I've looked in the handbook & around some forums to see if the problem lay with the absence of the optional CTCSS module - and it appears that this radio does *not* need this optional CTCSS module to transmit the sub-audio tone.

Would any users/ ex-users confirm
1] The Optional CTCSS module *is* only required for tone-squelch
2] That there is no other action to be taken to initiate CTCSS on transmit other than to follow the instructions in the handbook.

TIA

4831. Future of CHU 7335 kHz in doubt

Newsgroup: rec.radio.shortwave
Date: 2006-10-19 11:23:03 UTC
From: The Poet <tcsshortwave@yahoo.com>
Message-ID: <1161256983.085044.154470@h48g2000cwc.googlegroups.com>
Source record: 94957

(Email from CHU):

About the New Messages on CHU - October, 2006

The added messages on CHU are:

"On April 1, 2007, CHU needs to stop operating, change frequencies,
or re-licence. Contact
radio.chu@nrc.gc.ca or mail CHU Canada K1A 0R6," and

« En avril 2007, CHU doit soit cesser ses opérations, soit changer de
fréquence, soit renouveler sa licence. Contactez radio@chu.cnrc.gc.ca
ou écrivez à CHU Canada, Conseil national de recherches, K1A 0R6. »

This outreach is to collect information from users of CHU to help shape
recommendations concerning what should be done concerning changes to
CHU that will have to be in place by April 2007.

In April 2007 the licence on 7.335 MHz will have to be modified to
reflect changes on the status of the band allocation by the
International Telecommunications Union. This frequency has been changed
from "fixed service" to "broadcast". (The ITU decision does not
affect the frequencies 3.33 MHz and 14.67 MHz.) Some alternatives are:

Re-licencing just might be possible, calling the 7.335 MHz a
"broadcast".
It is also possible to stop using that frequency (the most useful of
the three we use). Stopping one signal is the easiest solution but
could create problems for some clients who are counting on this
particular signal.
Change the frequency from 7.335 MHz to a nearby fixed-service
frequency. It would need some investment from our part in new hardware
and in manpower. It could also create problems for clients, and likely
not all radios will be able to tune to the new frequency.

To be seriously considered, any of the above alternatives will need to
have a zero-based budgeting justification prepared, comparing it
against the least expensive alternative of closing CHU entirely. CHU is
entering a phase where major investment in new transmitters will be
required if it is to be kept operating. In the absence of input from
the CHU user community, concerning the importance of CHU's
contribution in the modern world, this last option is an inescapable
recommendation.

The CHU code is also used as a radio clock, which can be used as a
reference clock for an NTP time server. Software drivers have been
written that can obtain the date and time from the code and that tune a

digitally tuned radio to one of our 3 frequencies, to get the best signal. Users of this service generally don't listen to the audio broadcast. So we cannot gauge the usage by sending this announcement.

Please, if you know of anyone using CHU but not aware of the possible changes to its frequency usage, let them know and ask them to contact us. Also if you have an important use for CHU signals, please tell us how you use our signals.

Be assured that we will try our best to maintain the CHU service as it is, keeping the three frequencies as they are.

Thank you for your support.

The 'supplied bandwidths' mentioned by Universal certainly don't look like
roofing filters but merely your run of the mill standard voice and CW filters,
6, 3, 2.7, 1, 0.5 and 0.3 kHz.

I'm not sure why WYFR 5985 was not blocking Burma on Monday morning at 1230. Perhaps they were off early, since they are sked on the freq. to 1245. At any rate, after 1245 is a good time to look for Radio Myanma on 5985.7.

Audible here this morning at 1245, though seemingly drifted up to 5985.8, and certainly not coming in as well as on Monday.

I've had miy 1103 for about 8 months. Bought it used for $35.

I use it daily. AM broadcast, shortwave listening & monitoring the ham bands.

Very sensitive with the whip, longwire will overload it if your anywhere near a broadcast station. I was on 75 SSB this morning using my ricebox & a fullsize 75 meter dipole. I switched on the 1103 with just the whip & copied everybody in the QSO nearly as well as with the ricebox & dipole.

There may be better small portables out there but none better at the price.

Douche Bag who wrote the first thread describes himself as a 'Control Freak'.
As far as I can see this thread title is simply a "come-on" and is a load of nonsense.
Does Google have a Manager for this site? I expect so, but I doubt whether Douche Bag is the person. Come November 1st I am sure that the site will still be here and that the net and this site have a good role for radio enthusiasts of all sorts.
Incidentally, with the exception of the USA the date given does not occur on any other countries' calendar - if Douche Bag intended using a site devoted to a global audience
then he should have either written 31st October which would cover all of us or more
correctly he ought to have written 31/10/06 which is a real calendar date across the globe.

Take a look at the reviews on Radiointel.com. Both radios have notable operational quirks, but they do the basic job of receiving stations very well. I like the tuning knob of the DE1103 more than the buttons of the DE1102.

I've had a new meter installed here in the last couple of years, brand on it seems to be 'Icon' or 'Sensus'. Also had a new box installed which apparently sends the signal out and it appears to be of the 'Star' brand by Hexagram, Inc.

I had installation held up until I could figure out if it would pose an RF problem. Seems as though it broadcasts in the VHF/UHF range at least once a day. I did have the freq. written down, but can't find it.

Bottom line here is that it has caused no problems at all RF wise, elsewise I probably would have had them yank it.

I never mess around with the electric and water and gas meters here.I had a water pipe leak earlier this year and I turned the water off at the meter so I could repair the leak.As far as I know,all of my meters are the good old fashioned kinds of meters and I hope they stay that way too.
It's raining cats and dogs here.Good thing my roof top and yard aren't meterized.

My ham catalogs show a good amount of HF marine gear; I'd imagine
ships at sea would want this kind of radio, as well as shoreline
monitoring stations.

Not to mention spying operations, eavesdropping on n'ar-do-wells using
easily obtainable ham-type transceivers.

I have never been to New York before,haven't even been to New England before,there are millions of places in America I haven't been to.But if I was from New York, (I Love New York) I much rather be a New Yorker than a Canadian.

Story of the Day 1 www.standeyo.com
The article also mentions Canada.

But back to New York.Back in the 1960's around 1969,I worked part time at the Krystal restaurant (fast food joint) on Terry Road here in beautifull Jackson.There was a gal there about 19 or 20 years old and she said she was from Hornell,New York.She pronounced box as bax and boxes as baxes.One time a cat went passing by the restaurant and she said,,,,,,,, (I wont tell y'all what she said)

Hi.
No news about the promised high-class DE1108, but it seems like our
Chinese friends in Shenzhen have come up with a new model DE1121
including MP3. Not to be seen yet on either of the usual EBay stores -
though one of them has already added the DE1121 to the list of the
radios that fit into one of the vinyl cases he sells !
Let the first one who gets his hand on one let us know how it's doing !

Hi Jacques.

Do you know if there is a Yahoo Group for the DE1121 yet?

I'm really interested in that radio too, but won't get one until I've
heard other users' opinions.

Sometimes it's not the subject so much, but the one who enters the post.

Radio is such a diverse subject, it is very hard to have a newgroup for
every possible radio subject.

Even shortwave as a subject is also very diverse. It can go from crank
radios to boatanchors to satellites.

Shortwave is the mother of all radios.

Paul Harvey (GI Joe Not !)
http://www.arikah.net/encyclopedia/Paul_Harvey
According to his official Army Air Corps Military Personnel Record, his
term in the military lasted from December 1943 to March 1944 - about 14
weeks. (The November 7, 1978, issue of Esquire magazine has an exposé
of sorts on Harvey, including how he came to drop his last name of
Aurandt: briefly, he stole an airplane and was discharged from the Army
Air Corps on Section 8, mental illness charges.)

Plus . . . caught on the barb-wire . . . infiltrating the Argonne
National Laboratory.
http://www.arikah.net/encyclopedia/Paul_Harvey
Naturally after they hear "The Rest Of The Story"
a Grand Jury cleared him of all charges :o)

The only reason to zero beat is to try to stay on the same frequency as the station you're going to transmit to. You are just receiving. So you don't want to zero beat because you wont hear the CW. Try tuning into w1aw on 40 or 20.

You won't hear it on the 2m frequency unless you're in the newington CT area.

Steve:
I have often heard complaints about NRD audio, especially for the 525. But I have the 535D with the NVA-319 and the audio is very good. It's maybe a little 'brighter' than my R8A (Drake's audio is my favorite) but it's pleasing and easy to copy for long periods. The big plus for NRD receivers, however, is the ergonomics: the best tuning knob I have used, the best 'feel', and the best build quality. The radio is a gem.

No one else got that impression of ve3's posting either. Anyone with such a severe spelling handicap would most likely have a reading comprehension problem also. That would make effective communication with them impossible.

The money spent on foreign wars would be far better spent in the school systems...mind you, it's hard getting people with University degrees to become bomb bait.

I never got an ID. The signal faded really fast. It was 15-20 over s9 &
then 5 minutes later only a weak het. I suppose that is the way
propagation goes. The QSB should have been a clue that it was getting
ready to be weaker.

I don't think there is one yet, the radio has come to life just now.
Right now you can mostly hear of it on Chinese sites - in Chinese...

Please do so. And while you're there, check how much their DE1102s,
DE1103s, DE1121s and the like cost : I truly appreciate paying around
$50 for radios nearly as good as my many-$100 Sonys (or even Sangean),
but maybe I just get ripped off as well (though on another scale) and
they sell for the equivalent of $5 in China !

Anyway, from what I read on Radiointel and what I see (including a
picture of its German clone by Thieking, that will probably sell for
triple the amount, as will probably its Kaito clone do) it has not
only MP3 recording, but 400 memories, and SSB. REALLY very few buttons
(I guess we'll have to fiddle around a bit for volume just like withe
the DE1103). Sounds promising.

Source record: 95110

I was cleaning out a closet this morning and found a length of wire and an old 33 ft MFJ telescoping mast that I'd all but forgotten about. Just for the heck of it, I attached one end of the wire to the top of the mast, walked out to my fire escape, and started raising the mast. When fully extended, I had a 33 ft vertical antenna, with the base at a height of about 35 ft and the top at about 68 ft. I attached the bottom end of the wire to the 450 ohm input of an ICE matching transformer, then attached a length of coax and plugged it into my receiver.

I guess it's a good thing I don't have anyone living above me.

This worked surprisingly well. In fact, I'd say it worked amazingly well given that the antenna wasn't attached to a decent ground of any kind. At least on the 40 meter band, it was worked better than my Wellbrook. I didn't have time to do a more extensive comparison, but the improvised vertical is still there in case I want to mess around with it more later today.

It's always interesting to make little "discoveries" like this, especially when they run counter to your expectations.

Steve

** U S A. Please note that the upcoming KEVA 1240 DX test from
Evanston, WY will occur 24 hours earlier than announced. It is now
late Saturday night-October 21st running into Sunday morning, October
22nd. That's THIS SATURDAY NIGHT!

KEVA 1240 kHz Evanston, WY DX Test
Date(s): Sunday Morning (Late Saturday Night) October 22nd, 2006
Time: Midnight until 2:00 AM Mountain Time [0600-0800 UT]

Modes of Operation: Transmitter Testing. 1,000 Watts, Non-Directional
Programming: Morse Code ID's, Sweep Tones, Voice ID.
Notes: Transmitter audio chain testing.
E-mail MP3 Recordings and/or details of the test to michaelj @ vcn.com

Postal Reports should be mailed to:
KEVA Radio
P. O. Box 190
Evanston, Wyoming 82930
Attn: Michael Richard

Please include a SASE for reply.

Our thanks to Kevin Redding & the ABDX E-Mail List for arranging this
test! Also hats off to Michael Richard of KEVA. The last KEVA test was
widely heard throughout the US and gave many of us our first `WY` in
the logs. Michael is also helping to arrange tests from other rare
Western states. A true friend to the DXing hobby!

UPCOMING DX TESTS
Latest DX Test News available on the web at: http://www.dxtests.info

4941. Turn $6.00 into $60,000

Newsgroup: rec.radio.shortwave
Date: 2006-10-20 17:30:55 UTC
From: Million Dollar Man <a65lowrider@gmail.com>
Message-ID: <1161365455.876231.54220@b28g2000cwb.googlegroups.com>
Source record: 95117

I'm 18 and I make more money than my parents and so can you"

: Turn $6.00 into $60,000...read this to find out how!!!

: READING THIS COULD CHANGE YOUR LIFE!!!

: I found this on a bulletin board like this one and decided to try it.
: A little while back, I was browsing through a newsgroup, just like
you are now, and came across an article similar to this that said you
could make
thousands of dollars within weeks with only an initial investment of
$6.00! So I thought, "Yeah right, this must be a scam", but like most
of us, I was
curious, so I kept reading.
: Anyway, it said that you need to send $1.00 to each of the 6 names
and address stated in the article. You then place your own name and
address in the
bottom of the list at #6, and post the article in at least 200
newsgroups. (There are thousands) No catch, that was it. So after
thinking it over, and
talking to a few people first, I thought about trying it. I figured
"what have I got to lose except 6 stamps and $6.00, right?"
: Then I invested the measly $6.00 (I use the word "measly" because $6
really is measly compared to the money I have made through the initial
investment).
Well GUESS WHAT!!... within 7 days, I started getting money in the
mail! I was shocked! I figured it would end soon, but the money just
kept coming in.

: In my first week, I made about $25.00. By the end of the second week
I had made a total of over $1,000.00! In the third week I had over
$10,000.00 and it's
still growing.
: This is now my fourth week and I have made just over $42,000.00 and
it's still coming in rapidly. It's certainly worth $6.00, and 6 stamps,
I have spent
more than that on the lottery!!
: Let me tell you how this works and most importantly, why it works....
Also, make sure you print a copy of this article NOW, so you can get
the information
off of it as you need it.
: I promise you that if you follow the directions exactly, that you
will start making more money than you thought possible by doing
something so easy!

: Suggestion:
: Read this entire message carefully! (print it out or download it.)

: Follow the simple directions and watch the money come in! It's easy. It's legal. And, your investment is only $6.00 (Plus postage)

: IMPORTANT:
: This is not a rip-off; it is not indecent; it is not illegal; and it is virtually no risk - it really works!!!! If all of the following instructions are
adhered to, you will receive extraordinary dividends.

: PLEASE NOTE:
: Please follow these directions EXACTLY, and $50,000 or more can be yours in 20 to 60 days.
: This program remains successful because of the honesty and integrity of the participants. Please continue it's success by carefully adhering to the
instructions.
: You will now become part of the Mail Order business. In this business your product is not solid and tangible, it's a service. You are in the business of
developing Mailing Lists.
: Many large corporations are happy to pay big bucks for quality lists. However, the money made from the mailing lists is secondary to the income which is
made from people like you and me asking to be included in that list.

: Here are the 4 easy steps to success:

: STEP 1:
: Get 6 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST."

: Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (to prevent thievery).

: Next, place one paper in each of the 6 envelopes and seal them. You should now have 6 sealed envelopes, each with a piece of paper stating the phrase
"PLEASE
: PUT ME ON YOUR MAILING LIST.", your name and address, and a $1.00 bill. What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL!
: You are requesting a legitimate service and you are paying for it!

: Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office
(1-800-725-2161) and they confirmed that it is indeed legal! Mail the 6 envelopes to the following addresses:

: #1)Shonta Anderson
: 15113 Yarmouth Rd
: Charlotte, NC 28227

: #2)Mike Peplow
: 3756 S. GoldRdige Dr.
: Magna, UT 84044

: #3)Joe Arenas
: 1600 Malibu
: Carrollton, TX 75006

: #4) Charlene Anderson
: 1108 Rosada Dr.
: Charlotte, NC 28213

: #5) Leman Ingram
1525 Gordon Ln
Charlotte, NC 28213

: #6)Matthew Anderson
813-B. Birch Ct
Augusta, GA 30905

:
: STEP 2: Now take the #1 name off the list that you see above, move the other names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR Name as number 6 on
the list.

: STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200
newsgroups. (I think there are close to 32,000+) All you need is 200, but remember, the more you post, the more money you make!

: This is perfectly legal! If you have any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal lottery laws. Keep a copy of these steps for yourself
and, whenever you need money, you can use it again, and again.

: PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to the
directions.
: Look at it this way. If you are of integrity, the program will continue and the money that so many others have received will come your way.

: NOTE:
: You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes people send you. This VERIFIES that you are
truly providing a service. (Also, it might be a good idea to wrap the

$1 bill in dark paper to reduce the risk of mail theft.)
: So, as each post is downloaded and the directions carefully followed, six members will be reimbursed for their participation as a List Developer with one
dollar each.
: Your name will move up the list geometrically so that when your name reaches the #1 position you will be receiving thousands of dollars in CASH!!!
: What an opportunity for only $6.00 ($1.00 for each of the first six people listed above)

: Send it now, add your own name to the list and you're in business!

: ---DIRECTIONS ----- FOR HOW TO POST TO NEWSGROUPS------------
: Step 1)
: You do not need to re-type this entire letter to do your own posting.
: Simply put your cursor at the beginning of this letter and drag your cursor to the bottom of this document, and select 'copy' from the edit menu. This will
copy the
: entire letter into the computer's memory.

: Step 2)
: Open a blank 'notepad' file and place your cursor at the top of the blank page. From the 'edit' menu select 'paste'. This will paste a copy of the letter
into notepad so that you can add your name to the list. Step 3) Save your new notepad file as a .txt file. If you want to do your postings in different
settings, you'll always have this file to go back to.

: Step 4)
: Use Netscape or Internet explorer and try searching for various newsgroups (on-line forums, message boards, chat sites, discussions, etc.)

: Step 5)
: Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in
the Subject, this
: will be the header that everyone sees as they scroll through the list of postings in a particular group, click the post message button. You're done with
your first one!

: Congratulations...THAT'S IT!

: All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup!

: **REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200**

: That's it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O.Box due to the large amount of mail you
will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it.

: **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.**

: Now the WHY part:
: Out of 200 postings, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #6 on the letter.
: Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5 persons respond to each of the original
5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional $125.00!
: Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make an additional $626.00!
: OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #2 and they each only receive 5 replies, that just made
me $3,125.00!!!
: Those 3,125 persons will all deliver this message to 200 newsgroups with my name at #1 and if still ONLY 5 persons per 200 newsgroups react I will receive
$15,625,00!
: With an original investment of only $6.00! AMAZING! When your name is no longer on the list, you just take the latest posting in the newsgroups, and send
out another $6.00 to names on the list, putting your name at number 6 again. And start posting again.

: The thing to remember is do you realize that thousands of people all over the world are joining the internet and reading these articles everyday?, JUST
LIKE YOU are now!!
: So, can you afford $6.00 and see if it really works?? I think so...
: People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of
new honest users and new honest people who are joining the internet and newsgroups everyday and are willing to give it a try?
: Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual internet.

: Remember, play FAIRLY and HONESTLY and this will really work!!!

4942. Democrat leaked "secret" high-level intelligence

Democrat leaked "secret" high-level intelligence

An aide to California Rep. Jane Harman, the committee's top Democrat, did not have an immediate comment Thursday night.

The New York Times did not immediately answer a telephone message seeking comment.

http://news.yahoo.com/s/ap/20061020/ap_on_go_co/congress_leak_1

House Intel Chair Suspends Staff Member
http://www.breitbart.com/news/2006/10/20/D8KSCVN01.html

Hillary Clinton's treasonous record on national defence

As Hillary Clinton is being touted as a presidential candidate for the 2008 election we should take the time to reflect on her co-presidency that did so much to humiliate and degrade America. Let us not forget how the mainstream media covered up - and still is - those Clinton White House scandals that severely compromised US security and put at risk the lives of millions of Americans. I am of course alluding to the transfer of sensitive military technology to China.

This technology greatly improved the accuracy of Beijing's ICBMs that are now targeting American cities. Being the outrageous liar that he is, Clinton denied that USA cities had been targeted despite conclusive proof to the contrary by the CIA. Whose cities did Hillary and hubby think Beijing was going to target? Despite intelligence briefs, Clinton, with the approval of Hillary, knowingly allowed the export of hi-tech know-how to China by Loral, a company that was later investigated by a federal grand jury. That this involved classified information didn't faze the Clintons one bit. Why was that I wonder?

Is it because in 1997 Bernard Schwarze, Loral's chairman and CEO, made the largest personal contribution to the Democratic National Committee? The result of Schwarze' treason (I'm sorry, I meant donation) was that the Clintons got what they wanted - money, Beijing got what it wanted, Schwartz got what he wanted and Americans got to be targets for Chinese missiles. Guess who's ended up with the biggest grin?

Naturally, the whole smelly deal led right back to Chinese funding for the Clintons' election campaign. Anyone who thinks Beijing would fund anyone without getting something in exchange is definitely inhaling. The CIA and FBI knew that Beijing was running agents in the US in the guise of fund-raisers for the Democratic National Committee. Charlie Trie, who 'contributed' oodles of lettuce to the Clintons' defence fund, is unquestionably a Chinese agent. It was Charlie who introduced Ol' Slickory

to the Chairman of the Chinese Communist Polytech at a White House fund-raiser. This gentleman, surprise, surprise, is also connected with Chinese intelligence. Not that this would have bother Bubba Clinton and Madam Dragonfly, both of whom still seem to think everything is for sale, even their country's national security. After all, if the Clintons had beeb genuinely concerned with defending the country they would not have ignored the CIA's intelligence briefs.

Some might think that I'm drawing a long bow on this. No way. When Johnny Chung didn't get what he wanted on PRC visitors to the White House with whom did he meet? You guessed it, Hillary. And did she give him what he wanted? You bet she did. Now why would she do that? For fear of appearing churlish there were Hillary's long-standing ties with Charlie Trie that went right back to Littlerock. That Charlie was a money-peddling Chinese agent was just bad luck for her - not to mention the country - wasn't it? And who had Johnny Huang, another Chinese agent, appointed to the Commerce Department? Right again. It was Hillary. Boy, she sure knew how to pick 'em.

We all know that there were serious security leaks from the Clinton White House. Equally, there is no doubt about the source of those leaks, which brings us directly back to Hillary the Succubus. She took it upon herself, with her husband's happy support, to select a great many of the White House staff. Many of these appointees were known, and still are, for their extreme left-wing views and their belief that the US is an unjust, racist, sexist and exploitative society. It should come as no surprise, therefore, if this deep-rooted animosity to their own country should take the form of an occasional phone call to a Chinese agent. Of course, if this had been anyone else, except the Groper, it would have immediately raised questions about why this pair were so keen on appointing people who despise their own society.

Does anyone really believe Hillary Clinton has changed? Does anyone think that if she were president she would not bring in the same ratbag America-haters as before with all that that entails?

http://www.brookesnews.com/061610hillary.html

Thanks to the Cox Report, we now know that the seven years of the Clinton presidency have coincided with the most massive breach of military security in American history.

As a result of the calculated degrading of security controls at America's nuclear laboratories, the Chinese communists have been able to steal the designs of our arsenal of nuclear weapons, including our most advanced warheads.

As a result of the 1993 Clinton decision to terminate the COCOM security controls that denied sensitive technologies to nuclear proliferators and potential adversary powers, the Chinese communists have been given the secrets of our intercontinental ballistic missile systems, along with previously restricted computer hardware. This allows them for the first time to target cities in the United States.

CIA intelligence failures, Iraq War and the Democrats' treason

The American public is still asking as to why the CIA failed to foresee and take counter measures against the attack on the Pentagon and the World Trade Centre? What was the FBI doing? Well, we have some of the answers: Clinton's administration policy, which was reinforced by the thoroughly despicable Jamie Gorelick, of setting up a 'wall' between the CIA, the FBI and local law enforcement agencies destroyed interdepartmental cooperation.

However, this does not explain why US intelligence has failed so badly in dealing with Middle Eastern terrorists. The answer lies in Congress. To be more specific, Democratic Congressmen who went out of their way to cripple America's intelligence agencies. In this endeavour they had the aid and encouragement of the Washington-based Institute of Policy Studies (IPS); an extreme leftwing organisation that has not only supported every communist regime that ever existed but every leftwing terrorist organisation, specially the PLO.

For years the IPS waged a successful campaign of vilification against America's intelligence agencies, even as it was cooperating with the KGB, Castro's DGI and other communist intelligence agencies, including East Germany's STASI. Thanks to this treasonous campaign and its policy of exposing CIA operatives, one of whom was murdered, the CIA's international network of contacts was badly compromised with foreign contacts cutting off communications from fear of being exposed and possibly murdered.

In 1975 the Center for National Securities Studies (CNSS) - an IPS front - produced Abuses of the Intelligence Agencies a brazen piece of disinformation which influenced the infamous Church and Pike committees that had been set up to investigate American intelligence agencies. This was no surprise considering that not only were KGB agents Wilfred Burchett and Philip Agee mainly responsible for the contents of the publication but both committees, especially the Church committee, had a significant number of sympathisers and members of the IPS on their staffs.

When Carter became president in 1977 he appointed IPS sympathisers to the White House staff who were virtually given carte blanche to dismantle the America's intelligence structure, which is just what these America-haters did.

Without the activities of the IPS the 1974 Hughes-Ryan Act would never have come into existence. This pernicious piece of legislation crippled intelligence operations by guaranteeing they would be leaked to America's enemies. Thus the legislation was written with the intention of sabotaging American intelligence.

There are two common threads here: a) those who took measures to cripple intelligence gathering were all Democrats; b) they were all connected by one means or another to the pro-Soviet IPS. Opposition to the Intelligence Agents Identities Protection Act consisted entirely

of hardcore Democrats like Pat Schroeder, Charles Schumer and John Conyers. The Act had been designed to protect the lives of American agents by preventing anyone from revealing their identities. Needless to say, opponents of the Act are IPS supporters. Just as one would expect, the leftwing mainstream media did not bother to ask them why they were opposed to protecting American agents.

(The ineffable anti-American Conyers is a Castro sympathiser who also supported the attempted Marxist-Leninist conquest of Central America. Needless to say, he hates Bush, defended Hussein, loves the Marxist Chavez of Venezuela and supports domestic terrorists like Peltier and Mumia.)

Because of the IPS and its congressional supporters American intelligence was put in a straitjacket that denied it the power to keep track of the Islamic terrorist network that has been formed in the US. Federal agents could not without great difficulty even attend conferences that pro-terrorist speakers address!

They could not even put these pro-terrorist groups under surveillance unless they provide the Attorney General with almost irrefutable proof that a crime, say the bombing of the World Trade Centre, is going to be committed. How this evidence was to be obtained without surveillance or infiltration was never explained by the likes of Charles Schumer, Schroeder, Conyers and the other Democrats that call themselves patriots.

And who was the driving force behind this legislation? That's right, the IPS. This is what the pro-Soviet, pro-Castro, pro-PLO Richard Barnet, one of the founders of the IPS, had to say about American intelligence: ".[it's] a criminal enterprise which must be dismantled."

However, this is what General George Washington said in 1777 about the need for intelligence gathering:

The necessity of procuring good intelligence is apparent & need not be further urged - all that remains for me to add is, that you keep the whole matter as Secret as possible. For upon secrecy, success depends in Most Enterprises of the Kind, and for want of it, they are generally defeated, however well planned and promising a favorable issue.

But then Washington was a patriot, unlike certain other so-called Americans, including some in Congress and the US Senate.

The situation under Clinton's watch was no better. Under his stewardship the standard for the recruitment of foreign agents and informants was raised to a level so strict that John the Baptist wouldn't have passed muster. This had the intended effect of crippling the accumulation of foreign assets. I say intended because what other explanation could there be for a policy that crippled foreign intelligence gathering? Moreover, people who were influenced by the

IPS were recruited by the CIA, including many from the universities Middle Eastern Studies departments. These departments are notorious for being anti-Semitic and anti-Western.

Without sound intelligence the human cost of effectively dealing with terrorism is only going to rise, making the war against terrorism bloodier than it need be.

I think it's important to keep the focus and blame on Democrats for the fascist banana republic that has befallen America ever since the third week in January 2001. Our nation is becoming insolvent with debt; we're sending our best boys to the mid-east as target practice for goat herders; there's no end in sight; and it's the Democrats fault. When President Bush campaigned in 2000, he made all sorts of terrific promises. But the Democrats forced him to backtrack on every one of them. Democrats ruin everything. Democrats are the No. 1 problem in America. Democracy is the No. 2 problem. We could fix it all in one fell sweep if we did the RIGHT thing, amended the Constitution, tore up the Bill of Rights, became a one-party state and started anew. (Preferrably with images of Jesus Christ and President Bush on our new currency.)

Maranatha.

Hey Billy Boob, the alternative One Party State is much better.
Just have a look at the rip roaring athiest Communist Chinese.
Your heading closer to that direction.

Why the propaganda lies Maranatha?
I didn't hear these kinds of lies when the roles were reversed during the
Impeached Clintoon era. Why now, hmmmm?

Leftists believe that religion is the "opium of the oppressed". Once
their perfect society is achieved, there won't be any need for
religion and it would wither away. So they dismiss the Islamist
threat. America then is their chief enemy. They would do well to
remember what happened to their brethren in Iran & China after they
helped Ayatollah Khomeini & Mao TseDung to achieve power.
They were slaughtered.

Party warns Chinese Communists against professing a religion

It is dangerous for Communist Party members to join a religion; it is
not "a private matter" since they are subject to the Party's
constitution, this according to a paper by the Communist Party Central
Committee in Liaoning province designed to boost atheism.
...
http://www.asianews.it/view.php?l=en&art=5573

FYI Maranatha, it was a Christian priest who told the American Pilgrims:
"Choose your own leaders" - Democracy

Read it all. Read it twice - READ IT THREE TIMES
http://www.discoverthenetwork.com/groupProfile.asp?grpid=6706

Hillary Clinton's Communist spy Ronald N. Montaperto
Back ground info http://www.softwar.net/redteam.html

Hillary's Democrat Admits Passing Military Secrets to China
http://www.washingtontimes.com/functions/print.php?StoryID=20060623-120347-7268r

Ronald N. Montaperto is an author of many Pro-Chinese propaganda papers,
essays and books.

http://www.amazon.com/exec/obidos/search-handle-url/index=books&field-author-exact=Ronald%
20N.%20Montaperto&rank=-relevance%2C%2Bavailability%2C-daterank/104-3144038-0835939

http://www.google.com/search?hl=en&q=Ronald+N.+Montaperto&btnG=Google+Search

Who is Ronald N. Montaperto?

Ask Hillary's "Democratic Leadership Council" & "Progessive Policy
Institute":

Chinese spy Ronald Montaperto's links on Hillary web page are gone since his
indictment:
http://www.ppionline.org/ndol/ndol_ci.cfm?kaid=450004&subid=900021&contentid=1293

But are still in the archives:
http://72.14.205.104/search?q=cache:qMtZb8EYMLEJ:www.ppionline.org/ndol/ndol_ci.cfm%3Fkaid
%3D110%26subid%3D900021%26contentid%3D1293+Ronald+N.+Montaperto+%22Progressive+Policy+Inst
itute%22&hl=en&gl=us&ct=clnk&cd=12
...
Montaperto could receive 40 to 57 months in prison under sentencing
guidelines, but attorneys and friends of Montaperto are seeking leniency and
no jail time.

Montaperto has associates (The Clintoons) among senior intelligence and
policy officials at the Pentagon and White House, which is why officials say
he likely will receive a light sentence.

Stephen P. Anthony, Montaperto's attorney, declined to comment, as did the
Pentagon and officials from the Defense Intelligence Agency, where
Montaperto had worked.
...
http://www.washingtontimes.com/national/20060908-120420-6227r.htm

"THE NEW DEMOCRAT CREDO:
In keeping with our party's grand tradition, we reaffirm Jefferson's
belief in individual liberty and capacity for self-government. We
endorse Jackson's credo of equal opportunity for all, special
privileges for none. We embrace Roosevelt's thirst for innovation and
Kennedy's summons to civic duty. And we intend to carry on Clinton's
insistence upon new means to achieve PROGRESSIVE ideals.... "

[more like HIGH-JACKED the party]

Chair of the "Democratic Leadership Council" American Dream Iniative:
U.S. Senator Hillary Rodham Clinton (D-NY)
http://www.dlc.org/ndol_ci.cfm?kaid=86&subid=85&contentid=893

Progessive Policy Institute: Its founder and still-president is Will Marshall III, co-founder and first Policy Director of the DLC. A longtime friend of Clinton and a supporter of Al Gore...

During the collapse of the Soviet Empire, Mikhail Gorbachev promoted the so-called "Third Way" as an alternative to free markets. This new way of governing would be neither capitalist nor communist, but something in between [Socialist]. In a similar vein, Impeached President Clinton said in his
1998 State of the Union address, "We have moved past the sterile debate between those who say government is the enemy and those who say government is the answer. My fellow Americans, we have found a Third Way." This Third Way calls for business and government to join hands as "partners." As Clinton told the Economic Club of Detroit in February 2002, "We are working with business to use technology, research and market incentives to meet national goals. Some have called this political philosophy the Third Way." In short, Big Business would own the economy (as under capitalism), while Big Government would run it (as under socialism). Corporations would be persuaded to comply with government directives through subsidies, tax breaks, customized legislation, and other special privileges.

[Neo-Liberalism/Socialism=Shadow Party=High-Jacked Democratic Party]

http://www.discoverthenetwork.com/groupProfile.asp?grpid=6901

The Liberal Communist

Postmodern digital capitalism is becoming almost indistinguishable from communism.

The ultimate liberal communist dream is to export the working class itself to the invisible Third World sweatshops.

"Liberal communists" [Hillary's Neo-Liberal Democrates] are the enemy of every TRUE progressive struggle today.

[another case of Hillary High-Jacking]

http://www.inthesetimes.com/site/main/article/2574/

On his trip to the United States this April, China's President Hu did not get a state dinner at the White House. He did, however, have two lavish dinners held in his honor by the business community, first in Seattle before the summit, and then in Washington DC after the summit. The Chinese Foreign Ministry referred to the Washington dinner as an event hosted by "12 friendly organizations" led by the Chamber of Commerce and the U.S.-China Business Council (USCBC). As USCBC President John Frisbie remarked afterwards, "The high turnout for the dinner demonstrates the strength of support for advancing U.S.-China relations through engagement".

Strategist Sun Tzu might see this situation and the opportunities it
presented differently. As he advised, when making plans against an opponent,
"if his men are harmonious, split them."

http://jamestown.org/publications_details.php?volume_id=415&issue_id=aticle_id=2371205

Why the Neo-Libearl Communist is worried
http://eureferendum.blogspot.com/2006/08/why-left-is-worried.html
http://confederateyankee.mu.nu/archives/192431.php

The Lies of the Left-wing Propaganda machine are exposed for all to see.

Read it from the top Maranatha, AGAIN!
Else, go back to watching your Communist Propaganda on CNN.

These days the opium is 'lifestyle' television and it's vicarious trappings.

If you know anything about the way that the church in Europe was used a tool by the ruling classes then you will understand why that statement was made. Beware of all leaders be they of the right, the left, the centre or be they from any religion or sect claiming to know what is right for you. I'm not saying we should have no leaders, I am saying we all need to be vigilant and never assume that anyone has our best interests at heart.

You are rather a silly boy with somewhat narrow and blinkered views who seems to have little understanding of the various political viewpoints. To equate liberalism with communism is plainly ludicrous :)

<snips a bunch of links & rhetoric>

Always remember that you and I have more that is in common than we have that is different. What makes us all human has nothing to do with politics or religion.

Have a good weekend!

Charlie.

The term "Liberal" has been high-jacked here by the same cohorts that have paid for and high-jacked the Democratic Party - the Socialists.

Classical Liberalism remains in the periphery of the political sphere.

Don't confuse the two terms. The Neo-Liberal/Socialist is well on their way towards the athiest communist ideals of thier founders.

Wuz de nite befo Crimmus. And all ower da hood. ereybody wuz' sleepin dey wuz sleepin' good.
We hunged up our stockins An hoped like de' heck That old Santa Clause Be bingin our check.
All o'de fambily Wuz layin in de bed`s While Ripple and Thunderbird Danced through dey heads.
I passed out inna flo Right nex to my maw When I heard sech a fuss I thunk: "it mus be de law !
I looked out thru de bars What covered my doe spectin de sheriff Wiff a warrant fo sho.
And what did I see I said "Lawd look at dat ! Ther wuz a huge watermellon Pulled by giant warf rats.
Now ober all de years Santa Clause he be white But looks liken us bros Gets a black Santa dis nite.
Faster dan a po'lees car My home boy he came. He whupped on dem warf rats an called dem by name.
On Leroy on Lonzo And on Willie Lee On Saphire,on Chenequa Dey wuz a site to see.
As he landed dat watermellon Out der in da skreet I knowed it wuz fo 'sho' Da damndest site I ebber did see.
He didnt go down no chimbley He picked da lock on my doe An I sez to myself "Shit he done dis befoe".
He had his big bag Full of presents I xpect Wid air Jordans and fake gold To wear roun my neck.
But he left no good prezents Jus started stealin my shit Got my drugs, got my guns, even got my burglars kit.
Wit my stuff in de bag Out de window he flewed I woudda tried to catch him but he stole my knife too.
He jumped on dat watermellon An whipped out a switch He wuz gone in a seccon Dat son of a bitch.
Nex year I be hopin Anutha Sanna we get Cuz dis here Sanna Clause Jus ain`t werf a shit.

That's right. The Democrats are the ones that want to silence free speech, unless they agree with it. You wait, if Demos take the house and Senate back we're in a lot of trouble. You might as well hand them all your money and turn in your firearms. They're going to tax it and take them away.

Obviously, some people are having trouble freeing their mind from fixed attitudes and slogans. Here is a simple exercise in analysis:

(1) Make a circle with your thumb and forefinger on each hand. Call the right hand USA, call the left hand Cananda.
(2) Overlap the circles so that you can see light through three shapes.
(3) You should have a center shape that is formed by two hands, an opening formed only by the right hand (the US), and an opening formed only by the left hand (Canada)
(4) You have made a basic Venn diagram used for analysis.
The area in the center represents those things that are common to the US and Canada. The area on the right represents those things that are US interests only; the area on the left represents those things that that are Canadian interests only. Negotiation consists of increasing the common interests and identifying and understanding the special interests.
You can do the same thing with a dime and a quarter and visualize the common area. Make the quarter represent Canada because it is bigger and worth more.
Start out by thinking of those things that the US and Canada have in common. There are lots.
Then start thinking of those things that are specific to one country. There are lots.

This is one of the exercises aimed at freeing thinking from a language box. The English
language is a language of opposites: black, white; up,down; good,bad. The French, for example tend to think in continuums, for them no one is all bad or all good but everyone is a mix of the two. This is why French is considered the language of diplomacy: it allows for more shades of meaning. But I digress. If you want to work with this, get a quarter and draw two overlapping circles. You will find that a Venn diagram helps sort out your thinking.

Quite a few American Towns have changed names over the
years.Jackson,Mississippi used to be LeFluers Bluff long ago.The name
was changed in Honor of Andrew Jackson.
He was the seventh President of the United States of America.Actually
though he wasen't,he was the eight.Can y'all guess who was really the
first President of the United States of America? I know.Do you?

SC and Steve are almost the only people who post about policy.

You know marqueer, if you looked to k4yz as a role model that would be
your first step in getting the help you need.

Heard several other ID's, but at 0150 there was a VERY clear 'Mmmmmistery Radio' by an OM announcer.

Running about S7 here on my 200' W-E wire.

Just this afternoon I was out back looking at how I might finagle 300' + or so aimed at Europe..

The ground (RF return) is the coax shield then the radio chassis then
the AC power line if the radio is plugged in. If the radio is not
plugged in to the AC line the length of the coax is the counterpoise
element of the antenna.

The ICE transformer helped make this a workable antenna for you.

Hello I am a new ham and i have a friend in
Parkersburg, West Virginia. He has a 2 meter radio and echolink.

I do not have echolink.

Does anyone know of a repeater close to where I am, that I
would be able to hit with my 2 meter radio Radio Shack HTX 202 144-148 MHZ.

I live in Queens County NY.

Any information or suggestions would be greatly appreciated.

Thank you,

73

Steven

I don't have the new Passport yet but I expect the best active antenna
to be a loop type.

nfederation#Presidents_of_...- Hide quoted text -- Show quoted text -

13 WRT "The Great Governor of the World"

DATE - July in the Year of Our Lord {One God}
One Thousand Seven Hundred and Seventy-Eight, {1778}

and in the Third Year of the Independence of America.

"IF" - We Mark the Founding of Our Nation as July 4th 1776 :
Then All Things Thereafter are Matters of the History of
these United States of America {USA}

NOTE - That George Washington became
a US President on April 30, 1789.
- - - Before then there had to be a President
of some sorts.
FWIW - George Washington was Elected Commander in Chief
of the Continental Army in May 1775 by the Second Continental
Congress assembled in Philadelphia, PA.

John Hanson, American Patriot and First President
of the United States (1715-1783) and Six other
http://www.marshallhall.org/hanson.html
Presidents were 'elected' {by Congress} after him :
- Elias Boudinot (1783)
- Thomas Mifflin (1784)
- Richard Henry Lee (1785)
- Nathan Gorman (1786)
- Arthur St. Clair (1787)
- and Cyrus Griffin (1788)
- all PRIOR to Geoge Washington taking office.
Technically they were called "President of the
United States of America in Congress Assembled"
http://en.wikipedia.org/wiki/President_of_the_United_States
George Washington was definitely not the first President
of the United States. He was the first President of the
United States under the Constitution we follow today.
It can be said that George Washington was the First
"Elected" President of the United States of America
based on the Votes of the Citizens vice Congress in 1789.

Thanks for the reply, Ace. i lost them about 00:15u, or there abouts.
bad
copy, storms here. never did get an ID, hate to log without a good ID.
I
don't get a lot of the euro-pirates here. always a treat when i hear
one.
this one has not been reported on the yahoo pirate log group as of this
morning @ 10:50u. i mean, i won't log it if i didn't catch the ID, i'm
just
curious. i'm sure you know what i mean. thanks.

Father Michael.

Heard several other ID's, but at 0150 there was a VERY clear
'Mmmmmistery Radio'
by an OM announcer.

Running about S7 here on my 200' W-E wire.

Just this afternoon I was out back looking at how I might finagle 300' +
or so
aimed at Europe..

==========

OK. got ya now. my first post was to your later post. thanks for the ID.
the pirate
blog says it's Dutch, but they are making a game out of finding out the
identy of
the broadcaster. like NA pirates, most euro pirates know each other. i
guess, out
side of the UK, it's a lot easier to get away with being a pirate. BTW,
300 ft.
sounds great, if you have the room. wish i had the room here. thanks
Ace.

Father Michael.

I did not know Yahoo had a group for Pirate loggings.

Yet another Yahoo group to join.

73, Ken

- Just picked up a Sangean DT-120 Digital / PLL / Transparant case matchbox size radio..

- Works great

Does anyoneknow of a list of AM stations that they can point me toards;

I'd like to check out what stations I can pull in with this cool little rig

- Man can't have too many radios

Thanks

Tough... For your future buys, you should not wander away from two
reliable EBay sellers named "liypn"
(http://stores.ebay.fr/V-COM-COLLECTIONS) and "tquchina" (can't find
his shop right now 'cause he said he'd be away -i.e. in the States- for
the comming week, but any search with "Redsun", "Tecsun", "DE1103" or
the like finds him). The DE1103 goes for $60-70 including S&H there.

Although Radio-Mart may not be one of the greatest buyers-sellers on eBay, one question begs to be asked: Was the offer a good one? And if it was, are /were you interested in selling your item in the first place?

5046. OT; Something wicked this way comes.

Newsgroup: rec.radio.shortwave
Date: 2006-10-21 13:42:44 UTC
From: Oaklahoma Joe <OK-nospam@okie.net>
Message-ID: <453A23D0.92BB2FA4@okie.net>
Source record: 95372

In the end it boils down to this: If a group of people are willing to falsify evidence in order to bring the nation to war and, too, can't be trusted to speak truthfully about what they knew prior to 9/11 -- what is to stop them from stealing an election? Considering the fact that the administration and congressional Republicans could face serious legal consequences should Democrats control congress, why wouldn't they do all they could to prevent that from happening? And that is why so many people cannot banish the thought from their minds: "Something wicked this way comes."

_____
http://www.progressivedailybeacon.com/more.php?page=opinion&id=1314

This November
A. Alexander, October 18th, 2006

"By the pricking of my thumbs, something wicked this way comes," said the witch in Shakespeare's "Macbeth." The witch uttered these words in reference to Macbeth himself, who, by that point in the play, was known to be a traitor and murderer. As the November elections approach and the Republicans grow ever more desperate it becomes impossible to turnoff the voice inside many peoples' heads, "Something wicked this way comes."

It wasn't that long ago, George W. Bush, his entire administration, and the Republican Party were viewed by a majority of the American people as possessing impeccable integrity and being honest almost to a fault. Whenever progressives and others tried sounding the alarm and warning that the man behind the curtain was anything but a wizard, or waved red-flags when Bush or his party members were caught in a lie; many were quick to paint the naysayer as being "shrill" or "un-American" or even a "traitor." Today, however, a large majority of Americans see their president and his party for what they are: an emperor without any clothes who is prone to lying and manipulating, and a band of fools willing to do anything or nothing at all -- whatever the situation requires -- in order to protect their naked king and to preserve their hold on power.

Recent polls have revealed some rather startling facts: A large majority of Americans now believe the president and his administration willfully lied the nation to war in Iraq. Incredibly only 16 percent believe the administration is telling the truth about what they knew prior to the terror attacks on 9/11. What is more stunning than the findings is the reality behind them. The American people suspect their president and his party have lied about the biggest events in their lifetime, because the evidence leads to those conclusions.

Indeed, legal experts and Constitutional scholars have all expressed their disbelief over the Republican-led congress failing to investigate many of the administration's actions and, too, their obstinate refusal to exercise their authority and halt the administration's tyrannical consolidation of power. Serious and accomplished legal minds point to several instances wherein the president may have committed impeachable offenses. Still, the Republicans have flatly refused to hold Bush to account.

Then, of course, there is the mountain of illegal and unethical actions committed by the Republican congress: How much of the peoples' government have Republicans sold to big oil, big pharma, and big Jack Abramoff and others just like him? How many laws have they discarded, while pursuing their power-mad lobbyist kickback schemes? Besides laundering money, covering up pedophiles, and handing out lobbyist checks on the House floor - how many laws have DeLay, Hastert, and Boehner violated? Finally, what did GOP congressional insiders know about pre-war Iraq intelligence that the administration kept hidden from Democrats and the American people?

Despite poll after poll showing Democrats leading Republicans by wide margins and despite the nation's most prestigious political organizations, Cook and Rothenberg Reports, predicting that Democrats will pick up between 18 and 30 seats in the House of Representatives; Bush, Cheney, and Rove remain eerily optimistic that Republicans will maintain control of congress. They remain insanely optimistic even though several Republican pollsters have confirmed the impending GOP losses. Bush and his people have absolutely no factual basis for believing Republicans will maintain control of congress -- nothing! That they continue to believe otherwise, considering they have proven themselves willing to lie the nation to war and capable of hiding pre-9/11 facts from the public, is nothing short of scary.

In the end it boils down to this: If a group of people are willing to falsify evidence in order to bring the nation to war and, too, can't be trusted to speak truthfully about what they knew prior to 9/11 -- what is to stop them from stealing an election? Considering the fact that the administration and congressional Republicans could face serious legal consequences should Democrats control congress, why wouldn't they do all they could to prevent that from happening? And that is why so many people cannot banish the thought from their minds: "Something wicked this way comes."

5049. LATEST NEWS FROM THE MEDIUM WAVE CIRCLE

Newsgroup: rec.radio.shortwave
Date: 2006-10-21 14:02:49 UTC
From: Steve Whitt <transmitters@uk2.net>
Message-ID: <1161439369.174411.129030@b28g2000cwb.googlegroups.com>
Source record: 95375

LATEST NEWS FROM THE MEDIUM WAVE CIRCLE
==========

The MWC continues to publish Medium Wave News both on paper and electronically for its members. But we've been busy since earlier this year upgrading our website www.mwcircle.org

This website is now a vital point on the internet for anyone interested in medium wave radio. For example you will find here:

1) A substantial collection of over 50 independent receiver reviews has been added, rescued from Radio Netherlands.
http://www.mwcircle.org/page100.htm

2) Live Solar Terrestrial Data direct from NOAA is now fed directly to our Home Page;
http://www.mwcircle.org/index.htm

3) "Hear Some DX"; a selection of DX sound clips from around the globe.
http://www.mwcircle.org/page10.htm

4) QSL cards and letters many of which cannot be found anywhere else on the internet
http://www.mwcircle.org/page20.htm

6) A glossary "Jargon Buster" has been added to help newcomers to the hobby
http://www.mwcircle.org/page70.htm

7) An Introduction to Long Distance Medium Wave Listening

8) An on-line interactive DRM receiver has been added.

And of course you can join the Circle and renew your membership online.

This year the Circle has expanded its collection of CDs available from the on-line shop http://www.mwcircle.org/mcd.htm and that includes:
* UK & Ireland LW & MW Transmitters
* Radio Caroline 1983-1987
* Laser 558 1984-86
* Sony ICF2010/ICF2001D Archive CD
* Offshore Radio Collection

Furthermore this year the Circle closed its paper reprint service and converted the entire collection of articles to pdf and published them on one CD.

And this Autumn a major task of historic proportions was completed. The complete paper archive of Medium Wave News magazines going back to the 1950s has been scanned as pdfs onto a CD collection; a wonderful resource for anyone interested in MW radio or radio history.

Finally if MW radio is your "cup of tea" why not consider joining us at the Circle? You can also read a free sample copy of Medium Wave News on-line http://www.mwcircle.org/page17.htm to see what it's all about.

Good listening
Steve Whitt

I haven't had a beer in about a week and a half.I am fixin to air up the right front tire (it has a slow leak,I buy those old maypop tires because I hardly ever go anywhere,about twelve miles each month isn't much.If I get new tires on that old van,they would probally out live me) on my raggity old 1978 Dodge van and head on over to the Goodwill store and then to Cowboy Maloney's Electric City store (I think I am going to buy a new tv set) and then to the discount tobacco store and then to the food store for BEER and food.

Well,if snopes says that and because it's on the internet,,,, I am not going to say snopes is true or not.

Performance wasn't as good on some bands, I later found out. Still,
this was a perfectly serviceable antenna. When the power next goes out
and I'm unable to fire up the Wellbrook, I will recreate this vertical
antenna on my fire escape.

5072. KCRW carries VOA programming on news stream?

Newsgroup: rec.radio.shortwave
Date: 2006-10-21 20:18:24 UTC
From: Tester <teest@test.org>
Message-ID: <6rukj2l4krup918rvfh1mu89n6detnl5r8@entropy.org>
Source record: 95198

I notice that KCRW carries VOA programming on its Real Audion NEWS (not over-the-air) stream.

http://www.kcrw.com/news/programs/voa

Isn't that illegal or has that changed? Back when JFK was killed it took an act of Congress to get a VOA film about JFK.seen in the U.S. VOA ain't allowed to send schedules to Dubuque.

Of course someone who's listening to a KCRW stream can be anywhere in the world, but it's primarily intended for residents of Southern California and rhey give times on their website in Pacific Local Time without any indication.

Don't take the Canadian or Mexican listings on this site too seriously -
many of the listed stations don't exist. Most other sites' Canadian and
Mexican listings come from this fcc.gov database, so they aren't any
better. The US listings are good though -- after all, the FCC really
should know who does & doesn't have a license<grin>!

There are links to the official Canadian and Mexican data on my website,
URL in the signature. These are much more accurate but much harder to use.

dxAce,if I am mistaken about John Hanson,,,, I Stand Up and Say So,,,
Perhaps (Note: I said,Perhaps) I was mistaken.

y'all want an update about me going to buy a new tv set thingy? (I knew
y'all would) I did stop off at the Cowboy Maloney's Electric City store
this afternoon and I saw a nice Toshiba 27 inch flat screen CRT tv
set,priced at $325.00 (plus Mississippi Rip Off sales taxes) I need to
clean out enough of my Goodwill store junk out of my van first so when I
go back over there Monday (if it isn't pouring down rain here) morning,I
will have enough room in my van to haul that tv set to my house.They are
open untill 8:00 PM tonight,but I am not going to drive drunk.

I would like to purchase a short wave radio receiver to listen to
world radio broadcasts. Is there certain frequency capacities I should
look for ?
I have done a search on ebay and came up with these listed.

http://cgi.ebay.com/AM-FM-SW-10-Band-Shortwave-Radio-World-Receiver-9803_W0QQitemZ200037107690QQihZ010QQcategoryZ15051QQrdZ1QQcmdZViewItem?hash=item200037107690

Thank you very much for your advise

Ed

Don't waste your time and money on shortwave. It's dead. Go to HD, XM,
or internet radio.

Markie is all three all right. His brain doesn't seem to be able to connect the dots. If KB9RQZ would KF all the people he hates, RRAP would be a policy group again instead of a Laugh-at-the-Retard forum.

I'm not against trying to help Markie, but Markie refuses to be helped. That's why from now on he's: "Mark in the Dark"

Dear Ed,

I do not know if this is a sincere question but, on the assumption that it is, I recommend the following:

1) Do NOT buy a first shortwave receiver on eBay.

2) As this would be your first shortwave receiver, I STRONGLY recommend that you purchase from one of the reputable radio dealers, such as Universal Radio, Grove Enterprises, AES, or C. Crane. The people there will be able to advise you concerning your purchase and will be able to offer any technical help necessary after the sale.

3) Do NOT even consider an analog-tuned shortwave radio such as the one on the eBay link you posted here or any other of that type. These radios are generally of inferior quality and are technologically obsolete. In my opinion, they will "turn you off" to shortwave listening.

4) Again assuming you are serious, be prepared to pay anywhere from $80.00 to $150.00 for your first receiver. Radios in that price class, all digitally tuned, will afford you a very satisfying experience. Lower-priced or "cheap" shortwave receivers will probably prove disappointing. In general, you DO get what you pay for!

5) I should recommend the Sony ICF-SW7600GR radio as a first shortwave receiver. This radio is an excellent performer and is constructed to a high standard. With reasonable care, it should last for many years and is, in fact, so good that you will not "outgrow" it no matter how "serious" a shortwave listener you become.

6) Be prepared for a fairly long learning curve. You MUST carefully read the owner's guide of any receiver you purchase and I recommend that you purchase some basic shortwave books. A good dealer can make recommendations for you. Tuning in shortwave stations is not at all comparable to tuning in your local AM or FM radio stations. Do not let that deter you - learning shortwave listening is a lot of fun and affords the listener a great deal of satisfaction.

I hope the above will be of some use to you.

Best,

Joe

Your best bet is to get a radio that covers everything from 2300kHz to 30Mhz.
Most sets with digital tuners will handle this.

Cheers,

Paul

Ain it da troof? Dat bitch ho doan wanna leave.

But I think she finally took the hint and left for good after she caught me with Condi. And thank God, for I was going broke having crates of fresh bananas flown in daily from Panama. At least Condi has brains and can eat with a fork.

Proclamation? What proclamation? You meant you want me to proclaim that the Great Liberty Net will take place on or near 3950 khz LSB tonight at 22:00 EDT? You want me to alert folks about what W1WCR calls "the most exciting net in amateur radio" and what K5BLB calls "the lickactotchy net"? Or did you want me to say ....

Me neither. Who wants their radio to be at the mercy of shitty, goofy,
virus-prone MicroSlop Windows? As far as I'm concerned, they've yet to
make a truly reliable turn-key computer.

I'd still like to see JRC resurrect the NRD-515, but with a synch
detector, tunable notch, a decent NB, and good audio. To me that would
be the perfect "consumer-grade" DX rig, especially with the 515's
SUPERB ergonomics.

Markie is all three all right. His brain doesn't seem to be able to
connect the dots. If KB9RQZ would KF all the people he hates, RRAP would
be a policy group again instead of a Laugh-at-the-Retard forum.

I'm not against trying to help Markie, but Markie refuses to be helped.
That's why from now on he's: "Mark in the Dark"

SC

The problem with this is that Mark In The Dark doesn't feel he needs help.
In his jumbled mind he is just "defending" his honor. Makes no difference
that HE started most of the angst to begin with, does it? That simply does
not compute in his dyslexic brain. Mark In The Dark doesn't feel that
eighty, ninety, or a hundred posts a day is spam.
I wonder if he abused drugs when he was a kid?

eBay has a legit offer system if the seller chooses to use this feature.
some auctions I do that.
although some of the offers are quite insulting.a Mr. CE Boyd once offered
me about 15% of the buy it now price. like $20 for something with a $125
BIN. that would be like offering $75 for a Drake R8 when the BIN is $500.
he is banned from bidding on any of my auctions.

HI all once again from ken in the UK,

After looking at the 'PDF' spec sheet I now think that the installed filters
are in the second IF and not roofing filter as I first thought.
I can only assume that the DSP will clean-up the filters in the third IF
stage.
I would have thought a radio of this calibre would have used 32 BIT DSP
filtering throughout (with the exception of the roofing filtering in the
first IF stage).
Sounds an interesting radio though, can't wait to buy one (but I will have
to......hi)

All the very best to all, Ken, G4KIR.

KCRW-FM Radio is a community service of Santa Monica College and is
Southern California's leading National Public Radio (NPR) Affiliate.
ABOUT => http://www.kcrw.com/about/about-kcrw
The terrestrial FM Radio Station serves Los Angeles and Orange Counties
at 89.9 FM, Ventura County at 89.1 FM on KCRU/Oxnard-Ventura, the
greater Palm Springs area at 89.3 FM on KCRI/Indio-Palm Springs and
Kern and Northern LA Counties at 88.1 FM on KCRY/Mojave/Antelope
Valley. KCRW can now be heard in Santa Barbara at 106.9. Other
translators carry the signal to the Twentynine Palms and Yucca Valley
areas at 90.7 FM, Gorman at 89.7 FM, Banning at 90.9 FM, the Ridgecrest
area at 100.1 FM, the Thousand Oaks and Conejo Valley areas at 102.3
FM, Ojai at 102.1 FM, and Lemon Grove/Spring Valley in San Diego County
at 89.9 FM. KCRW can be found online at www.kcrw.com.

KCRW News Programming
http://www.kcrw.com/news/programs
Voice of America (VOA) The Voice of America is a multimedia
international broadcasting service funded by the U.S. government
through the Broadcasting Board of Governors.
http://www.kcrw.com/news/programs/voa_
<http://www.kcrw.com/news/programs/voa_>
The Voice of America, which first went on the air in 1942, is a
multimedia international broadcasting service funded by the U.S.
government through the Broadcasting Board of Governors. VOA broadcasts
more than 1,000 hours of news, information, educational, and cultural
programming every week to an estimated worldwide audience of more than
100 million people.

DSL modems are notoriously noisy in the HF spectrum. Ditto for any 10/100
networking.

Noise from such sources is QRM (man-made), not QRN (natural, i.e. lightning
or solar)

Zach,

I have an ASDL wired network with the router/modem (Linksys AG401) and switch (SMC 6505TX) in the same room as my RX. I have two 30 ft runs of CAT5 cable which more or less parallel my indoor wire which runs in the picture rail. I detect no difference in background noise or QRN between the router being on or off.

My two sources of interference are the switch mode PSU for my HP 6620 networked printer and from my Samtron 76E monitor. I have only recently returned to amateur radio after a 40 year break so am still working on these niggles. Solving the printer PSU problem is as simple as unplugging it but the monitor may well be more complicated, especially if it is radiated from the deflection coils rather than mains borne. Does anyone know if TFT monitors are quieter at RF?

Charlie.

Following Sony CRF-1 has been offered on eBay China and worldwide.

http://cgi.ebay.de/ws/eBayISAPI.dll?ViewItem&item=120044728032

It was already offered 2 times this week by different sellers.
The description and pictures are every time the same.
Also other items offered by the sellers are the same every time.
Every time the different sellers with zero feedback were removed by eBay.

Sony 7600 GR

http://www.universal-radio.com/catalog/portable/0360.html

Night is the best time for reception; There is a learning curve on
Shortwave;

- and AM DX'ing too

- you will (eventually) need an external antenna of some sort;

and you will learn about Solar Storms & such

- I do think his is a great hobby . . .

> networking.

I have a 10/100 LAN in my home and no interference problems. I know plenty of other hams who've done likewise. Indeed, many of the big multioperator contest stations use Ethernet LANs to connect the various operating positions.

A very successful station here in the Nashville area has a DSL modem *in his shack* and no problems. (wish he could say the same for his electric power utility!)

I'm sure noisy networking equipment does exist but I wouldn't say it's a common problem.

> Noise from such sources is QRM (man-made), not QRN (natural, i.e. lightning
> or solar)

At least while I was coming up in ham radio:

QRM - interference from another radio transmitter
QRN - interference from something that isn't intended to transmit radio signals

These days the difference gets blurred a bit; if a piece of computer gear radiates a strong signal on 14.31818MHz, it's likely to *sound* like QRM, but since the gear isn't intended to transmit radio signals, is it actually QRN?

Does it really matter?

I use a TFT and i have very little QRN. It adds less than 1% of the
existing noise

MY only sources of noise are:
1. the sat system . I have put a HDD of 80 GB. It adds a razor noise
apparent on 6-13 MHz stronger on 11 MHz and on my 16 m hor anternna
The 2x16 m antenna does not receive so much

2. two nearby grid towers . These towers are abt 30 m from our home.I
found strong noise of S9 on my 2x16 m across all bands and happens
mainly on summer periods. This year the noise changed freqs and was
apparent on 0-5.5 mHz but not all times ... The stronger was on the MW
band with S10

I just received the full Israel Radio schedule from Moshe Oren.
Here are the English and Hebrew schedules in Israel Standard Time.
Israel is UTC +2. I am not converting the times right now, to make sure
that I do not introduce any errors.

The schedule is valid from October 29, 2006 until March 31, 2007.

The complete schedule should be posted on
http://www.iba.org.il/reception/index.asp?classto=Shortwaves
http://www.iba.org.il/doc/shortwaves.pdf
and
http://israelradio.org/sw.htm
within the next few days.

Again- times are Israel Standard Time (UTC +2)

Pretty decent radios for not much money ($50-$75)
Degen 1102/Kaito 1102 (same radio)
http://tinyurl.com/ykurhy

The Degen and Kaito would be the minimum I would start with and honestly I would spend a little more and get the Sony 7600. The Sony 7600 $140 would be a pretty nice beginner radio.
http://tinyurl.com/ylrxd2

Good Comparison chart of various radios:
http://universal-radio.com/catalog/portable/chartp.html

An very interesting radio is a Ten Tec 320D about $350. A pc/computer operated radio. A lot of flexibility here. I purchased a used one that was only a few months old and looked new for $180 a few months back. I normally wouldn't buy a used radio but this was the exception. These radios are enclosed in a metal cabinet and pretty much bullet proof. You can download the software free off of the Ten Tec website to try it out free here: http://tinyurl.com/yeluux The radio can be found here: http://tinyurl.com/ygvhzd There is also other freely available software for this radio.

Jumping up quite a bit in price is a Grundig Satellit 800 about $420. New ones are no longer available but units refurbished by Drake (The guys who made the Drake R8B radio). These are big radios but very easy to use (low learning curve) and pleasant to listen to.
http://tinyurl.com/yc34hr

One of the hottest things out right now is the Eton E1 which is about $500 but comes with a free $150 Grundig 4000. This E1 is unofficially known as the Satellit 900.
http://tinyurl.com/ycpxn3

All of these radios can be purchased at:
www.universal-radio.com

The Sat 800, 900 and the Sony 7600 all have what are called sync detectors. In a nutshell this feature helps to keep an AM broadcast from fading in and out. It makes a radio much more pleasant to listen to. The one on the Sony is not too bad but not as good as the one on the Sat 800 and 900. This is a must have feature if you're going to be listening promarily to AM broadcast stations. I highly recommend it.

I also recomment ordering the book "Passport to Worldband Radio". The newest version is available shipped for $23. This has receiver ratings and a wealth of information about shortwave listening in it.
http://www.passband.com/

If you're really on a budget, you might find someone who will give you last years "Passport to Worldband Radio". You can also go by Barnes and Noble and look through the book there for some general ideas.

Shortwave radio is about 40% radio and 60% antenna. These are figures that I am totally making up but trust me when I tell you that the finest radio available is nothing without a good antenna. The good news here is that really good antennas can be made for less than $10. Read as much as you can about antennas and you will be worlds ahead. Speaking of reading... go here www.dxzone.com and read untill your heart is content. Pay close attention to the antenna sections. There are many antennas listed there that can meet anyones needs.

I hope this gives you a good starting point. If you have any more questions, feel free to ask. Good luck!

It takes an older, more mature woman like Loafie to appreciate your
larger, more evolved manhood and superior intellect. Right Magda?

5164. Stop Bio-TERROR in America: The Government of Torture!

Newsgroup: rec.radio.shortwave
Date: 2006-10-22 18:21:42 UTC
From: poetry4justice@yahoo.com
Message-ID: <1161541302.349028.294620@f16g2000cwb.googlegroups.com>
Source record: 95290

AMERICA IN DANGER of its own out-of-control Bio-Terror:
Is 1984 here? Or cripping... God help us,
blinded!
Originally Secret Bio-Aerosols are misused to HARM and Torture in
U.S.A.
Tempering with pills/ medicine/ treatments to HARM and DISABLE !

Our government needs TORTURE in U.S.?
It has your VOTE, support? Abused... for power-grab or
vicy-terror!
Transitory harm and HELL are U.S.-legal? for
critics-cleansing.

Did Denny Hastert cover the basterd? And other Washington
crooks?

CRITICS (political/social/cultural) are harassed and secretly
persecuted
along with their KIDS in schools/colleges, especially, during
tests/exams
(Think: Guantanamo "stress-positions" in the context of
1984-technologies)
Female FBI-informers are coerced
and abused!

Bio-Aerosols and aerosolized chemicals are used to cause:
- severe colds/coughs turning into bronchitis, eye irritation
- bacterial pneumonia/other pneumonia, shortness of breath
- surges of severe headaches, migraines, dizziness, etc.
- fainting collapses by symptoms-mimicking aerosols
- severe stomach pains (sharp, burning, nausea, etc)
- chest-wall pains, heart-muscle inflammations/trauma, etc.
WORSE:
- heart attacks under cover of second-hand smocking
- aerosolized chemicals from the death-penalty drugs
- car crashes/accidents by Vertigo-causing aerosols
- car accidents due to the fine/controlled tempering
- liver/organ failure by small-dose toxins (trace-less?)
- cancer-causing/facilitating - months-long assasinations
This "Yushchenko syndrom" CAN destabilize NATIONs
Waste, Fraud, Cronism and Abuse in HomeSec/FBI
Fabrication of Believable Info/Manufacturing of accidents

U.S. mail IS polluted in "anthrax-like" manner to HARM critics
Libraries, airplanes, hotels, offices, buses, trains - all polluted!
Remote control, off-jacket/off-book/off-paper aerosols attacks!

A network of Secret Gas-Aerosol Rooms operated in US
(in Philadelphia, Narberth, Lower Merion, PA)
(in Wilmington and Newark, DE)
(in Hampton, Williamsburg and Richmond, VA)
AND ELSEWHERE.... details below...
Freddie May/Freddie Mac likely used to buy silent cooperation
Bio-aerosols used to hurt and simulate panic attacks, etc.!
Soviets locked critics into nut-houses, now WE do the same!
Symptoms-mimicking aerosols do HARM, weak or ill people.

Echo-location/wire-taps/listening used to turn homes into cages!
Remote (radio/EM/shock/vibration) controls for aerosol release...

Say "Stop, I care" - call Senate (202) 224-3121
House of Representatives (202) 225-3121
What IS going on in America? *Print and
Post*
Manufacturing of FEAR to grab more Power and Money, of course.
Tragedy IS used to Power Graib, while Fear is molded into profit!

Big Brother spins protection...
And fear is used to clamp.
Democracy needs action!
On which side do you stand?

Looked at this?!! Go to Google/Yahoo newsGroups:

TORTURE IN USA: Secret Aerosol Rooms

US Scientist needs legal help dealing with the secret aerosols rooms
(SARs) operated illegally in Philadelphia area, Newark (DE), Hampton
and Williamsburg (VA) and other places. Highly volatile aerosols with
and without bacterial content cause dry cough, airways a...

Full text was at:
http://buyit.philly.com/findit/search/results.jsp?catId=krd_philenqda...

This was a new on-line ad placed in Philadelphia Inquirer and
Philadelphia Daily News on www.philly.com (see full text below)
It was about the secret aerosols rooms in US. One could find it by
searching "secret", say, in the ad section of philly.com.

Democracy can not function effectively without the informed public. As
a former NASA Langley scientist working in the area of nanotechnology
and nanoscale particles, I have been recently exposed to the
establishment of secret gas-aerosol rooms inside of United States, at
least in the Mid-Atlantic region (from Philadelphia to Virginia).
First, the highly irritant aerosols have surfaced at the NASA Langley
Research Center in several safety accidents. Investigations were
blocked, probably, because of lack of Congressional approval for such
financially-lucrative research at NASA. Later, these aerosols had been
encountered outside of NASA in Virginia, Delaware and Pennsylvania
.

This points out to yet another proliferation of originally-sensitive technologies into domestic American life to hurt and harass people without a proper oversight and much control. This amounts to torture, extra-judicial prosecution and authoritarian intimidation tactics. The use of such irritants and the operations of the secret gas-aerosol rooms are gross violations of human and constitutional rights of American citizens and various domestic and international laws.

------------------Full text of an ad from Philadelphia's philly.com--------------------------
TORTURE IN USA: Secret Aerosol Rooms
US Scientist needs legal help dealing with the secret aerosols rooms (SARs) operated illegally in Philadelphia area, Newark (DE), Hampton and Williamsburg (VA). Highly volatile aerosols with and without bacterial content cause dry cough, airways and eyes irritation, chest pain and inflammation. FBI and Homeland Security associates are likely operators of SARs, while collaborators may be hotel staff and landlords, who get financial/material or other incentives. US citizens and kids are victims.

Torture is any act by which severe pain, whether physical or psychological, is intentionally inflicted on a person as a means of intimidation, deterrence, revenge, punishment, sadism, or information gathering. At times, medicine and medical practitioners have been drawn into the ranks of torturers, either to judge what victims can endure, to apply treatments which will enhance torture, or as torturers in their own right. http://en.wikipedia.org/wiki/Torture

America in Danger!

America in danger -
The vice is NOT impeached.
America in danger -
The public trust is breached.

Big Brother spins protection
And fear is used to clamp.
Democracy needs action!
On which side do you stand?

Which side are you on, boys?
Which side moves you on?
Which side are you on, girls?
Which side did you wrong?
(Chorus after F. Reece)

Your church is burned by haters.
The priests to go to jail?
Your dreams are cheyned by traitors,
But hope still shines through veil.

Dust rooms came back to gas us
With neo-Naz (or Con) embrace...
New immigrants do make US!
And not the SSuper-race...

***

The Government of Torture

Our government needs TORTURE?!
It has your VOTE, and, now, support?
But peace (not vice) needs steady nurture
And trustful words of calm rapport.

Beware of loud, but FALSE, ideas
That flame a thirsty hellish torch.
Protect the old and true ideals
And Constitution's civic urge.

Yes, torture IS a hellish torch -
In bloody hands, a blinded sword,
With Constitution used to forge
All laws on rights as mere absurd!

Remember victim's silent cry
And SEE the Christ in all of us.
Don't let your government to spy
And torture with some bio-dust.

There is NO good use for evil torture!
No matter how the need is spinned
By Nixon's men, as bloody sergeants,
While truth is painfully re-skinned.

V. Haryk-Bukovynsky (c) VMH

5165. radios for sale

I have the following portable SW receivers I would like to sell:

Kaito model KA1101; complete in box
Apex model 2138; complete in box
Kchibo model KK-216; with manual
Kchibo model KK-939B

Additionally, I have a vintage transistor radio, Morse Airline model, 6 transistor, with original leather carrying case I'd like to sell.

Please let me know if interested in any of these!

Mark in the Dark, If you really hate the forgers so much why do you let
them pack your fudge? Stop following up to them. They're just playing a
game with you called poke the tard and make him squeal. If you stop,
they'll stop.

Me and the divorced brunette woman next door to me just now had another lovers spat,,, again.She said she is going to burn all of my old Mechanix Illustrated and Science And Mechanics magazines I stashed in their old garage over there years ago,,, when that old guy who used to live over there (he had to retire out of the U.S.Army because of diabetes,he is living at the Jackson VA nurseing home one and a half miles North of me nowdays) told me it's ok.

Thing is though,about nienty percent of that old garage over there has fallen down and even I am not dumb enough to step in there concerning the condition that old rotten garage's condition is in.I don't want that woman to go in there and I would have to call 911 on her a...I just now phoned that blonde Bell South woman in Natchez to get her to phone that brunette woman to convince her to keep her happy a.. out of that old garage.Besides,burning trash in the City limits of Jackson,Mississippi is illegal.
HA!,I just had a thought!

Hi people,

Just to let you know that I have put up for download a Radio Logging database app for MS Access for whom ever wants to have a play with it. I did create it for myself but with a little tweaking here and there it is now suitable for the general public.

http://radio.mctowers.co.uk

Enjoy!

here is the link:
http://cgi.ebay.com/Sony-ICF-6800W-Multi-Band-Radio_W0QQitemZ280038452758

one recently went for $500 but it was like new and had and original service manual which usually goes for about $90.

the one for $810 had just about NO description

Well,the Bell South woman once told me she thinks my boobs are a size B,maybe a size C.I want to buy me a deep plunge Wonder Bra,but what would I look like over there at the MacRae's department store at Metrocenter Mall www.metromalljackson.com across Highway 80 from me,looking at Wonder Bras? Maybe I could get one of them wimmin sales clerk gals over there to help me out? I have been hopeing to find me a deep plunge push up Wonder Bra at the Goodwill store,but no such luck yet.

Well,I guess that MacRae's department store isn't over there at Metrocenter Mall anymore.(shows how much I get to the malls,which is almost never) Seems to me I think I do recall that store turned into a Belk's departmental store.There is another mall,Northpark Mall wayyyyyy up North of me,about twelve miles North of doggys couch and there is,or used to be a MacRae's department store there too.I hope they sell Wonder Bras. www.visitnorthpark.org
I have to watch Trees Company Too on tb now.

MM - Please note the the Warranty is only Offered on
the Items that he has pictured in his eBay Auction :
* The Box for the Icom IC-R75
* The Manual for the Icom IC-R75
* The Icom IC-R75 Brochure
* The UT-106 DSP Module for the Icom IC-R75
http://cgi.ebay.com/Icom-ICR-75-Boxed-Like-New-12-Mths-Warentee-UT-106_W0QQitemZ250041850540

What No Pictures of the actual Icom IC-R75 ? ? ?
- - - One Wonders . . .

Radio-Mart 'claims' : "All items you see pictured are pictures of
the ACTUAL item being sold and are copyright of Radio Mart Inc."

FWIW - Generally Radio-Mart's eBay Auctions state :
Hi-Resolution Picture Services - As e-Bay compresses my pictures,
Please feel free to request some excellent high resolution pictures of
the item's we are listing, we only picture the "Actual" items
listed. No trick photography, just excellent equipment offered!! We do
have some exceptional pictures and you can zoom right in to see close
up detail.

So Once Again I Ask - Why No Pictures of the
actual Icom IC-R75 being sold at auction ? ? ?

just for the fun of it ~ RHF

Please note that he is offering a WARENTEE with this Icom....not a
"warranty".

I looked up the word "warentee" in my college dictionary and the word does
not exist.....so, maybe this "warentee doesn't really exist, also?

BTW, no real Icom warranty is transferable to a new owner....think the same
for most manufacturers.

Hi,

I see that a reasonably-priced DRM receiver is finally available that doesn't require connection to a computer:

http://www.thiecom.de/morphy-richards-drm-radio.htm

The price is ☐199 (works out at about US$250) + shipping. Doesn't have direct-entry input but is software upgradeable.

5232. Neener, neener, neener! Mark Morgan, kb9rqz, banned by qrz.com.

I can post to qrz.com all I want. Can you? Any place where people
can control goofs like you, you wind up getting banned.

Doesn't that tell you anything? (That's only a rhetorical question.)
Steve can still post to qrz.com. He should look at you and say, "Neener,
neener, neener!"

In message <1161602701.786333.324590@k70g2000cwa.googlegroups.com>,
Mark Morgan responds to his own admission that qrz.com banned him
with, "why do you play these usenet game fool"

Reportedly off since mid-May according to this:

http://topazdesigns.com/iboc/station-list.html

Now I just wish that the dumbass bastards at WBBM 780, Chicago, would turn
theirs off as well.

Oh well, I fully expect Edweenie to be along shortly to tell us all just how
great HD/IBOC really is.

I'd only buy one of these things if I worked for a museum and wanted an artifact that would remind people in 2011 what DRM was.

I'll bet there is a 12 mo guarantee in there somewhere, but probably
not where you expect. Maybe the UT-106 module has a guarantee....or the
maybe the little rubber feet on the cabinet.

Just checking - you know that DRM is digital radio (for AM/SW) in this case?

A look at the google cache of the Illinois IBOC page, dated Sept. 21, 2006,
shows 35 IBOC stations as opposed to the newer list showing 33 stations.
The other IBOC delister was Chicago's ABC owned 94.7 WZZN-FM.

DKW wrote:

> Best for Chuck Harder to simply retire

I realize I've said some pretty terrible things about Chuck Harder - on this blog and some other media outlets - and I'm sorry.
(This is sincere; you have to believe me.)
As strange as it may seem for me to say this, it wouldn't bother me one bit if Harder retired and another radio talk show host just like him took over. As much as I despise right-wing (or left-wing) anti-Bush politics, that isn't the real reason I hate Chuck Harder so much.
There are other reasons, which I will not divulge because this is a public Web site.
Rest assured, however, that I AM NOT in any kind of criminal (or civil) trouble. My record is squeaky-clean, save for a few traffic tickets 15 years ago and some overdue bills that have long since been paid off.
That said, my reasons for hating Chuck Harder are real. I would not just spontaneously start loathing the guy, because I am not a provocateur; instead, I tend to react.
Yes, I've sent correspondence to Chuck Harder-style political groups (the John Birch Society, the old Liberty Lobby, Paul Craig Roberts, Pat Buchanan, Bo Gritz, various and sundry right-wing Bush bashers, and so on). They may write me back once, tell me to go away, and that's that.
But I don't hate these guys.

What is wrong with Chuck Harder, cuhulin, is that he's stil on the air
- when he isn't in the hospital.
In the last two weeks, he's been off the air except for perhaps last
Monday and Tuesday. On Wednesday, they played his "We'll help you
survive ... " intro theme song three times, followed by several seconds
of "dead air." Then they cut to a previous "For The People" program.
Didn't you hear that? Or am I just imagining it?
Thursday and Friday, they played more Chuck Harder reruns.
cuhulin, this is getting ridiculous, in my opinion. Chuck Harder IS TOO
DAMN SICK to do a daily radio program. You know it. His bosses know it.
I know it. Everyone knows it except Chuck Harder!
It is way, way, WAY past time for Chuck Harder to retire. OK, I'll
grant you that he's helped a lot of folks in the past. But the key word
there is "past." The bloke weighs 400 pounds and is almost 63 years
old. Go to his Web site and see.

the arrghh difference between this model and the aaargh sangean model is that argggh you can put a nice light bulb on top ot the arggh Morphy Richards and that arghh will make reception close to zero ...

Someone told me that that was the reason why at Sangean the radio comes so late: the sales engineer always tests the beta models near his fluorescant lamp. The radio engineers realised that in August, 2006. ... and the beta models always came back with bad quotations ....

Source record: 95495

Dear Frank,

I have never heard an IBOC broadcast and, as I rarely DX on the MWs, I have not personally been bothered by spillover.

However, it seems to me that while IBOC is probably fine for the FM broadcast band, either as an adjunct or even possibly the only broadcast method on that band in the future, it, and all other known digital transmission schemes, ought to be totally banned off the MW band. This band (and its analog broadcasting method) is the only reliable means of communication within the United States; it has the two advantages of long-distance reception capability and a huge installed base of receivers. (Relatively few people own shortwave receivers.) This, of course, would be invaluable in the case of any disaster, natural or man-made. No digital scheme has these advantages.

I should like to see the MW band expanded, say, from 510 kHz to 2000 kHz (and yes - I know this would eliminate an amateur band). Some of these frequencies could then be restricted to clear-channel broadcasts, perhaps one station each from the twenty or so largest cities all around the US. In the event of a catastrophe, the desirability of such stations is self-evident.

My $0.02 anyway.

Best,

Joe

Super strong signal in The Netherlands now. Does anybody have more information about this station? Where does it come from? Really superstrong signal with excellent modulation and nice Italo and Hi-NRG music!

Supposedly from the Netherlands?

Has been heard here in the past week or so, but still a bit early for them to fade in here yet today.

I currently use the non-HD version on my bedside. It is simply the "Boston Acoustics Recepter". It does respectable performance on the MW band using the Terk Advantage AM loop antenna.

I'll be receiving the HD version tonight.

Interesting IBOC read:

5278. A question on HF propagation

Newsgroup: rec.radio.shortwave
Date: 2006-10-23 21:07:51 UTC
From: mischo@vonet.lu
Message-ID: <1161637671.345958.97730@b28g2000cwb.googlegroups.com>
Source record: 95554

Greetings,

I'm currently listening to WHRI on 15665 kHz here in Luxembourg at 10:30pm local (2030 UTC). The signal is fairly good, subject to fading and atmospheric noise, but very audible (SINPO 45433)

Applying basic HF propagation rules, 15 MHz would be a bad choice for night-time DXing, wouldn't it? In fact, the predicted MUF is 10 MHz at this time, the day/night line runs almost exactly at mid-point between the TX site and my location; and yet I'm able to get an audible signal over 6500km (4288 miles) at 10:30pm local, on 15 MHz.

I might add that I'm unable to hear any other DX signals above 12 MHz and have never before been able to pick up anything particularly interesting on the higher end of the SW spectrum at night. Equipment in use here is a JRC NRD-345 receiver and a 15 feet "long"wire (RF-Systems EMF). Should I consider this a lucky catch or am I just missing something regarding HF propagation?

regards, Manuel

I hear only really excellent Dance & Italo music and after a few records
only a simple shout jingle with "Mistery Radio". That's all! Unfortunately
no QSL info. I am very curious where this transmitter is located. The signal
is very strong (9+30dB, full dipole) in The Netherlands. Hard to believe
that it comes from The Netherlands while there is also fading. Most pirate
stations are only broadcasting a few hours but this pirate station has
broadcasted the whole day. At this moment they are still on air. CET is
00:33 now. Seems to be a really Mistery! ;-)

The FCC is currently investigating closed caption radio for the hard of hearing. WGBO and NPR are working on this project. Any thoughts? Is it pretty easy for stations to convert their sound stream into captioning. I wonder if anyone knows what kind of changes in receivers we would need. The newer radios already type song titles and station id's.

Thanks.

The sensitivity would not work out well for most people.

DRM 8 dBuV would be about -89 dBm or S6.
DAB -99 dBm would be around S4 to S5
AM 55 uV would be around S8

This radio sucks.

There was a time when subcarriers on FM stations was used for text. I can't remember how experimental it was, but there were even experiments on using it to deliver computer programs.

Like a lot of things, doing it is likelier easier than implementing it. First they have to figure out a standard, convince companies to sell such radios (or adaptors). Even if the radios can be dumb, and a nearby computer used for the decoding, it will still require a radio with an output jack to feed the computer.

And of course, someone will have to do the translation to text. That will require funding.

Michael

Actually, I think this would be the hard part. Most radio programming isn't scripted; you'd pretty much have to have a "court reporter" following the discussion & typing up the conversation. The situation where two or more people are speaking at the same time is not well handled.

There is now speech recognition equipment available for captioning television programming but it's VERY new. Still, that might be a solution. It would be cost-prohibitive for most stations.

> I wonder if anyone knows what kind of changes in receivers
> we would need. The newer radios already type song titles and station
> id's.

"RDS". On FM stations subcarriers could deliver enough data bandwidth to easily handle this. (I don't think the RDS system has enough room in the RT field but you could use a different subcarrier for the captioning.)

AM stations don't have this capability. IBOC-AM stations do have a small program-associated-data field but I doubt it can handle much more than the station's call letters.

Galaxy Guy

When you learn to write in English then maybe someone will be
interested in your
opinion. I can tell you that you are wrong. The Blair Broadcasting
Corporation is right wing.
Ever since the Hutton Report damaged the BBC unjustly and let Blair off
the hook over going
to war with the USA in Iraq, since then the BBC has changed so that now
Government ministers are increasingly able to make all their own points
virtually unchallenged.
The objectivity of BBC journalism has gone and it is more and more pro
American.
Objective true news journalism and analysis has to be found now from
the English service of Dutch Radio, WRN2. The BBC is now the
Establishment more than it ever was and who-ever wins the next election
will know that the BBC's wings have been permanently clipped by
Blair.The BBC is chasing public money from politicians and this bunch
will make sure it continues to be the Government voice. Believe you me
there is nothing "commie"
about it. It is just far more right wing. What a great achievement for
Mr Blair, you must be proud - your nation isn't!

Hardly anyone has heard an IBOC broadcast because hardly anyone has gone to the trouble of buying an IBOC radio. We just hear the damn useless noise.

According to ibiquity, IBOC broadcasts are available in your area, no matter where in ihe US your area might be:

"HD Radio broadcasting is sweeping the nation. Many of your favorite stations are already HD Radio broadcasters."

http://ibiquity.com/hd_radio/hdradio_find_a_station

Yep, it's that giant sweeping sound.

>
> However, it seems to me that while IBOC is probably fine for the FM

> disaster, natural or man-made. No digital scheme has these advantages.

I'll agree that digital and AM ought to be kept seperate. IBOC, at best, is only semi compatable with AM. Some AM radios do hear the noise even when they are properly tuned to the main channel. If IBOC AM really does catch on, there will be enough sideband noise around to hurt some stations. And, I have no doubt that a full IBOC implementation will drive some listeners away from AM, as their scan tuned radios will be continually dropping right onto that annoying noise as if there were something intelligible there.

>
> I should like to see the MW band expanded, say, from 510 kHz to 2000

>
> My $0.02 anyway.
>
> Best,
>
> Joe
>

In that case, I suppose the government could order the stations to turn off the IBOC noisemakers. It would be little loss, as IBOC AM, in it's current form, is just a redundant simulcast of the main channel.

If there is a need for clear channel broadcasting during national disasters, the government could mandate all sorts of emergency broadcast plans, up to reinstating the old CONELRAD plan.

And I don't think there will be much need for expanding the AM radio band. The new media are challenging the old media. In ten or twenty years, I don't think there will be any shortages of newsprint, film stock or radio bandwidth.

Wow, thanks for posting that link. Now that is truly astounding. How can Ebay allow such bidding to happen in a public place. Collectors should not be allowed to perpetrate that kind of bidding action and run up the price. It's just terrible to think that Ebay actually allowed the final bidder to pay more for the radio than the next-to-the-last bidder.

That said, as a listeners radio the 6800 is really more like the guy we all have known that was a bit slow witted. Eventually the job got done, but it took for ever and he had a tendency to wander around a bit.

How can he offer a 12 month warranty...he just did. Truly magical what half a dozen words can do isn't it. Since you are wondering how he did it, you should pose the question to him. Have you?

> He has no repair facility and is not
> an Icom authorized dealer ?????

How do you know that he has no repair facility. Maybe you should take a tour of his shop. He doesn't have to be an authorized Icom dealer to sell a radio with a 12 months warranty from his shop. You really need to read the auction more closely and clean up your post before pressing the send icon.

And when Mike Maghakian bids, the auction should end right then and there. After all, the radio can't possibly be worth more than what he is willing to pay, right?

Shame on eBay.

What a great idea. I wouls imagine a radio with sub-carrier capability would do the trick. The problem will be converting audio accurately to text. Many of the services that convert text for TV programs can be highly inaccurate and sometimes just stop all together. But it is better than nothing. An automated solution would be ideal - here's hoping.

I often listen to R. Australia on 15515 and RZNI on 15720 (before it
went DRM) at night around 10 PM local time. Radio Exterior Espana also
broadcasts to NA in this band during the evening. They are not the
only stations that I'm able to receive in the 19 meter band at night
but the ones I listen to. Not really the band of choice, though.

BTW, how do you like that EMF antenna? I find that RF Systems makes
excellent products.

5340. rec.radio.shortwave 1st annual members convention and swap meet on 04/01/07

On april 1st, I will host the 1st annual group members convention in Intercourse, PA. Bring you boat anchors and plenty of lube. You will need the lube for the different circle jerk meetings. You can swap spit, your fat wives, boat anchors, nerdy facts, geeky stories and even your sister! The cost for admission is a pair of your mamas soiled panties. We will have testicle sack races, foreskin tug of war, and don't forget sword fighting. At night we can sit around the camp fire and reminese about Hal Turner, Bill Cooper, and all of the other losers of shortwave gone by. On April 2nd we are going to have a shortwave DXing contest. The winner will be crowned with a crown made up of old radio tubes and knobs. Then we will have a knob polishing contest. The prize for that gets a free trip to San Fan., CA.
There will be a dress code. You must have a pocket protector, black polyester pants, white short sleave shirt, white socks, black shoes and a white hanky. No exceptions. To make your reservation call 1-800-565-6656.

Douche Bag

It's better to be right than a left, or a leftist.

The poor brits don't have anyone too counteract a run-away liberal media. We have Savage, Hannity, Limbaugh, Drudge, to help get the truth out. If we didn't have them our media would be commies too. Actually, they are commies, they just cant show it.

Well, enjoy your conference, however I suspect that you will take first and last place in races that are oddly focused on male genitalia. You do have a strange interest in sex with males and dirty underwear don't you. Maybe you will find a restroom to cruise too. Wow....

OTOH, for the rest of us with an interest in a real SWL conference, the annual fest in Kulpsville should prove to be as interesting as the many that preceded it.

Using the classical definition of "left" or "leftist," the pack of
pro-statist, one world government, Bush shills you list are all leftist.

Sadly, they also all repeatedly propogate false information and still
remain on the air.

> If
> we didn't have them our media would be commies too. Actually, they are

Yeah, anything that is critical of Bush is communist. Anything that
supports individual rights is communist. You're a little Orwell lesson
all by yourself.

Watch out for the terrorists!

Don't mean to disagreeable....but MFJ stuff is well known for quality
control problems.
Go over to eham.net and read reviews on just about anything MFJ.

I have to give them credit for the wide array of stuff they offer. I
have owned many MFJ devices over the years and except for one manual
antenna tuner - it's all been pretty disappointing.

I would look at other options, if any exist.

My GE Super Radio III is the very best for medium wave DX-ing I have
ever owned. It brings in an incredible selection of distant AM and FM
stations, particularly at night. I would like to find an am/fm radio
with the same sensitivity but with a timer and station preset buttons.
The Eton X does not do the job. Any suggestions. I do not need SW.
I prefer a small handheld radio not a tabletop.

My cousin will be soon departing back to Italy after having spent 3 months studying english here in the States. I'd like to buy her a going away present which will help her continue to study English. Does anybody know if the VOA has a broadcast in Special English which can be reliably received in Southern Italy on LW, MW SW, or FM. I checked out the VOA's site and they have broadcasts over the web but she isn't a big internet user so I think the radio is the best way to go.

TIA

5370. Passport to Worldband Radio Opinions

Just received the latest edition... I never read cover to cover but instead just skip around to the good parts. This year seems to be a really good edition. More pictures... More reviews... Just more information in general. They changed the cover up a bit. I had heard some people didn't like the cover style so they changed it a bit. Personally I always liked the covers. Probably the best money I've spent recently.

Any other opinions?

Here we go again...

I have the first walkman ever made (a Sony) in good condition made in 1979 or 1980. Anybody wanna give me $500 for it? My gosh... They quit making something and now everybody wants it. There are better radios for almost half as much money...

Frys sells the Eton E1 for $479. I'd much rather have that and $300.

P.S. I also have a Celeron 300 computer with a 4x cd recorder for sale. They don't make those anymore. Who wants to start the bidding at $500?

;)

I personally would never spend more than a couple of hundred bucks on a
portable receiver. To each his own, I guess.

If you're in North America you can get a Sirius radio and
subscription.

I recommend the Sony ICF-SW7600GR. You'll find information about it
here:

http://www.rffun.com/catalog/portable/0360.html

I don't know where you are but since you said $150 I assume you
are in the U.S. and not another place that uses dollars. :-)

Before you go out and buy him a radio, check out the availabilty of
BBC news from other sources. If you are in the U.S. many PBS stations
rebroadcast BBC news (your tax dollars at work) and they are easily
available over the Internet.

Since the BBC no longer targets shortwave broadcasts to North America,
(they don't want to compete with PBS who pays them), it may be a
better choice.

They are also on satellite 24/7 and since a cheap setup (Ku band dish, receiver
and instalation) is under $300 here, it may be a better investment being
a lot cheaper in many places.

If you do decide to buy a radio, there are lots to choose from. The Sony
7600 which has been made in many models for almost 30 years is a good
choice. You may be able to find a radio cheap or free on freecycle or
some of the other lists. The latest one sells for about $150 if you
shop around.

Note that a "modern" receiver may be too difficult for him to operate.
Some people are confused with lots of buttons, menus and settings, some
take to them.

The BBC is not a difficult station to receive when propigation is with you
and I would look for a radio with good sound and less features. Grundig
made a whole line of them from the 1950s until around 2000, but since
they were targeted at the European market, it may be difficult to find them
if you are out of Europe.

Geoff.

I guess I should have stated that yes the radio will be used in USA(Pennsylvania). I'll look for the models suggested...he really likes to "tinker" with the radio so the other sources won't fit the bill. Also, he has bad arthritis and small controls on a radio will be difficult for him to manage. Thanks again!

Don't forget that all BBC radio channels can be heard on the net, right
on your computer. It's free and you don't need any exotic equipment to
do it.

I am surprised nobody else has picked up on this. Why do you think the liberals rail against Limbaugh and Hannity, but they pretty much ignore Savage?

Savage has been 100% show all the way since his inception. A put-on. Entertainment for the masses.

"rtc" <rsmith98@hiwaay.net> wrote
http://article.nationalreview.com/?q=M2Y5ZjE1MWEwYWUyOTUzNTI4ZmY3YzgwMWQ5ZDA4YTU

It turns out that ultra-hot conservative talk show host Michael Savage is backing Oakland Mayor Jerry Brown for state attorney general.

"What can I say? I think he'd make a great attorney general compared to the other guy. By the way, who is the other guy?'' Savage said, when asked why he chose Democrat Brown over conservative Republican Chuck Poochigian.

Savage, whose rants can be heard locally on KNEW-AM, is backing up his hot talk with some hot money as well. Savage Productions, which lists Savage as president and his wife, Janet Weiner, as director, has donated $5,600 to Brown's campaign.

"You have to make choices in an imperfect world,'' Savage said. "And this, this Machugian guy. (Like we said, it's Poochigian.) I never heard of him. I don't even know who he is."

Poochigian has spent the past 12 years in Sacramento, first in the Assembly and now in the Senate. Doesn't impress the president of the Savage Nation.

"Why bet on a horse that isn't going to win? Why throw your money into the garbage?''

So how did the best-selling author of "Liberalism is a Mental Disorder'' wind up backing a liberal once nicknamed "Governor Moonbeam"?

"People change. He changed. He has experience,'' Savage said of Brown. "He started the Oakland military academy -- that was a good thing."

And Brown's politics?

"He's moved to the center, which is what this socialist state needs," Savage said.

"So that's about it. I'm sure you will spin this and make something out of it."

Brown campaign manager Ace Smith would say only, "Michael Savage is one of 5,000 contributors to the campaign."

As for the Poochigian campaign, chief adviser Ken Khachigian told us, "We have Bo Derek, they have Michael Savage -- so between us, we've got the Good, the Bad and the Ugly.''

Who needs to spin after that?

I think the real question is whether the bidder is a radio collector or a radio listener. Collectors as we all know will pay dearly for a mint radio and if the box and instructions are included the sky can be the limit. The needs of a radio listener are usually far more modest. It's clear that at least three people think the radio is worth that much: The final bidder, next highest bidder and the seller.

The only comments I remember reading about shortwave converters were not very good. Poor reception, lots of adjacent signal interference, etc. Additionally, tuning the shortwave bands may be a real pita unless you happen to have an analog am radio. Most cars come equipped with digital radios having 10khz channel separation. Consequently band tuning for stations will involve punching up a frquency on the AM receiver and tuning back and forth with the clarifier dial on the converter while driving down the highway at 65mph.

You would be better off trying to find one of the increasingly rare after market radios designed to receive shortwave. I believe Sony still makes one. But count on only getting strong signals at night.

Didn't the place known as Jackies (sp) over in Bahrain or some such carry some
auto SW receivers?

The rental cars we used to get in Spain, Italy and elsewhere (mid to late 70's)
used to have radios with at least the 6 MHz band installed.

Presets means digital tuning. And on an AM/FM receiver that will
usually mean 10khz tuning increments. Not good for MW dxing. Well,
look for a used Sony 2010 on Ebay.

> The Eton X does not do the job.

It doesn't? Have you tried it? I heard it did a pretty decent job on AM
and FM.

Any suggestions. I do not need SW.

Buy a used 2010 and pretend the SW coverage doesn't exist.

Go to www.QRZ.com and go to the name lookup. Put in your zip code and
see if you recognize any of the names, or if not see any near by.
This will give you the names and adress of Ham radio operators near you.
If you contact a few, you will find one who can help you.

They may be able to help you find a receiver or get your father's one
repaired.

Geoff.

This guy in the USA is apparently still selling the Sony Shortwave
radio for cars:

http://www.shortwavestore.com/sws/product.php?productid=595&cat=0&page=1

And the old european standby Blaupunkt has at least one radio with 49
meter and LW coverage (whoppee) for sale in Germany. It didn't appear
in the UK listings for them however.

http://www.blaupunkt.com/

My honest opinion is that the money and effort it will take to get shortwave coverage in a car isn't justified by the likely results. Signal strength won't be what it is in europe so reception will be subject to a lot of fading, static and car generated noise.

I stopped buying them after I figured out that the only reason I bought
it was for the radio reviews. The frequency information was in my
opinion not very useful and I found I used Monitoring Times and net
based references a lot more.

Exactly. This is especially true if the radio in question fills the
gap to complete a collection.
A rabid collector with some money burning his pockets would readily
drop the cash.
You only live once and money (for the most part) is a renewable
resource :-)

No Problem. If anyone knows of a better make adapter for car, I would
appreciate it. The only time I have for listening to SW is in the car.
At home there is alot going on all the time. Being on the road tuning
it would seem to me some fun and something different to listen to.

Thanks

Ed

I have had considerably better luck with shortwave reception in a car than at home, to be honest. Out on the road there is considerably less noise than at my home. Even just using the whip antenna on the radio (and I've used everything from the ultra cheap Jwin's to a Satellit 700) I get good signals on all the international broadcasters (program listening). Remember that a car radio made with shortwave in mind will make use of the same sort of front end that MW car radios have used from the beginning, thus optimizing the use of the relatively short automobile antenna. Think how well that antenna works for MW reception.. for SW it would be more efficient. As for fading, that's a given on SW, just as it is for MW at night. Anyone who listens to SW regularly expects and accepts it.

Not exactly a handheld, but the CCRadio gives better reception than the
GE Superadio III. I've had two Superadio III's to compare with my
CCRadio, and the CCRadio is every bit as sensitive if not slightly
better than the GE and has better selectivity. Not a cheap radio, but
the best I have found for medium wave DX-ing. Also, the CCRadio tunes
1khz with the knob tuning, or 10khz with the up-down arrow keys.

I will probably buy the new Passport if only because it's a way to
support the hobby. I agree with you though that the reviews in Passport
aren't nearly as trustworthy as they once were.

If this is for real, you are plain nuts.

6.950 is not an ISM/HiFER allocation in the US. Even a Canda ISM s
6.765-6.795.

Canadian RSS-210 rules, Section 6.2.2 (e) permit operation in the same band but at slightly higher field strength, 15.5 mV/m at 30 m. Their frequency stability requirements are similar. Canada also has another license-free HF band not available in the USA; 6,765 - 6,795 kHz. Field strength and frequency limits are the same as those for 13,553 -13,567 kHz.

Terry

5460. 1206 kHz, Radio "France Info" - WooHoo!!!

Newsgroup: rec.radio.shortwave
Date: 2006-10-26 06:39:21 UTC
From: Mahmoud Ahmadinejad <read@book.com>
Message-ID: <12k0mdtn8s9n2f7@corp.supernews.com>

1206KHz Radio France Info - near Bordeaux, Power 300 kW

This is it boys and girls. If you are not now listening for DX on LW/MW or the low end of SW your not DXing. This DX season will be the peak for LW/MW low SW DX . The next peak will not occur for another 11 years.

Heard many heterodynes this past evening in between the N.American broadcasters. That can only mean one thing at my location - Trans-Atlantic DX!

In all my 20+ years of "casual DXing" I have never heard Trans-Atlantic DX on the AM MW band before. I wouldn't ever expect to at my location in the Upper-Midwest (USA). But, one Het on 1206 kHz was especially strong here. So I decided to stick with it. From about 0300 UTC I kept watch. I could briefly hear very weak audio fading in and out every few minutes or so. At first I thought it was in Spanish and thinking perhaps it was an image of a local. But that did not compute. I kept rechecking that it was indeed a Het by rotating the Loop for peak signal and tuning in SSB. The compass direction indicated Central Europe. Finally, at 0517 UTC the Synch Detector pulled it up long and strong enough for me to hear a man and women in French talk with short bumper music between them. All for almost 1 minute. I got so excited I had to run outside, smoke a cigarette (I don't smoke), and come here to post this - LOL.

Now, this is what really makes this reception exceptional. It was accomplished with a Sony ICF-SW7600GR portable radio (mains power - Sony AC adapter) and the Terk AM "Advantage" Loop antenna! - LMAO! In a typical land-locked suburban location. And BTW - anyone who says the Sony Synch Detector doesn't do much does not listen to weak DX. Without that Synch Detector I would be listening to a whining Het all night long. I could only imagine what it must be like using a receiver like the discontinued Drake R8B with a long, long-wire, beverage or large loop. All the more incentive to try the SDR-1000 radio and homebrew a good MW DX loop antenna.

Man, am I psyched! Where is that pack of smokes?! Screw that, where is the Vodka?! - LOL! WooHoo!

I've used a 2010 in the car and gotten decent performance on stronger
stations. Dxing from inside a steel enclosure is difficult...;-) As
you mentioned radios designed for receiving shortwave will do very
well. The shortwave converters can work after a fashion however
finding and clarifying shortwave stations with a digital AM radio that
tunes in 10khz increments will at best be labor intensive and probably
quite frustrating.

Listening to shortwave is a bit of a challenge to begin with, but the
result can be satisfying with the right equipment. A shortwave adapter
would take the owner in the opposite direction however because the
equipment will be difficult to use and will provide barely acceptable
results. The AM display will not register the actual frequency so that
will just add to the fun. For not much more money a radio designed
for shortwave reception would be a far better alternative than some
add-on adapter than one has to find a place to store that is
immediately available for tuning and clarifying.

They think a 1030-1045 UTC English broadcast to N. America is going to have listeners? Who, a couple of insomniacs and a sleepwalker? I guess it's more targeted at Europe than NAm per their listing, but it still seems like a huge waste of effort.

Mike comes by some of his skepticism honestly, though. One of the groups he was involved in was a rather close group of Grundig collectors, some of whom put radios up for time to time. And other members would bid up the price to see to it that legitimate bidders paid their maximum bid. I left the group because of it.

That group, as I understand it, is no longer in existence, but watching that kind or activity definitely leaves a bad taste, even for legitimate auctions that reach stratospheric prices. Add to it the noise of Radio-Mart and others who prey on novices to the hobby with their deceptive practices, and....well, you get a pretty jaded view of not only e-Bay but some sellers here on the newsgroup.

The real problem with e-Bay is that it tends to attract a very large group of individuals, some with deep resources, with interest in any given product, creating the potential for a bidding war with absurd outcomes. Whereas a local brick and mortar auction draws from a limited pool of interested individuals, most of whom may not be interested in any given product. Prices remain reasonable. Values can be had.

By its nature, e-Bay favors the seller, and the house...the very reasons e-Bay exists. No one should be surprised at the nonsense that occurs there. Unfortunately, it's popularity makes it the prime location for the sale of products that we're all interested in. And few of us can outbid Joe Walsh, or any like him, if he should decide he really wants something.

Thom Monaghan entered the collector car market and virtually singlehandedly drove most legitimate collectors out of the market by driving up prices. Though that's not really likely to happen with SW radios, a lot of formerly affordable rigs have been priced out of reach by speculators and the antics of Radio-Mart and his kind.

Mike's disdain for these goofs is easily understood.

i dont know about that mfj unit but i have a home built crystal converter with 8 switchable crystal slots and a variable preselector front end. i can cover several sw bands and it is damn nice even if i do say so myself! it works as well as the am section of the car radio allows it to. the car radio is the most limiting factor and an am radio is not really designed to the specs needed for great reception under sw conditions. for the $100 price of the mfj converter one could buy a cheap portable sw radio that will blow the socks off of any am/converter combo. almost any sw portable will easily outshine the converter and you wont need the calculator and the degree in calculus to tell what frequency you are on. my setup for dumptruck swl'ing is a ratshack dx399(sangean ats 606) and a long base loaded cb whip antenna. it works great! the converter/am radio combo is barely adequate by comparison. mount the portable with velcro, add a fm link to your car radio for loud speaker volume and a mag mount cb antenna on the roof and you have spent about the $100 that the converter cost but with much better reception and a few more sw bands. i am not kidding, almost ANY cheap portable will do better than the am converter combo!

What is a "realistic" price for a good...any good at a given point in
time. From your comments it must not be the market or auction price.

5474. PA0RDT-Mini-Whip

Newsgroup: rec.radio.shortwave
Date: 2006-10-26 17:44:53 UTC
From: Steve <sdaniel13@speakeasy.net>

Source record: 95650

I picked one of these up because it's received really solid reviews from a lot of people. So far I have been using it on the tropical bands and I have to say I'm disappointed. At my location (Brooklyn) its performance is consistently inferior to that of my LF Engineering H-800 "Skymatch" and Wellbrook ALA-330S loop (which isn't really at its best on the tropical bands).

I have to believe that there's something about my location or setup that prevents the mini-whip from realizing its full potential. Although lots of people complain about its being a noisy antenna, I don't find it to be any more prone to noise pickup than the H-800. While I found its performance to lag behind that of the H-800, I'd say it was comparable to some of the other active whips I've used over the years. For the money, it's still a good value, but I frankly cannot imagine this antenna being competitive with a beverage antenna or large scale loop.

And yet....plenty of credible people report that the mini-whip IS competitive in this field.

What can I say? I just report on what I find in my tiny little corner of the universe.

Steve

I read nothing but positive comments about it. I remember Kulpsville's origins as being with members of the departed ANARC SWL net on 7240 and the guys would rave about how informational and fun it was.

Well, now, that's a really good question. Auction prices are not the
same as market prices. And rarely ever have been. Auction prices have
always represented extremes. I've gotten prices at brick and mortar
auctions of $1 for 4 vintage TRF's, each with a 'market' price of near
$200. The same rigs in similar condition have brought twice that and
more on e-Bay.

I've known antique shop owners who set the prices of their own
products at peak e-Bay prices. Such products tend not to move well at
brick and mortar stores. Then, again, it's not uncommon for an e-Bay
seller to turn loose of a usually high ticket item because of the way
the item was presented.

A realistic price for a sw radio is rarely an auction price. Market
price will prevail, because it's usually stable. And not subject to the
wide variations found at auction. But, personally, I don't think market
price is often that realistic. I'm not likely to spend large dollars on
sentiment, and the performance of vintage rigs would be easily exceeded
by common-as-crabgrass low end pieces for fractions of the price.

I"ve spent $100 for higher end Hallicrafters rigs, but that's
unusual. And it's after I've beaten the seller back from something absurd.

Realistic price? In my room, that's usually something close to the
price I'd pay for the same performance in a pocket portable.

New radios are a different matter.

Like most active antennas, the PAORDT suffers from serious common mode
susceptability issues. It is really only half of an antenna because it
doesn't
include a real ground and instead uses the outside of the coax for
that.

By mounting one on a 8' ground rod in moise soil and adding enough
ferrite
beads to choke off common mode noise this antenna does an aceptable, if
not respectable job.

The Sony 7600GR sounds like your best bet. 1 kHz tuning and 100
presets, has a clock with a sleep timer, so I'd assume an on/off timer
as well (though I never needed one so I didn't check). Small enough to
carry around and very sensitive on MW, with a good selectable sideband
synch detector for avoiding interference. Unfortunately you'll have to
put up with SW to get what you're looking for. The GE is analog so
you'll be giving up the feel of a tuning dial, if that matters to you.
That's the reason I sold my otherwise excellent 7600GR.

A well attended auction of real or personal property such as Ebay or a
brick and mortar auction will bring together a number of buyers and
sellers. They interact to establish sales prices that will certainly
vary for a lot of reasons but they represent a range of market prices
for the goods in question. The stock market is another example of an
auction that works reasonably well.

>
> I've known antique shop owners who set the prices of their own

As with buyers who hope to buy a radio at pre-internet prices, such
sellers do not understand that Ebay brings both sides together and they
interact to establish a final price for one item that is realistic at

that point. That price will likely not hold tomorrow for a variety of reasons including buyer interest, condition of the new items and number of sellers with the same item.

> A realistic price for a sw radio is rarely an auction price. Market

It would seem to me that a realistic price is the one that aligns the expectations of buyers and sellers and allows a deal to be completed. An unrealistic price would be one where the seller or the buyer hopes prices will stay fixed and they will be able to deal at yesterday's price.

Malibu wrote
>> I prefer a small handheld radio not a tabletop.

That's not going to work. the strong MW pickup on the GE SRIII is because it has a very large built in ferrite rod antenna for the MW band. The smaller the radio the smaller the inbuilt ferrite rod antenna has to be and hence the MW reception cannot be as good as the large GE SRIII.

You might go with a Sony 7600GR but the MW reception will not be anywhere near as good as your GE SRII due to it's smaller ferrite rod receiving antenna for MW.

The only radio that beats the GE SRIII for MW reception with a digital readout is the Redsun RP2100, but that is in the same size range as the GE SR and although it has presets I found they don't work very well due to there being no keypad entry of a memory number, so you have to waste time going through all the presets until you get back to the one you want

I have one of these and must say I am disappointed with it. Some of my mates have it and rave about it as if it was the best thing since sliced jerky came along.

I find the signal pickup weak and it sucks up the local noise like a vacuum cleaner. It's not a patch on my outstanding RF Systems DX-1 Pro, but then I guess it wouldn't be as the DX-1 costs 17 times more.....

I just ordered one... can't wait. How do you like the 2100 overall? And how
long did it take for you to get it, assuming you got it from one of the Ebay
sellers? Very curious as to the shipping time.

Thanks,

Rich

5489. The Liberty Festival

Newsgroup: rec.radio.shortwave
Date: 2006-10-26 20:25:18 UTC
From: Libertad <kill@leftwinger.org>
Message-ID: <12k26qhdhghgecd@corp.supernews.com>
Source record: 95666

The Hollywood Left is making an all-out effort to tilt the elections and undermine the War on Terror, but you have a chance to make a difference by reading to the end of this letter and joining our cause.

George Soros and the Sundance Film Festival are currently giving away millions of dollars to fund over a hundred anti-American, anti-Israeli films like "My Terrorist" and "The Women of Hezbollah." Meanwhile Robert Redford's Sundance Channel airs such fare as "Torture: The Guantanamo Guidebook," a 'reality TV' show in which American soldiers are depicted torturing 'innocent' Guantanamo detainees.
On October 27th, just one week before the election, a movie will be released in U.S. theatres titled "Death of a President" that depicts the assassination of George W. Bush in graphic detail.
Michael Moore's "Fahrenheit 9/11" and George Clooney's "Syriana" (which sympathetically depicts a suicide bomber who blows up an American oil facility) are currently being used as recruiting tools by terrorists. Hezbollah helps to distribute Moore's film in the Middle East.

Other recently released or forthcoming films from the left include:

"The Road to Guantanamo" - a docu-drama about three Muslim men captured on an Al Qaeda battlefield in Afghanistan who say they were innocent and were tortured by U.S. soldiers at Guantanamo; the film recreates alleged scenes of torture by U.S. troops.
"The Situation" in which American soldiers murder an Iraqi boy and trigger a cycle of violence.
"Stop Loss" starring Ryan Philippe - about a soldier who refuses to serve in Iraq.
"Charlie Wilson's War," starring Tom Hanks and Julia Roberts, written by the "The West Wing's" Aaron Sorkin, which alleges that the CIA helped create' the Taliban and Al Qaeda by funding the Afghan mujahedeen in the 1980s - an allegation that has been repeatedly proven false.

If you're as disturbed by this as we are, you have a chance to make a difference. For the first time since Ronald Reagan left Hollywood for Washington there is a voice in Hollywood to counter the political left. The Liberty Film Festival is Hollywood's first pro-American, pro-Israel, film festival and cultural organization. Its purpose is to create the kind of film product of which Americans who love freedom and love their country can be proud. In June 2006, the Liberty Film Festival joined the David Horowitz Freedom Center to create a force in the entertainment industry which will stand up for the values that prevailed when Hollywood was Ronald Reagan's town.

http://www.libertyfilmfestival.com/

The Liberty Film Festival has featured prominent Hollywood filmmakers like Joel Surnow (creator of Fox's top of the line series about the war on terror "24"), Cyrus Nowrasteh (writer/producer, ABC's "The Path to 9/11"), Steve McEveety (producer "Braveheart," "When We Were Soldiers," "The Passion of the Christ"), Frank Price (former President of Columbia Pictures & Chairman of Universal), director/producer David Zucker ("Airplane" "Naked Gun," "Scary Movie 4"), talk show host Michael Medved, talk show host Larry Elder, and many others.

The 2006 Liberty Film Festival, is scheduled for November 10-12, 2006 in Hollywood, will be screening 28 outstanding new conservative films. These include

"A Journey to Iraq" -- which shows the gratitude Iraqi civilians feel towards President Bush and the American people for their help.
"Suicide Killers" -- how Islamic societies - not George Bush - create terrorists.
"Border War" -- about the threat of illegal immigration
"ACLU: At War With America" -- how the ACLU undermines religious freedom-
plus dozens of other terrific new films by up-and-coming conservative filmmakers.

It is critical that Americans like you support the Liberty Film Festival and the brave conservative filmmakers countering the anti-American propaganda of the Hollywood Left! We can't afford to let Hollywood undermine the War on Terror and turn it into another Vietnam.

The left understands the stakes. On opening night of the 2005 Liberty Film Festival, left-wing protestors rushed the stage of the Pacific Design Center and tried to attack me as I introduced the film "Brainwashing 101" which is about the left's efforts to indoctrinate students on American college campuses. The protestors screamed "Fascists have no right to free speech!" "You have no right to free speech!" They had to be tackled by members of the audience to prevent them from doing me bodily harm. Their message couldn't have been clearer: in Hollywood, conservatives have no right to free speech.

While the Hollywood Left attacks the cause of freedom, undermines the security of our country, and places our troops in danger, filmmakers who support America and the War on Terror are under siege. Just look at the Left's shameful attempt to censor the outstanding ABC miniseries "The Path to 9/11." Democrat Senators and Congressmen wrote to ABC and demanded the miniseries be pulled, simply because it depicted Bill Clinton's failure to capture Bin Laden! And in an unprecedented move, the entire Democrat leadership of the Senate, led by Harry Reid, threatened to pull ABC's broadcast license if the network didn't cancel the miniseries.

The Liberty Film Festival led the way in promoting "The Path to 9/11" and rallying conservative support for this outstanding miniseries. Liberty Film Festival Co-Founder Govindini Murty wrote the first review of "The Path to 9/11," and helped initiate a nation-wide conservative media effort to defend the miniseries and prevent it from being pulled off the air. For her efforts she was attacked in the pages of The Nation and the Huffington Post by Max Blumenthal (son of Clinton lawyer Sidney Blumenthal) who labeled her,

Liberty Film Festival Co-Founder Jason Apuzzo, and everyone who supported "The Path to 9/11" as "political terrorists." This is just one example of how the Liberty Film Festival defends the free speech rights of conservative filmmakers and helps ensure that their work is seen by the public - despite the attempted censorship of the Left.

The Liberty Film Festival was founded in 2004 in Los Angeles by filmmakers Jason Apuzzo and Govindini Murty to foster a new film movement in Hollywood, drawing on conservative talents in the entertainment industry. The first two Liberty Film Festivals, held in 2004 and 2005, attracted a combined total of over 6,500 attendees.

The Liberty Film Festival has screened 41 films, of which 26 have been premieres and 14 films have achieved theatrical or DVD distribution. Outstanding films premiered at the Liberty Film Festival include "Obsession: Radical Islam's War Against the West," "Broken Promises: The UN at 60," "Cochise County, USA," and "In the Face of Evil: Reagan's War in Word & Deed." The Liberty Film Festival has been covered in The New York Times, LA Times, Wall Street Journal, Variety, Hollywood Reporter, Washington Post, National Review, Human Events, Newsmax, as well as on Fox News, CNN, MSNBC, AMC, BBC, and numerous radio shows.

The festival has achieved a tremendous success so far, but it needs your help to expand its efforts and make its impact greater still. The Hollywood Left has taken a side in the fight - and so can you, by supporting the 2006 Liberty Film Festival.

: microvolts per meter @ 3 meters

A second back of the envelope calculation says you are way over the
legal field strength in this case too. As I said before, you can
calculate the power it takes for an isotropic radiator to produce a
field strength of 100E-6 volts/meter at a distance of of three meters
as follows:

1. The area of a sphere of radius r is 4*Pi*r^2. An isotropic
radiator emitting P watts at the center of the sphere will produce a
power density of Pd = P / (4*Pi*r^2) on its surface.

2. The power density is related to the electric field and the
impedance of free space (120*Pi) by the formula Pd = e^2 / (120*Pi).

3. Solving (1) and (2) for the power, P, you come up with P = (er)^2 / 30.

So, for an "e" of 100E-6 and an "r" of 3, P = 0.01732 watts, or
roughly seventeen milliwatts.

Since antennas are not isotropic, the power must be reduced even further
so that the electric field will not exceed the legal limit in the

direction of highest antenna gain.

This calculation ignores line losses and final amplifier inefficiencies, but there's no way you can convince me that you can take a 50 watt transmitter and manage to lose so much power that you have seventeen milliwatts or less being radiated.

All my DeVry Correspondence School instincts once again tell me that you are seriously in violation of the law. Other DeVry grads at the FCC will probably agree, as will our distinguished but indisposed alumnus, AB8MQ, the only man to have discovered negative VSWR.

Correction: I accidentally took the square root instead of squaring the product of e*r. The correct value should be 0.003 microwatts for an isotropic radiator to produce a 100 microvolt/meter field at three meters! That's three thousandths of a microwatt, Todd.

Now tell me that 50 to 100 watts isn't way too much power ...

RFID excitation frequency?
100uV at 3M, ~9'?

Get real, my LOs leak that much.

Your 50W to 100W is so illegal you are plain silly.

That ramps down to less then 1uV at 100M, which is way
below the noise floor at an location I am familiar with.

I see that you are a general class:
"Callsign: N9OGL Class: General Codes: HAI USA
Name: TODD E DAxxxxxxx
Effective: 24 Jan 2002 Expires: 11 Feb 2012

Any general class ham is so clueless as to be a clear luser.

I am only sorry I wasted time and bandwidth reading your posts.

100uV at 3M, that is too sad to even be funny.

Congratulations, you are the 2nd or 3rd person I have killfiled.
You have worked very hard to earn this coveted position.

Terry

5502. Local Nadir (antipodes) map

Newsgroup: rec.radio.shortwave
Date: 2006-10-26 23:50:18 UTC
From: r2000swler@hotmail.com
Message-ID: <1161906618.182122.308480@f16g2000cwb.googlegroups.com>
Source record: 95680

This may have been posted, if so sorry.

A friend asked a question over diner tonight and I thought of this map
I fouond severa years ago.

It shows the local nadir or antipode for every location on the earth.

Scroll down to the well diggers map.
<http://www.wendycarlos.com/maps.html>

For a radio station at your antipode the great circle or shortest path
is every compas heading.

Sadly for me there aren't likely to be all that many stations in the
middle of the ocean.

Terry

fuuny thought it is what a meter says that counts

My only advice to todd remains invest and use a good metter

Yeah, Todd. Get a better "metter"

indeed it is and that is the fact

the FCC will not be impressed by any calualtiononly by the result

that you CAN't understand that FACT is why you show got cancelled

That is not as funny as seeing you get booted off QRZ, though...

Thanks Joe.I will check out that together.net websie.My Bogalsa floor model phonograph was made by Bogalusa Furnitue CompanyBogalusa Louisiana.I think one or both of the springs in the United Air Cleaner Co spring wind motor might be broken.I own two other wind up phonographs too.One of them is a Silvertone portable child's phonograph,it does work.The other one is a table top model,it is a basket case,some of the parts are missing.I bought all three of thm at a Goodwill store years ago.

I cannot believe many of the posts of this so-called newsgroup. Are
there any moderators out there? I've seen very little evidence of that.
>From what I've just read, and of course not just within the previous
topic, it appears the majority of the content here is dominantly
personal attacks and obscenities plus some terribly bad spelling and
quite weak attempts at humor but usually in a very warped style.
Sometimes when I read posts here it reminds me of that old saying that
goes something like this: When you're up to your ears in alligators,
it's hard to remember the prime objective was to drain the swamp.
Thank you to the sane contributors out there that refuse to participate
in the simple-minded drivel that's so often posted here....I DO
appreciate on topic posts and have learned a lot from them. Have a good
one you all.
Koikus

indeed all wars are crimes

sometimes the the lessor crime sometime the greater the worst I will
say of the war on terror is that it MIGHT turn oput to have been a bad
idea but we will never know that ourselves

I doubt you can support that statement. I've had my CCRadio since they first came out and it has beat every other radio I have compared it to, and it has never given me any problems. Outstanding sensitivity and very good selectivity. If you are going to use the built-in antenna, nothing beats the CCRadio.

I have compared it to my two GE Superadios, two Panasonic RF-2200s, Grundig YB-400, Grundig Satellit 800, etc. Adding an external loop antenna to the Satellit 800 resulted in better reception at the low end of the medium wave band, and of course with the 3 bandwidths and selectable sideband sync detector, the Satellit 800 was better at rejecting adjacent station interference. But with built-in antenna, the CCRadio was superior.

> auction that works reasonably well.
>

Actually, it's almost never the case that an auction creates a market
price. Whether e-Bay or brick and mortar. What an auction does is create
a price of the moment, for a particular item, commodity, or recently, a
service. But the price established is not a market price that, taking
into account fluctuations of local or periodic interest, is a stable or
replicable benchmark. Primarily due to the broad and divergant specifics
for any given sale. Persons attending an auction of personal properties
are there often for personal reasons that have no basis in a market,
though they may have influence on a market price. Persons attending an
auction for commercial reasons have more convergant priorities, that

tend to create less random and extreme influences on prices.

Put another way, bidding wars among those attending for personal
reasons can get spirited, and end in extreme prices, whereas bidding
wars among commercial interests are more cautious, and do not end in
prices as extreme.

The stock market is a different kind of auction, where the prices are
set pursuant almost exclusively to commercial interests, and though
prices may vary from moment to moment, they are replicable worldwide,
and are not set by overbidding, as can happen in personal auctions.

And the key phrase of your point is 'well attended.' A well attended
brick and mortar auction is comparatively rare, with most attended in
small numbers of divergant interests. Interest in any given item is far
from assured. And is dramatically affected by local conditions. Whereas
with attendance of larger numbers, e-Bay being the extreme example,
interest in the spectrum of items is more uniform, but bidding can be
far more extreme on single items. The prices do not apply off e-Bay, or
even on e-Bay for similar items. Prices set apply to each auction. But
in the main do not apply beyond that auction. On the other hand, the
stock market, while very well attended, is less prone to extremes by
it's nature, and can set and apply a market price that obtains worldwide.

>

> that point.

I beg to differ. The price will be determined for that auction, and
it will be agreed to by the buyer and seller, but that does not mean
it's reasonable.

Even buyers who overbid will admit that they paid too much.

That price will likely not hold tomorrow for a variety of
> reasons including buyer interest, condition of the new items and number
> of sellers with the same item.
>
>> A realistic price for a sw radio is rarely an auction price. Market

> An unrealistic price would be one where the seller or the buyer hopes
> prices will stay fixed and they will be able to deal at yesterday's
> price.
>

You're making my point for me. A realistic price would be stable.
That's not to say immune to fluctuation, but it would be largely
replicable over a wide area, for a period of time. Instantaneous prices
may or may not be realistic. But just because the buyer and seller agree
doesn't make it a realisic price. It only means that the price was
agreed to at that moment on that item. Stratospheric spikes or
depressions against a replicable market price are unrealistic.

Last Friday (20.Oct.) saw the completion of the new Short Wave Tower outside of Radio St Helena. This Thursday Robert Kipp made the very first Short Wave transmission from Radio St Helena since 1999. The test was made on low power using only 100 watts from a Yaesu FT897D Transmitter to an Opt Beam OB3-27 Antenna system. Local Radio Ham Tom Moyce at Thompson?s Hill confirmed the test transmission which took place at 12:12 GMT . Later on, Simon Oliver, Head of Energy, and Derek Richards, Head of Public Works, came to connect the Earth cable to the transmitter and Amplifier System and undertook other electrical work.

For those that do not know photography, there is a company called KEH
who sells used cameras. They have an extrememly conservative grading system,
never knowlingly sell a camera that does not work 100% unless they say so,
have a short no questions asked return privledge and provide a 90 warranty.

Often I see items on eBay that have closed 20% HIGHER than KEW's price.
Many times it happens on items where if you look at the picture you can
easily see that the seller was not honest about the condition.

Why anyone would pay as much as KEH's price, or more is a mystery to me,
but it happens all the time.

I also see cameras with minimums that are well beyond reason. I assume they
are so that dealers can take them to shows and when someone questions their
price they can honestly say "I sell them on eBay for that".

I think it would be reasonable to assume that without any manipulation on
the seller's part many items are sold on eBay far beyond "market price".

Geoff.

(OT) : M II {The Can-A-Duha-Ian} Asks -
How Many Mexicans Did You Attack With Your Axe Handle Last Night ?

M II - Oh how typically Can-A-Duha-Ian of you :
Projecting the Can-A-Duha-Ian Sport of Baby Seal Bashing
with the mistreatment of Mexicans in the USofA.

NOTE - While the Willful and Intentional Killing of Baby Seals
with Cubs for their Fur is a Legal Business in Can-A-Duha.

The willful and intentional abuse, injury or killing of Illegal
Aliens from Mexico or any other country including Canada
is clearly against the Law in the USofA and rightly so.

FWIW - Most Illegal Aliens from Mexico voting with their
feet clearly feel that it is better to be Illegal in the USofA;
then a Legal Resident of Canada.

OBTW - The Axe Handle Makers of American want to thank
their good Can-A-Duha-Ian Customers for their continued
business and wish you well during this Years Baby Seal Hunt.

God {Allah} Bless America and Our Good Mexican and
Canadian Neighbors - amen, Amen. and AMEN ! ~ RHF

Yeah, so war for fun and profit doesn't seem to be a good idea, but at least you have plenty of war porn to get off on.

If slaughtering and maiming the Haj isn't cool and fun enough for you, you nasty old Talibano, you could look into the continuing casualties in Vietnam and Cambodia.

Watch out for the Commies... er, I mean watch out for the Terrorists...

You're a Bush cultist and you call someone else a retard. What a sphincter.

Hell, you even defended confabulator, junkie and pervert, Limbaugh. Now
that's low.

Did you watch the press conference? He sounded like an idiot and an ass. Among other bizzaro muttering he was flip-flopping on previous flip-flops like how he is going to spin his latest strategery of his personal war on Iraq.

There are still people who think Stalin was a great man and the criticism of him are lies, so I suppose the Bush cult will last forever.

From: John Plimmer <plimmer@telkomsa.net>
Message-ID: <eht6c4$9sl$1@ctb-nnrp2.saix.net>
Source record: 95765

Deutsche Welle notified from Bonn as follows:-
"As of October 29th Deutsche Welle will cancel the coverage of North America with it's German language radio broadcasts on analogue shortwave. In future you will be only able to listen to DW Radio in German via satellite in direct-to-home reception (as is the case already with our English Service), via different cable stations, and, above all, on the internet either as live stream or on demand."

"Starting on 1st January 2007 DW will cancel using the station Wertachtal (Germany) for its transmissions. Instead the transmission stations of the British service provider VTC-Communications (Merlin) will be used."

"January 1st 2007 will also be the date on which our radio broadcasts in Albanian, Bosnian, Bulgarian, Croatian, Macedonian, Polish, Romanese, Serbian and Turkish will be taken off the shortwaves (still available via satellite or internet though)."

Thankfully for me DW broadcasts in English, German, Portuguese and French to Southern Africa are expanded.

Sure !

They thought not everyone had Internet access or a satellite dish on
their hut or tent.

But still you have parts of Europe or Northern America where poeple live
and work in the country side without all these connections as well...

OK, perhaps only a few of them whish to listen to DW, but that's a pity
anyway...

Letterman actually said that on his Oct 26th CBS Late Show. It's the same kind of reaction that people in the blue areas always have when their way of looking at the world isn't shared by someone else. Letterman revealed his true show-biz liberalism, and is probably an SP himself. Tonight (Oct 27th) the Letterman show will actually air the O'Reilly interview that got Dave so spun up when it was taped on Wednesday.

It's tough to think you're politically astute, only to have someone like O'Reilly poke holes in your self esteem. Maybe Dave has been hanging out with liberal Canadians like Paul Schaffer for too long.

They vary over time as the prices on Ebay for radios, antiques and lawn
mowers do.

But that is the way of any auction, whether for commodities, interest rate futures, radios on Ebay. Could you possibly imagine a buyer or seller settling and trading at an unreasonable price? You may not like the price, but it did represent the market clearing price for that one deal.

> Even buyers who overbid will admit that they paid too much.

Live and learn... At the time they felt it was a reasonable price. Hindsight can be different.

[snip]

You're posting from google groups. If you're also reading from google, I
understand you're frustration.

You might want to consider reading this group with a regular newsreader
which has filters and a killfile. To do so, you'll also have to establish
an account with a regular newsgroup server.

Here's an overview on how newsgroups work:

http://computer.howstuffworks.com/newsgroup.htm

See<www.yccc.org/Articles/W1HIS/CommonModeChokesW1HIS2006Apr06.pdf >.

On page 6 he explains the different mixes.
As a ham, Chuck/W1HIS has to be concerned about the wrong ferrite
getting too hot and bad things, like a fire, happening. For us SWL
types, "bad" ferrite has more loss and can be a good thing. If you read
his pdf he explains the logic of how and why.

I have salvaged nearly 1000 various ferrite beads, or as Will calls
them, sleeves from
PCs, VGA monitors, on the power and video cable, printer cables. I had
access to a
metal salvage/recylcer and was allowed all of the cut off cables a man
could want.

If I wanted to do the job with store bought ferrite I would want to
cover the 100KHz through 30MHz range. I would most likely use mix 31.
In both of the commercial receiving set ups I built I used mix 31. The
trick is to use enough ferrite to give at least 1K Z at the lowest
frequency of interest. This can be accomplished with perhjaps 30 run of
the mill, unkown
sleeves, or 10 to 15 of the mixture 31.

To use them you simply remove the RF connector, slide on the sleeves or
torroids, and reinstall, a use a new, RF connector. You can also cheat
and use John Bryant's
method. See <http://www.dxing.info/equipment/coax_leadin_bryant.pdf>.

John's method make more sense becuase you can build the chokes and add
them to the

existing coax. If I were doing another commercial install I would in all likelyhood go with
John's becuase it would be easy to build several chokes and add as many as you needed.

But as W1HIS says, "hams are the cheapest people around", and I like to waste my
money on other toys. From a practical point both methods will work very well. I tend
to like distributing my ferrite beads/sleeves a long the length of the cable to spread the
induction out. I have found this to be, maybe, more effective in eleminating Transferr
Impedance. Coax isn't perfect and under the right, or more properly, wrong condition,
TI can allow out side signals to intrude into the coax. Not all that common and you
will only notice it after you have reduced all the other RFI to a low level.

I hope this helps.

Terry

Hillicrafters? Let me go look on the front of my radio which is sitting on top of my big old antique trunk in my dining room.I need to go to my kitchen and pour another cup of coffee anyway.

Yep,it definetly say Hallicrafters S-38EB on the front of the radio,and it works too.I bought it for $4.00 at a Goodwill store years ago.That price was definetly in line with me :{)

You've missed, or ignored, the point. I've nowhere said anything about
prices not varying, but drawn the distinction between the auction and
the market. There is an enormous difference. And it has to do with

replicability of a price range over a wide area. Auctions only create prices for the moment, between single buyers and single sellers. Not a generally applicable pricing over a market. One may be private between individuals, whereas a market is driven by commercial issues.

Two years ago, a solid state ZT/O was bid up to 5 figures on eBay.

Prices for that model did not skyrocket. Speculators tried, but the market wasn't having it.

Reasonable prices are not determined by individual transactions, but by wide area, cumulative market history.

5604. Clandestine - Radio Zamaneh

Restating once again, I have yet to find a buyer and seller who at the
conclusion of a deal who felt the price was unrealistic. Think about
it for a minute.

Extension 720 Program with Milt Rosenberg
On The Voice of Chicago - WGN Radio AM 720 KHz
Listen Live here - http://wgnradio.com/listen/index.htm
At 9 PM CDT Friday October 27th (0200 UTC Saturday Oct. 28th)

KHRUSHCHEV AND THE COLD WAR

At the height of the Cold War, Nikita Khrushchev baited the United States and other capitalist nations with these words: "Whether you like it or not, history is on our side. We will bury you." With such polemics, he projected an image of Soviet solidarity and strength. However, behind the scenes, Khrushchev's position within the Communist party was much more tenuous. Tonight, we will discuss Nikita Khrushchev's relationships with not only the United States, but also with the other top members of the Soviet regime with ART CYR, professor of political science at Carthage College and an expert in international relations during the Cold War, and TIMOTHY NAFTALI, the newly-appointed director of the Nixon Presidential Library and co-author of the new book Khrushchev's Cold War: The Inside Story of an American Adversary.

Yesterday night's show:

THURSDAY, OCTOBER 26TH
INDIVIDUAL RIGHTS IN EDUCATION
The American university used to be a bastion of intellectual curiosity and individual exploration"a place where students and faculty alike could engage in the free exchange of ideas. However, on many university campuses, free speech and individual liberty has been restricted due to increasingly strident assertions of political and social agendas. Tonight, we will detail some of the most egregious examples of on-campus restrictions with GREG LUKIANOFF, president of the Foundation for Individual Rights in Education http://www.thefire.org/ , who will also explain what students, faculty, parents and alumni can do to preserve free speech in academia.

(OT) : M II {The Can-A-Duha-Ian} Asks -
How Many Mexicans Did You Attack With Your Axe Handle Last Night ?

M II - Oh how typically Can-A-Duha-Ian of you :
Projecting the Can-A-Duha-Ian Sport of Baby Seal Bashing
with the mistreatment of Mexicans in the USofA.

NOTE - While the Willful and Intentional Killing of Baby Seals
with Cubs for their Fur is a Legal Business in Can-A-Duha.

The willful and intentional abuse, injury or killing of Illegal
Aliens from Mexico or any other country including Canada
is clearly against the Law in the USofA and rightly so.

FWIW - Most Illegal Aliens from Mexico voting with their
feet clearly feel that it is better to be Illegal in the USofA;
then a Legal Resident of Canada.

OBTW - The Axe Handle Makers of American want to thank
their good Can-A-Duha-Ian Customers for their continued
business and wish you well during this Years Baby Seal Hunt.

God {Allah} Bless America and Our Good Mexican and
Canadian Neighbors - amen, Amen. and AMEN ! ~ RHF

Don't forget to send a sharp note to your proof-reader.
"Baby Seals with Cubs" indeed. k35454.

That's an interesting observation. Please explain how Ebay conducts a
"real" auction.

What you are calling the final price is the market price, which is the
price agreed on.

> > A realistic price for a sw radio is rarely an auction price. Market
> > price will prevail, because it's usually stable. And not subject to the

> expectations of buyers and sellers and allows a deal to be completed.
> An unrealistic price would be one where the seller or the buyer hopes
> prices will stay fixed and they will be able to deal at yesterday's
> price.

The seller posts the ask price.
The buyer posts the bid price.
If the transaction "happens" it "occurs" at the "market price."
If the transaction "occurs" one of two things or both must "happen":
1. The seller comes down in price.
2. The buyer goes up in price.

At the auction, the seller has stated that he will sell to the highest
bid price usually above some minimum stated price.

> > I"ve spent $100 for higher end Hallicrafters rigs, but that's

> >
> > Realistic price? In my room, that's usually something close to the
> > price I'd pay for the same performance in a pocket portable.
> >
> > New radios are a different matter.

Ask, bid and market price is well-established concepts. The argument
seems to revolve around what is an actual market in SW radios. If EBay
is the place that most (the clear majority) of SW radios are sold, then
I would argue that the EBay auction sold price is the market price. If
more radios were sold in other venues then it would not be.

The situation as I see it is, EBay is a virtual market not a real one where a virtual radio is being sold by a virtual seller and I would be competing against other virtual buyers so I would have to have "faith" that the radio is as described and the other bidders are real and serious about acquiring the radio. This is a very tenuous situation and nothing is properly established as far as I am concerned on EBay much of the time. Moreover, I perceive the used SW radio market as small where a few sellers and buyers can have a big influence on prices. Like Steve Marten said "Let's (all) get small."

Your observations are correct and rational for most of the universe.

The noise generating profiles of most electronic devices allow higher
levels at lower frequencies so the loop will make more of a difference
at lower frequencies.

So is reading some peoples thoughts as expressed in the news group or
trying to follow the logic of their thinking, which is why they are in
the kill file. I'm no fan of horror movies either.

Friend,

I'm always looking for good and intelligent individuals like you to visit my website, www.ChezBrandon.com , and it has pictures of beautiful women, information about aged clones, and a link to Ultimate Fighting Championship, a very good show.

My name is Brandon, and I'm in my 20s, am a college student, and as lie detectors, both conventional and unconventional would show, I've never been sexually penetrated. Moreover, I could be shown pictures of X, Y, and Z, and it would show that I'm only sexually attracted to women.

The Murders of Our Leaders were Stopped.

I can take lie detector and psychological tests. I tell the truth. A mini-psychological test: 8 times 2 = 16, the world is round, not flat, and the year is 2006. Feel free to call me, my cellphone number is 503.740.0272, and utilize a GK-1 voice analyzer truth detecting device too:

>From Congressmen Bill Frist to John Kerry to Dennis Hastert to Hillary Clinton to John Warner to Ron Wyden to Gordon Smith to John McCain to Joseph Lieberman to Nancy Pelosi to Diane Feinstein to Ted Kennedy to anyone else who happened to be in the Congressional chambers during either a joint session of Congress or a State of the Union address from Masons to Skull and Bones members to Secret Service agents to pages to visitors to other good individuals, they all would have been murdered, all of their accomplishments stripped away, their earned wealth stripped away, their homes stripped away, their family and friends stripped away. Moreover, someone else would have been sleeping with their spouses.

Elements of the Mossad, who wanted to bathe in the blood of our Congressmen, and when they seized power they would, as confirmed by psychic vision and confirmed auditorially, "he's right; he's psychic," would outlaw most if not all organizations, including the Masons, and these elements as Victor Ostrovsky writes about in his #1 New York Times bestseller By Way of Deception are out of control, notoriously lie, and have a disregard for life -- I was able, thank God, to thwart the conquest of the USA and the world, and was able to thwart the murder of United States and world leaders, via a psychic vision of Senator John Warner and other Congressmen being choked to death by gas, which was confirmed auditorially from both ears, such as "He saved Congress," who they were going to kill "all of them,""how did he know that?" and "he's psychic" -- murdered my biological Aunt Gloria Atkinson, whom I loved very much, as she did of me, and there is a

tribute to her on my website. Please, friend, be sure to barricade your bedroom door at night. I'm not afraid of aged clones or the attempted chopping off of my appendages (elements of an organization talked about chopping off my right middle finger and right ear, and 10 out of 10 of my toes, like my right middle finger have unique steeple designs).

I'm not afraid of anything. I'll defend myself to the best of my ability, and I commit my life to saving the lives of men, women, and children and strengthening good organizations. I will always remember my Aunt Gloria. Sincerely, Brandon

5643. KTNN 660 Window Rock AZ in Ohio

Recently KTNN has been competing in Ohio with WFAN 660 NYC, after about 6am, playing country music.

That's 1465 miles.

A protective null in their array to the east not working? Usually the WFAN competition is Cubans.

Sort of interesting if you like truck ads in Navajo.

Here's a minute of audio from 6:15 EDST this morning
http://rhhardin.home.mindspring.com/radio660ktnn.ram

They faded in and out, along with the Cubans and WFAN, and finally disappeared
around 7:50 EDST, after both the Cubans and WFAN.

Sunday morning will be standard time again, which I guess will affect
program schedules relative to propagation.

Like new condition with original manual. The "anti-muting" modification has
been done for better tuning through frequencies.

Best offer!

That was a great show. Letterman was in fine form as he took on the
persona of Bill O'Reilly attack dog. How much of that was real and
staged is another question. They are after all both entertainers.

Letterman admonished O'Reilly, asserting "I have the feeling about 60
percent of what you say is crap. ... I don't think that you represent
an objective viewpoint," to which O'Reilly replied, "I respect your
opinion, you should respect mine." But O'Reilly had apparently been
aware of Letterman's unrelenting style. In a 2001 column titled "The
Letterman Experience," O'Reilly praised Letterman's interviewing
abilities:

The late-night program hosted by David Letterman is the toughest
interview show on television.

That's because Mr. Letterman is a smart guy who can spot a phony with
telescopic accuracy and expects his guests to bring something to the
table. If a guest begins to sink on this show, the bottom is a long
way down.

From the January 3 edition of CBS' Late Show with David Letterman:

LETTERMAN: I -- I wasn't aware that this had happened.

O'REILLY: You weren't aware of the big giant controversy over
Christmas?

LETTERMAN: Well, I ignore stuff like that. It doesn't really affect
me. I go ahead and do what I want to do. And, you know, I say, "Merry
Christmas, Happy Holidays, Happy New Year, Happy Hanukkah."

O'REILLY: Here's why it matters. You with me on this?

LETTERMAN: Yeah.

O'REILLY: OK. Ridgewood Elementary School in Dodgeville, Wisconsin. Song, "Silent Night." "Silent Night," you know? Knocked out the words and told the little kids to sing, "Cold in the night. No one in sight. Winter winds whine and bite. How I wish I was happy and warm. Safe with my family out of the storm." They replaced the words to "Silent Night" with that. Now, with all due respect, I think even think the baby Jesus would say, "Give me a break." You know? You want another one?

LETTERMAN: No. But what I don't --

O'REILLY: Whoa, whoa. Great tradition --

LETTERMAN: But what does this prove? It proves that one can --

O'REILLY: It proves there are pinheads at the Ridgewell [sic] Elementary School in Wisconsin. That's what it proves.

LETTERMAN: Right, right.

O'REILLY: Here's another one. Do you want another one, or are you bored with this?

LETTERMAN: I'm -- kind of think we should move on. I mean, but isn't this the kind of thing where, like, once or twice every 20 years somebody gets outraged and says, "Oh, my god, we've got to put diapers on horses"? Isn't it just about, is this like, "So what? Let it go. It'll take care of itself"?

O'REILLY: No. There, there is a movement in this country by politically correct people to erode traditions. And this Christmas tradition is the most cherished in the country. Look, how absurd is it --

LETTERMAN: But I don't, for some reason -- I don't -- I don't --

O'REILLY: That you can't go to a department store --

LETTERMAN: I don't feel threatened.

O'REILLY: No, it's not a matter of feeling threatened --

LETTERMAN: I don't -- I don't think this is an actual threat. I think this is something that happened here and it happened there, and so people like you are trying to make us think that it's a threat.

O'REILLY: Wrong.

LETTERMAN: Because nobody said "Happy Holidays" to me and then said, "Oh, Merry Christmas. Oh, I can't say Merry Christmas."

[...]

LETTERMAN: I'm not smart enough to debate your point to point on this, but I have the feeling -- I have the feeling -- I have the feeling

about 60 percent of what you say is crap. But I don't know that for a fact.

PAUL SHAFFER (Late Show music director): Sixty percent.

LETTERMAN: Sixty percent, that's just a -- I'm just spitballing here now.

O'REILLY: Listen, I respect your opinion, you should respect mine.

LETTERMAN: Well, I -- I -- OK.

O'REILLY: Our analysis is based on the best evidence we can get.

LETTERMAN: Yeah, but I think there's something, this fair and balanced, I'm not sure that it's -- I don't think that you represent an objective viewpoint.

O'REILLY: You have to give me an example if you're going to make those statements.

LETTERMAN: Well, I don't watch your show, so that would be impossible.

O'REILLY: Then why would you come to that conclusion if you don't watch the program?

LETTERMAN: Because of things that I've read, things that I know.

O'REILLY: You're going to take things that you've read? Do you know what they've said about you? Come on. Watch it for -- look, look, watch it for a half an hour, you'll get addicted, you'll be a Factor fan. We'll send you a hat.

LETTERMAN: They'll send me a hat. Yeah, well, send [anti-war protester] Cindy Sheehan a hat.

O'REILLY: I'd be happy to.

LETTERMAN: Bill, it's always a pleasure.

I've bought and sold a few radios over the past 25 years. Certainly not at the level of some collectors on this forum but enough to be able to say I've spun the dial on a fair range of not new receivers. It's fun to find something like a Sony 5900 for $20.00, National HRO500 for $50.00, Panasonic RF5000 for $40.00, Zenith TO for $10.00, etc. Great pleasure to clean them up and learn the radio's quirks and just make them work. Those and other comparable radios were found unadvertised at estate sales and an occasional antique auction for what I considered attractive prices. At the time the prices were all the seller could have gotten (realistic) because the wider world of radio owners and collectors did not have easy access to local sales like that. The availability of internet based auctions has permanently changed the buyer-saller relationship. Local in-place estate sales are disappearing because estate executors and sales managers have discovered Ebay and the other sites. Brick-and-mortar auctioneers now use internet-based bidding in more than one way. And prices have risen because a wider range of buyers now have instantaneous access to those things they can't live without. Consequently todays prices on Ebay are largely realistic because they reflect the interaction of a much larger population of buyers and sellers. If todays prices for collectible radios are compared to those gotten 15 years ago I would conclude that the prices realized earlier were largely undervalued because of the limited interaction of buyers and sellers. I would love to be able to buy a radio at yesterday's prices, but yesterday has long since passed by.

I've had enough of SC in newsgroups!

Please don't answer his flaming posts. I would like for my 14 amateur radio operator girl child (who is working on her code) to be able to use newsgroups without this abuse. We should not have to put up with it either.

Copy and forward the following to abuse@earthlink.net. They should be able to identify him from the headers and their logs.

Dear Earthlink Abuse . . .

Please get this clown off of usenet. There are several hobby groups where he posts regularly his inflammatory material, often with profanities. Our kids who are in the hobby certainly don't need to be exposed to this stuff.

Thanks.

Long time internet user and parent.

And if they fail the code test they get zapped again.

Bringing back 'spark' will be good for ham radio.

5wpm ain't really learning it. I can fart 5 wpm.

Lets kick the requirement up there to between 13 and 20 wpm for all

classes. And no-codes that haven't passed it after a year get booted which

will help clean up the repeaters.

SC

m.News. EarthLink Members should use their best judgment when posting to any newsgroup. Many groups have charters, published guidelines, FAQs, or "community standards" describing what is and is not considered appropriate. Usenet can be a valuable resource if used properly. The continued posting of off-topic articles is prohibited. Commercial advertisements are off-topic in most newsgroups, especially regional groups not specifically named for such. The presence of such articles in a group is not indicative of the group's "intended" use. Please familiarize yourself with basic Usenet netiquette before posting to a newsgroup.

EarthLink considers "multiposting" to 10 or more groups within a two week sliding window to be excessive. EarthLink servers currently limit the number of allowable "cross-posts" to 9.

EarthLink Members may not cancel messages other than their own messages. A Member may cancel posts forged in that Member's name. We may cancel any postings which violate this AUP.

R8B (USB 2.3kHz), two Wellbrook ALA 1530's phased in an ANC-4 to reject
WFAN in NYT to the east and aimed to reject Cubans to the south,
recorded by Real Encoder 5.0 (1997) on a windows95 machine.

I run the encoder in batch mode. I can't figure out the graphical
interface. It used to be free from RealNetworks and may still be
there, for all I know. 8.5kbs is a fine encoding rate for non-music.

1) O'Reilly's guest appearance (indeed, the entire Friday broadcast of
LS) was taped on Monday, not Wednesday.

2) Paul's last name is Shaffer, not Schaffer.

I'll steer away from the overgeneralizations in your post.

You don't. Use a kill file. If you don't, you have only yourself to blame.

It;s much less expensive in the long run than screwing around with everyone's
first amendment rights.

O'Reilly is a political bottom feeder and a sexual predator. You've
got to wonder about people who rely on him for moral direction.

5675. THIS IS CRAZY IT REALLY WORKS

Newsgroup: rec.radio.shortwave
Date: 2006-10-28 19:32:41 UTC
From: shalle <shalle27@aol.com>
Message-ID: <1162063961.915230.211280@e64g2000cwd.googlegroups.com>
Source record: 95851

50,000 for only $5 in two months? You gotta be crazy! How can you make $50,000 for only $5? Well, that's what I was wondering too until I came across this letter.

First of all, IT'S PERFECTLY LEGAL! (Call 1-800-725-2161) if you have any questions about the following opportunity to make $50,000.00 and that probably WITHIN LESS THAN TWO MONTHS!

Well, here it goes: A little while back, I was browsing these newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars within weeks with
only an initial investment of $5.00! So I thought, "Yeah, right, this must be a joke," but like most of us I was curious, so I kept reading. Anyway, it said that you send $1.00 to each of the 5 names and address stated in the article. You then place your own name and address in the bottom of the list at #5, and post the article in at least 200 newsgroups. (There are thousands) No catch, that was it.

As I mentioned before, like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal!

What are the basics of each system and why are they legal? Each system follows the same basic steps which define a
business by offering others
the ability to get involved using the system you advertise in newsgroups
on the Internet and accepting a small fee for the requests of those who respond to be added to your mailing list. Yes, you will be in the business of creating your own mailing list. Their requests to be added to your mailing list which is sent with a $1 fee for your service define
a legal business opportunity under U.S. Postal and Lottery Laws --- a legal business opportunity for you which is covered in title 18, sections 1302 and 1342 of the U.S. Postal and Lottery Laws.

Now, what one does, or does not do, with the mailing list being constructed is a personal decision. One could decide to do nothing

with this list, to use it as a tool in building another business or expanding an existing business. This decision is up to the creator of the mailing list -- this decision is up to you.

Make sure you print a copy of this article NOW, so you can get the information off of it as you need it. The process is very simple and consists of 3 easy steps:

STEP 1: Get 5 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 5 $1.00 bills and place ONE inside EACH of the 5 pieces of paper so the bill will not be seen through the envelope to prevent thievery. Next, place one paper in each of the 5 envelopes and seal them. You should now have 5 sealed envelopes, each with a piece of paper stating the above phrase and a $1.00 bill. What you are doing is creating a service by this. THIS IS PERFECTLY LEGAL! Mail the 5 envelopes to the following addresses:

#1 G. Duchacek
1825 Lee Janzen Drive,
Kissimmee Bay,
Kissimmee, FL. 347347

#2 T. Roberts
4810 Meadow Lark Lane
Paso Robles, CA 93446-4220

#3 D. Wild
32 Ridgeview Circle
Milan, Oh 44846

#4 Smith
935 E. South
Independence, MO 64050

#5 L. GREEN
1752 Sterling Pl
Brooklyn, NY 11233

STEP 2: Now take the #1 name off the list that you see above, move the other names up (2 becomes 1, 3 becomes 2, etc.....) and add YOUR Name as number 5 on the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (There are over 35,000 groups with more being added all the time) All you need is 200, but remember, the more you post, the more money you make! Don't know HOW to post in the newsgroups?
Well do exactly the following:

FOR NETSCAPE USERS:
1) Click on any newsgroup, like normal. Then click on "To News", which is in the top left corner of the newsgroup page. This will bring up a message
box.

2) Fill in the SUBJECT with a flashy title, like the one I used,
something to catch the eye!!!

3) Now go to the message part of the box and retype this letter exactly
as it is here, with exception of your few changes. (remember to add
your
name to number 5 and move the rest up)

4) When your done typing in the WHOLE letter, click on 'FILE' above the
send button. Then, 'SAVE AS..' DO NOT SEND YOUR ARTICLE UNTIL YOU SAVE
IT. (so you don't have to type this 200 times :-)

5) Now that you have saved the letter, go ahead and send your first
copy! (click the 'SEND' button in the top left corner)

6) This is where you post all 200! OK, go to ANY newsgroup article and
click the 'TO NEWS' button again. Type in your flashy
subject in the
'SUBJECT BOX', then go to the message and place your cursor here. Now
click on 'ATTACHMENT' which is right below the 'SUBJECT BOX'. Click on
attach file then find your letter wherever you saved it. Click once on
your file then click 'OPEN' then click 'OK'. If you did this right,
you
should see your filename in the 'ATTACHMENT BOX' and it will be shaded.

NOW POST AWAY!

FOR INTERNET EXPLORER:
It's just as easy, holding down the left mouse button, highlight this
entire article, then press the 'CTRL' key and 'C' key at the same time
to copy this article. Then print the article for your records to have
the names of those you will be sending $1.00 to.

Go to the newsgroups and press 'POST AN
ARTICLE' type in your flashy
subject and click the large window below. Press 'CTRL' and 'V' and the
article will appear in the message window. **BE SURE TO MAKE YOUR
ADDRESS CHANGES TO THE 5 NAMES.** Now re-highlight the article and
re-copy it so you have the changes.... then all you have to do for each
newsgroup is 'CTRL' and 'V' and press 'POST'. It's that easy!! THAT'S
IT! All you have to do is jump to different newsgroups and post away,
after you get the hang of it, it will take about 30 seconds for each
newsgroup!

**REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL
MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200**

**If these instructions are too complex to follow, try Forte's "Free
Agent." It is freeware for noncommercial use. To
download it, simply
use a search utility and type "Forte Free Agent". You should be able to
find it.**

That's it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O. Box due to the large amount
of mail you receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.**

Now the WHY part: This entire principle works because it is in a format
of an upside down tree with thousands of branches. Everyone below you will see to it that the tree continues because they want to get money. Those below THEM will continue because THEY want to get the cash etc. Out of 200
postings, say I receive only 5 replies (a very low example).
So then I made $5.00 with my name at #5 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each ith my name at #4 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #3 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #2 and only receive 5 replies each, I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM of 200 letters with my name at #1 and they each only receive 5 replies, that just made me $3,125.00!!! With a original investment of only $5.00! AMAZING! And as I said 5 responses
is actually VERY LOW! Average is probable 20 to 30! So lets put those figures at just 15 responses per person. Here is what you will make:

at #5 $15.00
at #4 $225.00
at #3 $3,375.00
at #2 $50,625.00
at #1 $759,375.00

Your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $5.00 to names on the list, putting
your name at number 5 and start posting again. The thing to remember is
that thousands of people all over the world are joining the Internet and
reading these articles everyday, JUST LIKE YOU are now!! And this will go on and on and on and on.... get the picture? Well, there's over
5,000,000,000 people on the world and most of them will eventually end up being hooked into the Internet. So there are virtually unlimited resources. Of course this will work the best at the very beginning so the faster you post, the better for YOU!

So can you afford $5.00 and see if it really works?? I think so! People

have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the Internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual Internet.
Remember, play FAIRLY and
HONESTLY and this will work. You just have to be honest. Make sure you print this article out RIGHT NOW, also. Try to keep a list of everyone that sends you money and always keep an eye on the newsgroups to make sure everyone is playing fairly.

Remember, HONESTY IS THE BEST POLICY. You don't need to cheat the basic idea to make the money!! GOOD LUCK to all and please play fairly and reap the huge rewards from this, which is tons of extra CASH. **By the way, if you try to deceive people by posting the messages with your name
in the list and not sending the money to the rest of the people already on the list, you will NOT get as much. Someone I talked to knew someone who did that and he only made about $150.00, and
that's after seven or
eight weeks! Then he sent the 5 $1.00 bills, people added him to their lists, and in 4-5 weeks he had over $10k. This is the fairest and most honest way I have ever seen to share the wealth of the world without costing anything but our time!!! You also may want to buy mailing and e-mail lists for future dollars. Please remember to declare your extra income. Thanks once again.

Police raided the homes and offices of three activists, seized electronic files and photos, and obtained arrest warrants.
...
Authorities are holding a U.S. citizen, Michael Chang (44), who they say was trained as a spy in North Korea between 1989 and 1993... and spied for the North for 10 years.

... evidence has emerged of a direct link between Pyongyang's agents ... and the violent anti-American protests...

"We are still investigating them and this could evolve into a large-scale espionage case"
...

5680. Slightly OT: New KTRB 860, California

Newsgroup: rec.radio.shortwave
Date: 2006-10-28 21:18:28 UTC
From: bpnjensen <bpnjensen@yahoo.com>
Message-ID: <1162070308.740129.268790@i42g2000cwa.googlegroups.com>
Source record: 95856

Hello, all - I had the privilege on Thursday, October 26, to tour the new nighttime transmitter site for KTRB 860 in Alameda County, CA. I was fortunate to be the land use planner for this new facility, and was able to watch the process unfold.

The site is remote, several miles from the nearest paved road south of Livermore, CA. The site includes four towers, each slightly under 200 feet in height (but with a top hat extending 35 feet down each of three guy wires per tower) and arrayed to provide a major beam lobe almost directly west toward the central SF Bay Area Market, with two slightly smaller lobes toward the northwest and southwest (meaning, great coverage toward the Pacific Ocean - take note, Hawai'i and Australia) and with practically no substantial coverage toward the northeast through southeast - in other words, fairly easy across the big pond, but darned tough anywhere in the continental US outside of central CA.

Each tower, each of which in itself is a radiating element (except for the rear most easterly elemnt, which sort of acts as a reflector), is surrounded on all sides by a set of closely spaced radial elements that look like the spokes of a bicycle wheel, and buried shallowly. The combination of 60-meter radiators and thickly installed counterpoises, oriented westward, should provide a potent nighttime skywave toward the Pacific Ocean.

The 50 kW Harris transmitter and related equipment is housed in a modest structure, painted tan to match the CA hills, and is powered completely onsite by a large diesel/propane generator system housed in a noise-baffled containment structure.

Mr. John Burger, the chief engineer for the station, was a great tour guide, and was able to make the technical details seem fairly easy to grasp. The site is currently in on-air testing mode during the daytime on weekdays (at least as of October 27) - the tests consist of nearly continuous unmodulated carrier transmission with brief announcements by a female voice every five minutes of station ID and test announcement. A group of technicians hike all around the site at various distances up to more than a mile away, taking voltage readings to determine the best way to configure the radiation pattern so as to fine tune the radiation lobes.. The tests have been conducted at both full 50 kW power and also at about 1/4 power (12.5 kW), all during the day so as to not generate any skywave eastward that would interfere with nighttime transmissions of other stations that share the frequency. I was able to hear them quiite clearly (20 dB / S9 on the R75 with external random wire, and 50 dB over on the DX-160 with built-in ferrite) from my home in San Lorenzo on Friday Oct. 27, about 20 miles away. The signal

strength varied a bit, a sure sign that testing was in progress.

Mr. Burger indicated that he does not have a set of QSL cards made up for the new site yet, and it may take him a awhile to get to any verifications of reception reports (with a possible exception for yours truly ;-)...but eventually, he would like to get everything set for QSL seekers. He was very excited about being the engineer on a brand new full power AM transmitting facility, especially in this day and age when AM radio faces an uncertain future...these opportunities just don't come along very often anymore.

The main studio is in San Francisco. The website, which is currently quite simple, is www.KTRB860.com. Because they are having some minor troubles getting the daytime site approved in Sonoma County, they may use this site in Alameda County for daytime transmissions too, since they seem to be able to reach the central Bay Area fairly well.

That's all - happy DXing!

Bruce Jensen

They most certainly broadcast at night. They are a regular, very very
strong, in Portland, OR all night long. They may as well be a local, there's
so little fading most nights.

Well..... according to the 27th edition ot the NRC AM Radiom Log....
KTNN is 50kw day & night with an antenna code of U2 which means Omni
Directional by day & directional at Night.
The NRC data may be wrong..... but I doubt it.

73, Ken KG4BIG

He was very excited about being the engineer on a brand new
full power AM transmitting facility, especially in this day and age
when AM radio faces an uncertain future...these opportunities just
don't come along very often anymore.

==========

Wonderful! Bravo!

Father Michael.

Whaaaaaaaaaaa!!

Have you ever sat on the toilet and tried to fart your callsign in
morse code?

You're so wound up, I bet you could fart your call at a nearly
perfect 1000Hz square wave.

They are broadcasting again. Again a really super strong signal here. They
use this emailaddress: misteryradio@googlemail.com
I sent them an email but I got nothing back. :-(

As a "showbiz jackass" he's pretty popular. I don't know if he's a
left-winger, I don't think he identifies with the Hollywood crowd, the
urge to beat up O'Reilly is a normal reaction to that lying,
self-aggrandizing gas bag.

Maybe if you were to pop a valium or two you could deal with the fact
that the majority of folks aren't fooled by O'Reilly's act.

5699. Using the DX-394 to Combat Fading

Newsgroup: rec.radio.shortwave
Date: 2006-10-29 02:04:27 UTC
From: "ve3..." <ve3iut@hotmail.com>
Message-ID: <1162087467.642065.54020@i42g2000cwa.googlegroups.com>
Source record: 95875

I bought a DX-394 several years ago at a Radio Shack closeout and have used it as a bedside radio mostly at night. I am beginning to think that the bad rap this little receiver is stuck with isn't quite deserved. Actually, the radio is not totally bad. It is sensitive, stable and predictable with no surprises

I live in a region where both AM and SW stations are subject to deep fades of the worst kind. The worst kind are the fades where the carrier disappears but the sideband(s) quack away at full volume, making the program painfully unreadable. I have found that using exhalted carrier makes the program listenable if not perfect. Here's how you use the excellent stability of the DX-394 to overcome deep selective fading on an AM signal.

(1) Switch on the cw position

(2) Carefully zero-beat the signal with the fine tuning control

(3) Reduce the RF gain control until the signal starts to weaken. This seems to give the best ratio of signal to injected carrier.

(4) Using the fine-tuning control, find the spot where the fluttering noise from the undesired sideband is lowest (the DX-394 does not have great filters)

(5) Enjoy the program. The sideband may fade out but you will not get the "Quack-quack" as you are supplying the carrier.

The only other radio I can do this with is my Sony: all the others drift too much to make this method useful. I have also clipped the purple "chuffing" lead. There are no other mods.

5701. need to replace YB400?

Newsgroup: rec.radio.shortwave
Date: 2006-10-29 02:17:43 UTC
From: "news.rcn.com" <news.rnc.com>
Message-ID: <cNKdnT-TRvnTktnYnZ2dnUVZ_vadnZ2d@rcn.net>
Source record: 95877

Anyone got any suggestions as to whether there have been any developments in short-wave radio technology in the last few years which mandate looking for some specific radio please? I accidentally broke the display on my YB400, which never actually picked up many stations at all in any event. Only VERY local god-spots. I always suspected some problem with its factory set-up. The scan function would just spin past perfectly strong stations for no apparent reason. And I use it in the dark and when I DID find some station, setting the memory is (to me) a nightmare. In the dark, switching between bands is virtually impossible. Worst of all, using it with headphones is an even worse nightmare: It pushes out a painful pressure wave into your ear every time it stops!!

Has any other company ever developed any proper seek function on short wave or does anyone think that the YB500 actually picks up stations any better than this one does? It doesn't bother with any sort of seek function, preferring to stop every second or so in the hope of picking up at least something!

I think the search function on the newer Chinese radios work OK - but not perfect - and I use them at night in the dark when my XYL is sleeping. I have a Kaito/Degen 1102 which is pretty sensitive and searches OK, and also my Realistic/Sangean DX-398/ATS-909 searches OK. Gotta turn off that beep on the Sangean... but they both work -- Again, not perfect, but acceptable enough to enable searching in total darkness with the dial light off.

Just my take. Works for me, anyway... // Richards //

hey marqueer
why don't you listen to sc & chris and clean up your act?
also, try to rid yourself of the urge to have a penis in your mouth.

Or watch it here:
http://www.youtube.com/watch?v=uqxmPjB0WSs
Then, if you manage to read/watch all that, try this:
http://www.newamericancentury.org/RebuildingAmericasDefenses.pdf
And Molly Ivins had a few choice words to say about it, weeks before:
http://www.truthout.org/docs_2006/092906B.shtml
Here's Chris Floyd: Fatal Vision: The Deeper Evil Behind the Detainee
Bill: http://www.truthout.org/docs_2006/100206A.shtml

"Q: What's the difference between the Vietnam War and the Iraq War?
A: George W. Bush had a plan to get out of the Vietnam War." -- Anon.

Thread where outing begins: http://tinyurl.com/hojf8
George Pickett Memorial Trophy, Special Ops Cody Memorial Purple Heart,

and the Order of the Holey Sockpuppet winner <wfh...@hotmail.com> on
outing personal contact info in x-poasted subject lines:
"Plenty of people post under their real names and do not attempt to
hide
their contact info. You are scared of being 'outed' because you are a
pathological abuser of usenet, and people rightly despise you for it.
You're afraid of being reported to the authorities or, better, visited
by a couple of guys with baseball bats. Other people don't have this
obsessive fear. Ward Hardman himself has posted plenty of personal
information - nothing that anyone else added was hidden in any way.
You're so fucking scared you've built up this whole sick mythology
about
different categories of bad dudes who 'out' scum like you.

"Meanwhile you are the ugliest pigfucker in the universe. You are the
coward without ethics. You call me a 'newbie' - ha! what an asshole you

are. Those who want to remain anonymous do so. There is absolutely no
way you could identify me, not unless you had the sort of subpoena
power
that only gets turned on for big-time terrorists. That's because I
chose
to be anonymous. Some people don't. Only really stupid dicks like you
choose the sort of semi-anonymity which leaves you in constant fear.

"What a dickless wonder you are 'Snarky' you fat asshole."

"I am the only one who has outer filthed Ward" -- James C. "Crackhead"
Cracked voluntarily self-immolates, in MID:
1159678991.838385.310...@m7g2000cwm.googlegroups.com

"When I told Abbie Hoffman that he was the first one who made me laugh
since Lenny Bruce died, Hoffman said, "Really? He was my god." The
combination of satirical irreverence and sense of justice that Bruce
and
Hoffman shared was the real spirit behind the Yippies--a term I coined
to
describe a phenomenon that already existed: an organic coalition of
stoned
hippies and political activists who engaged in such actions as throwing

money on the floor of the New York Stock Exchange, then explaining to
reporters the meaning of that symbolism. Folksinger Phil Ochs summed it

up: "A demonstration should turn you on, not turn you off." So when
journalists link the Yippies with misleading bedfellows, at best it's
careless shorthand; at worst it's deliberate demonization. Osama bin

Laden
wanted an aircraft to crash into the Pentagon. Abbie Hoffman merely
wanted
to levitate it." -- Paul Krassner, http://tinyurl.com/ehu3v

Oh, come on. Admit that you're obsessed with Mark and want him to suck
you
off, Wabbit. I think, in fact, all the repressed gays of rec.radio.*
should accept themselves as gay.

hey marqueer
why don't you listen to sc & chris and clean up your act?
also, try to rid yourself of the urge to have a penis in your mouth.

George Pickett Memorial Trophy, Special Ops Cody Memorial Purple Heart,

and the Order of the Holey Sockpuppet winner <wfh...@hotmail.com> on
outing personal contact info in x-poasted subject lines:
"Plenty of people post under their real names and do not attempt to
hide
their contact info. You are scared of being 'outed' because you are a
pathological abuser of usenet, and people rightly despise you for it.
You're afraid of being reported to the authorities or, better, visited
by a couple of guys with baseball bats. Other people don't have this
obsessive fear. Ward Hardman himself has posted plenty of personal
information - nothing that anyone else added was hidden in any way.
You're so fucking scared you've built up this whole sick mythology
about
different categories of bad dudes who 'out' scum like you.

"Meanwhile you are the ugliest pigfucker in the universe. You are the
coward without ethics. You call me a 'newbie' - ha! what an asshole you

are. Those who want to remain anonymous do so. There is absolutely no
way you could identify me, not unless you had the sort of subpoena
power
that only gets turned on for big-time terrorists. That's because I
chose
to be anonymous. Some people don't. Only really stupid dicks like you
choose the sort of semi-anonymity which leaves you in constant fear.

"What a dickless wonder you are 'Snarky' you fat asshole."

Cracked voluntarily self-immolates, in MID:
1159678991.838385.310...@m7g2000cwm.googlegroups.com

"When I told Abbie Hoffman that he was the first one who made me laugh
since Lenny Bruce died, Hoffman said, "Really? He was my god." The
combination of satirical irreverence and sense of justice that Bruce
and
Hoffman shared was the real spirit behind the Yippies--a term I coined
to
describe a phenomenon that already existed: an organic coalition of
stoned
hippies and political activists who engaged in such actions as throwing

money on the floor of the New York Stock Exchange, then explaining to
reporters the meaning of that symbolism. Folksinger Phil Ochs summed it

up: "A demonstration should turn you on, not turn you off." So when
journalists link the Yippies with misleading bedfellows, at best it's
careless shorthand; at worst it's deliberate demonization. Osama bin
Laden
wanted an aircraft to crash into the Pentagon. Abbie Hoffman merely
wanted
to levitate it." -- Paul Krassner, http://tinyurl.com/ehu3v

Oh, come on. Admit that you're obsessed with Mark and want him to suck
you
off, Wabbit. I think, in fact, all the repressed gays of rec.radio.*
should accept themselves as gay.

hey marqueer
why don't you listen to sc & chris and clean up your act?
also, try to rid yourself of the urge to have a penis in your mouth.

"When I told Abbie Hoffman that he was the first one who made me laugh
since Lenny Bruce died, Hoffman said, "Really? He was my god." The
combination of satirical irreverence and sense of justice that Bruce
and
Hoffman shared was the real spirit behind the Yippies--a term I coined
to
describe a phenomenon that already existed: an organic coalition of
stoned
hippies and political activists who engaged in such actions as throwing

money on the floor of the New York Stock Exchange, then explaining to
reporters the meaning of that symbolism. Folksinger Phil Ochs summed it

up: "A demonstration should turn you on, not turn you off." So when
journalists link the Yippies with misleading bedfellows, at best it's
careless shorthand; at worst it's deliberate demonization. Osama bin

Laden
wanted an aircraft to crash into the Pentagon. Abbie Hoffman merely
wanted
to levitate it." -- Paul Krassner, http://tinyurl.com/ehu3v

http://www.geocities.com\\kb9rqz

one of those private types bigg current ars project in EME hoping to
obtain VUCC and maybe DXCC as a no code tech before the expected R&O
allowign me to become a No Code extra comes through
http://emekb9rqz.blogspot.com/ sadly since certainn folks in the ham
world lack a life beyond harrassing their fellow hams I will no longer
be posting my log on my blog I can be reach by eail off my webpage
I am having to work split so if you see cq kb9rqz+10 it means I am
listening up 10 khz etc

hey marqueer
why don't you listen to sc & chris and clean up your act?
also, try to rid yourself of the urge to have a penis in your mouth.

Oh, come on. Admit that you're obsessed with Mark and want him to suck
you
off, Wabbit. I think, in fact, all the repressed gays of rec.radio.*
should accept themselves as gay.

hey marqueer
why don't you listen to sc & chris and clean up your act?
also, try to rid yourself of the urge to have a penis in your mouth.

Oh, come on. Admit that you're obsessed with Mark and want him to suck
you
off, Wabbit. I think, in fact, all the repressed gays of rec.radio.*
should accept themselves as gay.

This one should provide enough fodder for Mark to post no less than 200
comments this Sunday, none of which will make a lick of sense. Of course,
making sense has never been one of Mark's strong points and he needs a
minimum of "goading" to go on and on and on and on and....well, no more need
be said. You can rest assured that a plethora of misspelled one-liners is
sure to follow.

hey marqueer
why don't you listen to sc & chris and clean up your act?
also, try to rid yourself of the urge to have a penis in your mouth.

"Q: What's the difference between the Vietnam War and the Iraq War?
A: George W. Bush had a plan to get out of the Vietnam War." -- Anon.

Thread where outing begins: http://tinyurl.com/hojf8
George Pickett Memorial Trophy, Special Ops Cody Memorial Purple Heart,

and the Order of the Holey Sockpuppet winner <wfh...@hotmail.com> on
outing personal contact info in x-poasted subject lines:
"Plenty of people post under their real names and do not attempt to
hide
their contact info. You are scared of being 'outed' because you are a
pathological abuser of usenet, and people rightly despise you for it.
You're afraid of being reported to the authorities or, better, visited
by a couple of guys with baseball bats. Other people don't have this
obsessive fear. Ward Hardman himself has posted plenty of personal
information - nothing that anyone else added was hidden in any way.
You're so fucking scared you've built up this whole sick mythology
about
different categories of bad dudes who 'out' scum like you.

"Meanwhile you are the ugliest pigfucker in the universe. You are the
coward without ethics. You call me a 'newbie' - ha! what an asshole you

are. Those who want to remain anonymous do so. There is absolutely no
way you could identify me, not unless you had the sort of subpoena
power
that only gets turned on for big-time terrorists. That's because I
chose
to be anonymous. Some people don't. Only really stupid dicks like you
choose the sort of semi-anonymity which leaves you in constant fear.

"What a dickless wonder you are 'Snarky' you fat asshole."
-- in MID: <1156587081.123977.43...@m79g2000cwm.googlegroups.com>

"I am the only one who has outer filthed Ward" -- James C. "Crackhead"
Cracked voluntarily self-immolates, in MID:
1159678991.838385.310...@m7g2000cwm.googlegroups.com

"When I told Abbie Hoffman that he was the first one who made me laugh
since Lenny Bruce died, Hoffman said, "Really? He was my god." The
combination of satirical irreverence and sense of justice that Bruce
and
Hoffman shared was the real spirit behind the Yippies--a term I coined
to
describe a phenomenon that already existed: an organic coalition of
stoned
hippies and political activists who engaged in such actions as throwing

money on the floor of the New York Stock Exchange, then explaining to
reporters the meaning of that symbolism. Folksinger Phil Ochs summed it

up: "A demonstration should turn you on, not turn you off." So when
journalists link the Yippies with misleading bedfellows, at best it's
careless shorthand; at worst it's deliberate demonization. Osama bin
Laden
wanted an aircraft to crash into the Pentagon. Abbie Hoffman merely
wanted
to levitate it." -- Paul Krassner, http://tinyurl.com/ehu3v

hey marqueer
why don't you listen to sc & chris and clean up your act?
also, try to rid yourself of the urge to have a penis in your mouth.

Oh, come on. Admit that you're obsessed with Mark and want him to suck
you
off, Wabbit. I think, in fact, all the repressed gays of rec.radio.*
should accept themselves as gay.

hey marqueer
why don't you listen to sc & chris and clean up your act?
also, try to rid yourself of the urge to have a penis in your mouth.

Oh, come on. Admit that you're obsessed with Mark and want him to suck
you
off, Wabbit. I think, in fact, all the repressed gays of rec.radio.*
should accept themselves as gay.

hey marqueer
why don't you listen to sc & chris and clean up your act?
also, try to rid yourself of the urge to have a penis in your mouth.

when a transmission is in 12kbps, will it record in 12kbps, or will it convert to 128kbps mp3, so that an sd card holds 10x less ???

2Gb is the max for the morphy richards, how many hours / weeks can be recorded then ???

2.000.000/12 = .. seconds ... ??? = ... hours ??

Hello everyone:

I do not know too much about LPFM. Part of my interest is listening to FM collage noncommercial stations, usually found 88.-92 MHZ. Not sure if these stations qualifies as Low Power FM?

However, I am trying to expand my hobby, and wondering how do I go about giving receiving radio reports to these stations.

Also please let me know where I could find a group of people who are interested in giving radio reports to legal stations.

Thank you.

Does the seek search between 'bands' or is there some way of switching
between bands manually? Also, when you search manually, do you find
stations missed by the seek button? And can it be used with an ear-phone
like the YB400 can't?

Domestic AM/FM/TV stations don't understand SINPO. (heck, most of them have never seen a reception report) Just describe reception in plain text -- "WFAN was fairly loud and easily intelligible with a bit of interference in the background from an Arizona station on the same frequency", something like that.

> if these stations qualifies as Low Power FM?

LPFM is a specific type of license, from a legal standpoint. There are some "regular" FM stations that have less power than a "LPFM" station. (though most have more power) Most LPFMs are in the upper 92-108 band; if I recall properly (and I may not) the FCC tried to discourage LPFMs from operating below 92MHz.

Most college non-commercial stations are *not* LPFM, though there are a few that are.

> However, I am trying to expand my hobby, and wondering how do I go about
> giving receiving radio reports to these stations.

Probably the hardest part is finding a mailing address! (I'd start with the station's website)

- Describe what you heard, in enough detail to prove by a preponderance of the evidence that you heard their station, and not one of the dozens of other stations on the same frequency. "At 8:49AM I heard an ad for Podunk Cleaners, 862-8600; then one for Pet World, 123 East Main St., followed by the George Bush Ford weather forecast". Local commercials are by far the best way to confirm what you heard. National advertisers (McDonalds', Chevy, etc.) could be on *any* station. Most stations don't keep track of what music they've played - if you tell them you heard a Snoop Dogg song at 9:21 on the 25th they have no way of knowing whether they played it at that time of not. Use the station's local time for your report; domestic AM/FM/TV stations don't understand UTC.

- Report the signal quality in text -- "WSCR was weak but plainly readable, with considerable interference from a New York City station on a nearby frequency", something like that.

- Explain why you're reporting, what you want. "If my report proves accurate, written confirmation would be appreciated"

- Enclose a self-addressed stamped envelope. Not strictly necessary for big stations but most smaller stations operate on a shoestring. Even with the big ones the SASE is a sign of respect which they'll likely return unused. (so you can send it to the next station you log)

- Remember that your report is not important to the station's bottom line, and the FCC doesn't require them to respond. Some DXers seem to think the station *owes* them a "QSL"; that kind of listener doesn't do our hobby any good!

- Enjoy!

My AST818 lost the SW and LW mode the FM and the MW work just fine. I had this problem fixed before but it was under warranty I put my signal generator next to the radio and nothing. so I took the radio apart to see if I could see any signs of repair the only spot I see if where a Cap goes (10volt 220Uf) I don't know if this will cause the problem.

Thanks
Eddie

> Interesting write up there Bruce.
> Pity it's not beamed across the Atlantic to South Africa.

John, I would not be surprised if, during some moment of grayline transmission, it might find its way to your antenna...that would be the time to check. I certainly hear Southern Africa on a regular basis, including VOA (Botswana), BBC and of course, the South African radio broadcasts. Is there a gadget that calculates grayline connection times and dates for specific geographical points?

Thanks for this - Note that the Modesto facility listed is officially
closed down and replaced by the SF studio and the Alameda County
transmitter site; the daytime site for KTRB will, hopefully, eventually
be out of Sonoma County to our north, wth its beam aimed southward
toward the central SF Bay Area.

By the way, as of this writing it is Sunday here, half an hour before
noon local time (about 1930Z), and the station continues daytime
testing with annuncements every five minutes.

The idea is to keep that signal away from anything east of California;
they are going for deep nulls in all directions except between about
SSW and NW. This station will be very tough to hear in the midwest.

I did hear another station that frequency the last few days around
twilight (AM and PM), and I think it from the Portland, OR area.

This was it:

KPAM TROUTDALE OR 50000 10000

Troutdale is just east of Portland.

I was having REAL FUN with the CLOWNtesters this weekend all
on HF. Set the rig's tx output to about 10 watts and loaded up
into the 75m carolina windom with DX callsigns and the occasional
rare ITU section. Give em a call and these DX CLOWNTESTERS
would fall all over each other thinkin they just worked a needed
section an they now will be pinchin a loaf waiting for a card to
arrive in the mail to hang on their wall and impress their fatassed ham
club blokes! Baaaaaaaaaaaaaaaa hahahahahahhahaha!!! what a bunch of fools.

The ATS 818 is notorious for popping the fet in the rf amp. You can get
a replacement MPF 102 at Radio Shack. If you Google MPF 102 you will
get lots of discussions on this problem. Eham has 4 pages including
tips on replacing the fet. Good Luck.

Removing the code requirement at this late date would do little to
increase the number of hams applying for a license. At one time,
possibly 30 years ago it would have made sense to replace the code test
with one that emphasizes skills that actually have a use in the real
world. Sadly, I think that there is little that can be done to attract
younger hams into the hobby. There are just too many license-free ways
of communicating with people from around the world.

How would retaining the code requirement help to retain those you do
get. I do not understand.

obviously you do not understand since the opisite was said ending code
tsting could help retain the new hams

I see that you real as well as you spell, which is not very good. I
was responding to the following: "but it can help retain those we get
".

I "real"? indeed I see what you are responding to but you clearly
can't read the sentence since neither of the preceeding poster is
tlaking about reatining code testing
and neither he 2 yet futher in the tree were talking and code testing
```

at all

the only one that thinks the poster are sufggesting code testing will
retain anything is you and where you get is beyond me

When I pick up a collage station, I usually wait until they identify the station. Then I might search on the web for more information.

But keep in mind that sometimes stations share the same frequencies at different times.

Unforcunally, the holy-rollers are in this mixed bag too.

Sometimes I find free format radio stations. It's a lot of fun, you never know what your going to hear. You often hear what commercial stations do not make any money on.

Unlike the shortwave bands, these stations broadcast sessions are much longer.

Here are some of the more common stations in the NYC area.

WSIA, WNYU, WKCR, WHCR, WFUV, WKRB, WFMU, WNYE

SR!

If Slow Code left, I would miss him.

I do not agree with him most of the time. As a matter of fact, he is dead wrong a lot of the time.

At least he stands up for what he believes in.

I myself, do not think that every ham should have to be able to send/copy code at 20wpm no more that I think they should be tested on psk,rtty, slow scan tv. etc.

Some people have a passion for code and some have a passion for other modes. I use them all from time to time, and to be honest, after I move next year, I am going to work on my code a bit more when I have the time to do so.

However, I will still give him a hard time about his ranting. After all I have not heard anyone tell him that he is not a real ham because he does not have psk nailed down..HI HI

Amateur Radio is about much more than "communicating with people from around the world".

Amateur Radio is about LEARNING !!! LEARNING some physics, learning about sunspots, learning about antennas, learning about propagation, learning about some electronics, learning about digital communication techniques, learning about VHF propagation, learning about microwaves, learning about wide band tv systems, learning about narrow band tv systems, learning about ... [you complete the phrase].

If you just want to talk around the world, use CB. If you just want to talk around town, use FRS. If you want to LEARN about radio become an Amateur Radio operator [make a commitment to LEARN].

You forgot the most important part....
How about helping out the rest of the world in emergencies?

After any disaster, the first comunications out of the effected area comes
from hams. NOHA gets a lot of there hurricane information from hams in the
affected area. Sometimes while the ham op is in the middle of it.

When all else fails...we are there!!!!
Been there, done that

Steve,

There is Aircraft on a Freq of 5.649 mhz USB.Planes flying over the atlantic They call in & get a SelCal I think they call it????? from Gander, NewYork, and other land base stations. I think it is called North Atlantic C or NAT-C

I am not sure the selectivity of your receiver but I doubt this is what you are hearing.

Sorry not more help.

I prefer my AK47......Much better gun than the M16 since it will drop a raghead with one shot instead of 5 to 10 from the "16"

Not as accurate from a distance though but since fighting from building to building rareley goes over 100 to 200 yards its more than adequate!

The M16 would be a lot better weapon if the military bought it in .308 (or 7.62) I've seen it advertised as such!

Been there and done that!

Rayburn

IIRC - What was KTRB-AM on 860 kHz out of Modesto, CA
is basically now KMPH-AM on 840 out of Modesto, CA.

Best Rifles in the World are the Garand M-1s.I trained with a Garand M-1 at Fort Gordon,Georgia in 1962.I remember a DI telling/hollering out loud at us lean mean fighting machines that if we lose or damage a Garand M-1,$149.00 (I think he said $149.00,just try to find one nowdays at that price,you can't) will be coming out of our pay checks and we was only being paid $78.00 and pocket change each month.I was issued an M-14 Rifle when I was in Vietnam.

The M-14s and M-16s weren't worth a crap,personally,I don't want one to own for myself.A tree leaf would knock the bullets off target and that lousy gun powder that at first was being used got some of our guys killed because that crappy stuff would make the Rifles jam.

Question - So are we to believe that David Letterman is
actively soliciting people to go out and physically attack
and do bodily harm to Bill O'Reilly ? ? ? ? ? ? ? ? ? ? ?

IMHO - Surely those who openly advocate violence against
other human beings should be subject to psychological
testing and evaluation. Letterman would appear to be a clear
and present danger to all members of society.

How many of the Columbine High School Massacre Killers
had watch the David Letterman Show once or twice ? -or-
were they all frequent watchers of Letterman ?
- - - What about other School Killers ? - Do they watch David
Letterman -and- have they been infuenced by his violent nature ?

Wondering -IF- US Postal Employees who 'watch' Lettermen
are more prone to Violence On-the-Job ?

Is David Letterman more dangerous then Jerry Fallwell ? ? ?

Is an Hour of the David Letterman Show more dangerous
to your child's young psychic then Four Hours of playing
the Grand Thief Auto (GTA) Video Game ?

We already know that Letterman is anti-gay. He banned Richard Simmons from his show after spraying Simmons with a CO2 fire extinguisher to drive him off stage. Simmons was so upset that they had to call an ambulance after the incident.

Simmons was foolish, of course, and let Letterman talk him into doing things like dressing as Cupid and swinging onto the stage from a cable running over to the balcony. That's Letterman's style: Take advantage of Simmons' desire for publicity while openly making fun of Simmons' sexual preference. By extension, Letterman was ridiculing all gay men.

I'll bet that he's afraid of straight guys like O'Reilly who won't let themselves be pushed around. That's probably what was REALLY making Letterman angry.

"When I told Abbie Hoffman that he was the first one who made me laugh since Lenny Bruce died, Hoffman said, "Really? He was my god." The combination of satirical irreverence and sense of justice that Bruce and Hoffman shared was the real spirit behind the Yippies--a term I coined to describe a phenomenon that already existed: an organic coalition of stoned hippies and political activists who engaged in such actions as throwing money on the floor of the New York Stock Exchange, then explaining to reporters the meaning of that symbolism. Folksinger Phil Ochs summed it up: "A demonstration should turn you on, not turn you off." So when journalists link the Yippies with misleading bedfellows, at best it's careless shorthand; at worst it's deliberate demonization. Osama bin Laden wanted an aircraft to crash into the Pentagon. Abbie Hoffman merely wanted to levitate it." -- Paul Krassner, http://tinyurl.com/ehu3v

5826. OK, so I built a (sort of) shielded loop....

Newsgroup: rec.radio.shortwave
Date: 2006-10-30 12:29:36 UTC
From: Brenda Ann <brendad@shinbiro.com>
Message-ID: <ei4r6ognd1@news2.kornet.net>
Source record: 95902

Made from 10' of 1/2" copper tubing and three turns of ~11AWG stranded (insulated) wire). I soldered one end of the coil to the same end of the copper tubing, and connected the ground of a piece of RG-8U coax to that point as well. I connected the center of the coax to the other end of the coil. On the other end of the coax is a PL-259 connector. I attached this to the input of a preselector (I don't have a broadband preamp to use with the loop as yet).

The loop seems to do a better job on AMBCB than it does on SW, though it works on SW as well. The noise level is still substantial, but now it's more like a constant RF garbage than an electrical impulse interference.

I have been able to pull in stations that were previously inaudible. I'll try it during the day on some signals that have always been problematic to impossible, but the nighttime reception is greatly improved. I can get 50dB/S9 on a large number of stations with no noise in the signal at all now, whereas before even the strongest local station has always had some noise. I can obtain a null of between 20-28dB from the loop on AMBCB, but only about 10dB on HF. One of the stations I can get at 50 over is a bigstrap station about 80 miles from me. On 972 KHz and I am told 1.5MW of power, I used to get them on my longwire at about S9- 10dB/S9 depending upon weather conditions. I think I could light a small lamp off the output of the preselector on the station now.. our local 1KW station whose tower is about 2 miles away as the crow flies pushes the meter to 40/S9. I never knew the meter would actually go that high before the AGC cut it off.

The loop looks UGLY.. but it does seem to do a nice job at least on the lower frequencies.

--
Say no to institutionalized interference.
Just say NO to HD/IBOC!

Yes, I'd stumbled across this signal because I was monitoring the comms
on 5649 khz. Kept hearing this weird databurst on a nearby frequency
and it turned out to be on 5652. It stopped not too long after I made
my initial post above. Never was able to get clear enough copy on the
speech to figure out what it was.

> Letterman angry.

It's astounding the amount of fiction that gets passed around. Allow the facts to slip in:

(1) Simmons was dressed as a turkey, not as Cupid. The appearance was 11/22/00.

(2) It was his, Simmons', decision to dress like that, not Dave's.

(3) The reason Dave was pissed at Simmons wasn't the costume, nor that Simmons was allegedly gay, but rather that Simmons kept trying to grab Dave's neck, which suffers chronic pain due to a car accident in the late '80s (the result of whiplash when another car smashed into his from behind). _That's_ what prompted Dave's anger. The same anger he displays toward anyone who approaches his neck (see Terry Bradshaw).

(4) To call Dave "anti-gay" because of the Simmons neck-grabbing incident is priceless. Did you know that one of his Executive Producers is proudly gay, and that Dave announced both her marriage and, most recently, the addition of a baby to her family on the air? Or that Dave's long-time cue-card guy is gay?

It's posts like the above that makes me wonder just where folks are getting their information other than out of their asses.

1. Letterman never even bothered to read O'Reilly's book;

2. Letterman claimed to never have seen O'Reilly's program,

3. Letterman didn't even know who Ansar al-Islam is/was.

Letterman looked like an unprepared, rude and uninformed host, and in fact he was the one whose ass was kicked. He is a typical show-biz, shallow, feel-good liberal who has so much contempt for his adversaries that he totally underestimates them. Even the liberal New York Times called Letterman's performance "embarrassing."

Get over it bitch.

I was speaking about general appearances. Simmons did in fact appear
as Cupid, complete with bow and arrow, at about the time of
Valentine's Day. Read carefully next time. I said "... talk him into
doing things like .."

>
> (2) It was his, Simmons', decision to dress like that, not Dave's.

Simmons would claim that when he thought that the skit was clever, but
Letterman's staff have claimed that the costume choices were a group
effort led by Letterman. After all, there are technical
considerations involved when you arrive suspended in a harness, and it
quite obviously was not a decision that Simmons could make or enforce
by himself.

> (3) The reason Dave was pissed at Simmons wasn't the costume, nor that

Letterman made repeated references to Simmons' "oiled up" body, along with sexual innuendo about Simmons' reasons for being so oily. It was clear to anyone watching that Dave thought Simmons was an object of ridicule and an easy target because of his gay mannerisms.

After Simmons' final appearance, the claim about the neck was a convenient excuse; nothing more.

> (4) To call Dave "anti-gay" because of the Simmons neck-grabbing
> incident is priceless. Did you know that one of his Executive Producers
> is proudly gay, and that Dave announced both her marriage and, most
> recently, the addition of a baby to her family on the air? Or that
> Dave's long-time cue-card guy is gay?

Unimportant. I was talking about Richard Simmons and not about people like Tony Mendez. Letterman literally "used" Simmons for quite some time, and it was in a very abusive way. BTW, you conveniently forgot about the fact that Simmons had an ambulance called immediately after his final "turkey" appearance. Quite obviously, the man was traumatized by the abuse.

> It's posts like the above that makes me wonder just where folks are
> getting their information other than out of their asses.

P.S. There is also some evidence that Tony Mendez quit for a time because Letterman's gay-bashing humor upset Mendez. Apparently, Mr. Mendez was the butt of off-camera jokes that he felt belittled him.

And then there's the whole other subject of Dave raising a bastard son in full public view. Letterman is too selfish to give the kid a name and cares only about Letterman. His show-biz liberal politics seem quite natural for the amoral, selfish person that he obviously is.

I can see why you defend him. He's right up your alley.

Speaking of Letterman rumors, it's my understanding that Dave Letterman
is/has been a SWL and a boatanchor enthusisiast with radios such as a R-390
in his collection.

I do understand the reluctance to discuss such things as they are
dangerously close to being on-topic for this group.

When you accuse Letterman of being "anti-gay" because of the actions of
one singular obnoxious guest, you overgeneralize.
>
> >

I have news for you -- Dave doesn't make costume decisions for his
guests.

>

Well, now you're on to something, though your conclusions are way off
the mark. Yes, Dave has ridiculed Simmons' appearances. Not because
Simmons is allegedly gay, but because Simmons is an obnoxious
man-child.

Nathan Lane is gay, yet he remains one of Dave's favorite guests. Why?
Because he understands the role of a guest -- to entertain both the
host and the host's audience. Simmons lacks this singular quality,
insofar as the Late Show is concerned.

So to declare that Dave is "anti-gay" due solely to his treatment of
one particular, obnoxious, guest, is overwrought with error.

The Letterman/Simmons animosity wasn't always so; Letterman and Simmons
taped a remote in New Jersey back in the mid-90s, and Simmons fetched a
Thanksgiving pie from Dave's mom and delivered it personally on the
show.

>
> After Simmons' final appearance, the claim about the neck was a
> convenient excuse; nothing more.

You're factually wrong about that. Ask Terry Bradshaw why he hasn't
been invited back on the show after he manhandled Dave's neck.

>

No, you claimed that Letterman was "anti-gay" and used Simmons as the
reason what-for.

> Letterman literally "used" Simmons for quite some
> time, and it was in a very abusive way. BTW, you conveniently forgot
> about the fact that Simmons had an ambulance called immediately after

Boo-hoo. Had Simmons not grabbed Dave's neck, there would have been no
"traumatized" excuse to allegedly call an ambulance.
>

You're once again pulling stuff out of your ass again. I know Tony.
I've spent many hours talking to him. Tony never quit for _any_ time
over _any_ alleged gay-bashing humor from Dave.

>

Are you referring to Harry, Dave's near-3-year-old? The child who Dave
talks about frequently, always by name, and shows photos, as any proud
dad would?

Really, return to reality.

It was back in 2003 and was quickly hushed up. The only authoritative
reference I could find on short notice was the following MyWay story:

"Earlier this week, published reports said that David Letterman's cue
card guy Tony Mendez (known to viewers as "Big Ink") quit CBS's Late
Show for personal reasons. Well, the dude apparently changed his mind,
because now we hear that he's staying. Apparently, someone reminded
him that he gets paid to hold poster board." --
http://entertainment.myway.com/celebgossip/tvgnews/id/04_10_2003.html#10

The "personal reasons" were alleged by other newspapers to be anger
over Letterman's off-camera jokes about him.

> >
> > And then there's the whole other subject of Dave raising a bastard son

Well, let's see: A child born out of wedlock has been referred to as
a "bastard" for centuries. In fact, that's still the legal term for
Letterman's situation (http://www.genfiles.com/legal/legalterms.htm).

> > I can see why you defend him. He's right up your alley.
>
> I'm sorry -- what in heavens are you claiming now?

I'm suggesting that the moral relativism of show-biz liberals such as
Letterman makes it easy for them to brush off any notion that certain
moral responsibilites come with parenthood -- one of which is to give
your child the benefits of being the offspring of a legal union.
Among those benefits is the avoidance of in fact being legally a

bastard. Dave has chosen not to do that, and someday his bastard son will become aware of it. Think he'll thank Daddy for that?

It seems to me that Letterman is confused about a lot of things. It seems to me that you are too.

I can tell you with authority that the only accurate detail in these
"published reports" was the spelling of Tony's name. As to what
actually happened has no resemblence to what you cited. No, Tony didn't
quit over any "off-camera jokes" about him by Dave.

What you cited is far from an "authoritative reference."

And no, I won't go into confidential details, other than to point out
the inconvenient fact that Dave wasn't even in the offices when Tony
left, then returned, to the show (Dave was home, recovering from
shingles then). Dave had utterly nothing to do with the events
surrounding Tony.

When you earlier claimed that "Letterman is too selfish to give the kid
a name," I mistakenly concluded that you were referring to some
fictitious human being, rather than the person widely spoken of by Dave
as "Harry." You might consider actually watching the show sometime
before broadcasting such ignorance.

> > > I can see why you defend him. He's right up your alley.

Oh my; I don't know where to begin with this onslaught of moral
depravity about someone you've never met. Suffice to say that it's
comical to read such pompous certitudes.

>
> It seems to me that Letterman is confused about a lot of things. It
> seems to me that you are too.

Argue the facts, not the person. To tag Dave as a "show-biz liberal"
betrays even more ignorance of such mammoth proportions as to Dave's
political leanings, as well as his "show-biz" persona as to shake one's
head in disbelief.

I agree - learning something about amateur radio is a requirement for
passing the test. The real question is what kinds of knowlege about
amateur radio should be required of prospective hams before giving them
a license. It would seem to me that testing a prospective ham for
knowlege of how radios operate, how to set up a station properly and
how to operate the equipment safely would be a primary concern. Next
the ham should be able to demonstrate an ability to use the equipment
to communicate in an efficient and courteous manner in a mode that is
widely used. Voice is hands down the most frequently used mode of
communication. Additionally, a knowlege of how to communicate via
radio using voice would be a big help when trying to make contact
during an emergency with professional rescue groups. Having the
prospective ham learn morse code would not provide him with a skill
that has any real world use.

I do wish that Letterman had been more familiar with this third canard
in order to adequately refute Baxter's false claim re sypathetic ties
between it and Saddam:

http://en.wikipedia.org/wiki/Ansar_al-Islam

re: United States Senate Select Committee on Intelligence

"The report concluded that "Postwar information reveals that Baghdad
viewed Ansar al-Islam as a threat to the regime and that the IIS
attempted to collect intelligence on the group." (page 110)"

Sounds interesting but I'm a bit confused, did you make one turn of
piping of around 3 ft diameter and then couple to that with 3 turns
of insulated wire and thence to the coax?

Charlie.

I haven's watched Letterman and Leno ever since I got cable tv and then
I dumped cable tv for DirecTV.I do enjoy reading Leno's auto articles in
Popular Mechanics magazines.Well,once in a while,if I think about it,
(and 99 times out of 99 and a half,I never think about it) I might tune
in Leno's tv show for the first few minutes to catch his first few
jokes,then I hit my remote and I head on over to some other tv channel.

Hering it here rather weakly but peaking up to S-7 at times in Northern
Wisconsin. R-5000 with 200ft loop.

I thought all this numbers nonsense ended a few years ago. (?).

5868. The Crystal Ship

Newsgroup: rec.radio.shortwave
Date: 2006-10-30 22:35:46 UTC
From: dxAce <dxAce@milestones.com>
Message-ID: <45467E42.E484E0A3@milestones.com>
Source record: 95944

Greetings, Ghoulish Pirate DXers!

The Crystal Ship is taking to the airwaves this (Monday) evening, on or about
6875 kHz and 3275 kHz, commencing around 2230 UTC.

We will have the Johnson Viking Valiants running in parallel this evening... presuming nothing goes wrong. (Hopefully I don't trip over the drop cord this time.... can't run both those gals on one circuit).

This will be Halloween programming. I figure a lot of people will be busy tomorrow evening with the Halloween stuff, especially if you have kids, so we're on tonight. May do something tomorrow too, who knows, but won't bother Emailing about it tomorrow. If you miss us and have the time tomorrow night, check the FRN grapevines website (link below) program announcements section. We often post there when we don't Email, and we often don't Email since I don't want to fill up people's mailboxes too much....

5869. Canadian Coast Guard comms

Newsgroup: rec.radio.shortwave
Date: 2006-10-30 22:36:42 UTC
From: Steve <sdaniel13@speakeasy.net>
Message-ID: <1162247802.183937.102470@i42g2000cwa.googlegroups.com>
Source record: 95945

About ten minutes ago I heard some Canadian Coast Guard comms on 5717 khz. Some sort of craft--don't know if it's a boat or a plane--is on its way to the site of some unfortunate 'event' somewhere. That's all I heard as I only caught the tail end of the conversation. I bet there'll be more activity on this frequency later though.

Steve

5870. Pirate - 3274.7

Newsgroup: rec.radio.shortwave
Date: 2006-10-30 22:39:36 UTC
From: dxAce <dxAce@milestones.com>
Message-ID: <45467F28.EB2D737F@milestones.com>
Source record: 95946

The Crystal Ship 3274.7 heard here at 2237 with a good signal.

3 turns of wire INSIDE the copper tubing. Basically, it's like a big 3 turn
coil with a copper shield. The sheild is grounded only on one end.

Brenda:
Why not check out the WL1030 (www.wl1030.com) home page. I built one of
these
and it was the clear equal to the ballyhooed Wellbrook ALA 1530 that I
owned for
a couple of weeks. I am not a big fan of loops, and I have found them
to be way
over rated, but many people swear by and love loops. The one difference
between
my WL1030 and the orignal design was the substitution of other wires

for the actual
loop. I just couldn't find 6mm^2 Litz wire. Wire size didn't appear to have much, if
any, effect on performance. The WL1030 has very high IP2 and IP3, much higher then
I could measure.

At the very least you owe it to yourself to check it out. Pretty simple and very roubust.
Should be fairly inexpensive to boot. The null was about like the ALA 1530. At my
location I was pleased to be able to receive WWVB (60KHz) well enough for a clock
to maintain constant lock.

It is possible the ALA 1530 that I owned was defective. The guy I traded it to loves it.
He lives in a downtown Lexington Condo up a hihger floor. I think I now know what
RF hell really looks like. Perhaps my location is quite enough that a quite loop is of no benifit. The Datong AD370?, the unit designed for exterior use, is a better, for me, antenna.

A friend, Will, built a Betts Preselector from plans at RHFs yahoo antenna group and it is a very nice unit. Pretty simple and works very well.

On tonight's (Oct 30) Factor, O'Reilly played a tape of the Thursday night Late Show in which Letterman was telling Paul Shaffer that he caught O'Reilly in a lie during O'Reilly's January appearance on the show.

Tonight, O'Reilly demanded an apology from Letterman, saying that there was no lie and that Letterman made the accusation when O'Reilly couldn't possibly defend himself. O'Reilly said that, if Letterman is a man, he'll apologize.

I love it! With blowhards like those in action, I'll have an endless supply of material.

All kinds of whacky ham antenna stuff out there on the internet.

Electrically small antennas, certainly the broadband non-tunable ones
are not efficient, which means you don't want to use them unless the
situation requires it.

Conservatives, on the other hand, always like to parade around actors
and other personalities (i.e. entertainers like Rush Limbaugh; satirists
like Ann Coulter) as societal and political experts, then get them
elected as President (Reagan) or Governor (Reagan/Schwartzenegger). The
simple-minded TV viewers that get their one hour of Faux-news and
right-wing talk radio are easily fooled and brainwashed.

That's why there's still people voting for republicans.

Yes, it does work both ways!

Hi John...

For the sake of discussion and curiosity....

Have you ever owned or used one of these radios?

He really has a nice setup and should probably keep it. If the radio is AC only, why not buy a good quality inverter for it. He already has it setup in a portable case.

Also... I read somewhere that you had gotten really good results from your Redsun 2100. The radio was rated fairly low in Passport to Worldband Radio (PWB). I trust your input and consider you somewhat of an authority on SW listening. I also consider you a serious DX'er. Do you think that your radio is just an unusually well put together unit or was PWB just a little harsh on the 2100? I do like the way the radio is layed out.

Thanks...

Hi Mike,
No I never laid eyes on a Ten Tec RX340 but a couple of my serious DX mates had them but sold them on after a while. Apparently the IP3 is not so good, so when you DX the MW band with the 9/10 khz splits the splatter comes through.

The seller now uses a portable laptop PC and DX's with a Winradio G313E which he loves. There is also the question of the Ten Tec's size and weight, so carting it around to the many DXpeditions they go on, is a bit of a chore.
There are many other very happy owners of the RX340 which swear by it and love it to death.

I am still waiting with foetid breath for the arrival of my copy of Passport 2007 and will see what it says about the Redsun RP2100 when it arrives. I don't DX with it as I use my big Icom for that, but as it is my portable about the house for listening to BBC and my local difficult to get AM MW station, I am very happy with it and am very glad I can now run it directly off my AC mains, a big saving on batteries for me. It's way ahead of my Sangean ATS818 which I have now sold on. The sound is lovely and for about $100 I think it is great value for money.

As for Passport and it's reviews, I generally like them and find them honest, but I don't always agree with them. For instance they originally knocked my RF Systems DX1 Pro antenna into the ground, although they later uprated the review. They plug the Wellbrook loops, but a couple of my mates have the ALA1530 and they don't get the results I get from my superb DX1.

Thanks for your kind comments

Another alternative is to build your own loop but use it with the
Wellbrook ALA100.

5907. Re: Wellbrook Shielded?

I think it was Seein-I-Dawg who commented about the Wellbrook ALA-1530
being shielded....

As far as I can tell, having looked at their site several times,
Wellbrook makes no such claims and points to the loop configuration as
the reason why it rejects some near field RFI. This is also born out
by the fact that they also sell an Indoor version of the antenna which
is packaged in a sort of plastic hula hoop, rather than in Aluminum
tubing. Wellbrook does make a very nice preamp and I suspect that the
ALA-100 WILL outperform the ALA-1530 and the ALA-330s with 50 feet of
wire on it. (I currently have an ALA-1530 and hope to have an ALA-100
shortly so I'll let you know.)

I tape the Late Show every night for viewing the next day. When I went back and looked at my tapes, I discovered that O'Reilly's people are manufacturing a false story. I don't like to think that O'Reilly himself is involved.

The tape of the Thursday program shows that Letterman was joking with Shaffer about catching O'Reilly in a lie. O'Reilly's people cut off the video clip before it became evident that the comment was just another of Letterman's odd jokes -- much like his jokes about the 7/11 Store CEO.

As a result, I think that it is O'Reilly who owes Letterman an apology. In addition, the person at FNN who purposely edited the tape to misrepresent the truth should be fired.

Fair and balanced, my ass.

: Roger didn't go to DeVry, dumbass, unlike you he went to a REAL college.
:
: Plagiarizing again, Stanley? Poor Stanley.

You didn't read the rot13 message that I left for you in the previous
post. If you had, you would have realized that the isotropic power
calculation was done by Lloyd Davies, and I gave him full credit for
it. He values his privacy, and has requested that I use rot13 in any
attribution which references one of his engineering calculations.

That explosion at your house must still be having after effects,
because you seem to be confused. I'm not Dave Heil, and I'm not Stan
Lawson either.

Hmmmm. Stan Lawson. Who might he be? It looks as though you might
be referring to the owner of the Adolph Hitler web site at
http://www.adolfhitler.ws. Why in the world would you be visiting
Nazi web sites, Woger? Did those skinheads who allegedly visited you
brainwash you somehow?

==========
"Roger's background does have International affairs in it. Too bad."

All the SDR-1000 reviews you can handle

http://www.flex-radio.com/News.aspx?topic=publications
http://www.eham.net/reviews/detail/4108
http://www.flex-radio.com/Users.aspx?topic=testimonials

World's Best Narrow Spaced Dynamic Range

99dB of two-tone, third order dynamic range and +26dBm IP3 at 2 KHz spacing (14 MHz, 500 Hz bandwidth, Medium Preamp Setting, M-Audio Delta 44 sound card) make the SDR-1000T the best performing narrow-spaced radio on the amateur radio market today. Closely spaced two-tone third order dynamic range, combined with extremely low local oscillator phase noise is the primary factor that determines the performance of modern receivers. The SDR-1000T incorporates a novel Quadrature Sampling Detector (QSD) that offers significantly higher dynamic range than traditional mixers. Further, by using a single conversion from RF to audio frequencies, other sources of nonlinearity are eliminated as compared to multi-conversion receivers. The SDR-1000T also uses a very low phase noise oscillator and direct digital synthesizer (DDS) to minimize reciprocal mixing with large adjacent signals. This means that you can work the weak signals in the presence of nearby strong signals.

You have 2 baseline options when purchasing an SDR-1000:

1 Watt Software Defined Transceiver - Fully Assembled/Tested
100 Watt Software Defined Transceiver - Fully Assembled/Tested

Forget the Analog Tunning and cost on the SR III or the LCD display and short wave on the Grundig, Simply put, Which of these radios performs better on AM? Hopefully someone here has had both of these radios to compare. Thanks.

The Voice of Germany has really cut back on their tranmissions to North America. Their current schedule, effective October 29, 2006, shows 13 transmissions (four in English and 9 in German) as compared to the previous transmissions which was 24 (six in English and 20 in German).

Both radios have serious quality-control problems - they both are very
cheap construction, and from experience, the S350 is just total junk.
The S350 is analog tuned and still drifts despite a kludged lock
mechanism, cheap switches, plastic speaker grill, smelly imitation
leather handle, low-resolution display, and is no better a DX'er than
my better-quality Radio Shack $25 PLL AM/FM radio. All this talk about
"DX machines" is just hype. I'll never buy an analog-tuned radio again !
